The department offers a Major in Materials Engineering leading to an accredited B.Eng. degree in Materials Engineering. Materials are used to enact every human technology and have shaped key eras in history. Major in Materials Engineering students will have the opportunity to learn the fundamental science and engineering of materials through the materials processing pipeline, including how to enrich mineral-poor ore, how to process the materials into the desired microstructures and compositions, and how to use these materials in various applications (aerospace, electronics, and biological systems). With the choice of technical complementary courses, students have an opportunity to specialize and strengthen key materials technologies or broaden their horizons and take courses from several interdisciplinary areas.

Students entering this program must plan their schedule of studies in consultation with a departmental advisor.

Required Year 0 (Freshman) Courses (29 credits)

Generally, students admitted to Engineering from Quebec CEGEPs are granted transfer credit for these Year 0 (Freshman) courses and enter a 119-credit program.

For information on transfer credit for French Baccalaureate, International Baccalaureate exams, Advanced Placement exams, Advanced Levels, and Science Placement Exams, see <http://www.mcgill.ca/engineering/current-students/undergraduate/new-stud...> and select your term of admission.

Mining Engineering (B.Eng.) (144 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)
Degree: Bachelor of Engineering

Program credit weight: 144 credits

Program Description

Enrolment in this program is subject to departmental approval, please consult with an Academic Advisor within the appropriate program further to discuss your suitability in this program.

The Department offers a Major in Mining Engineering Program leading to an accredited B.Eng. degree in Mining Engineering. The program focuses on the science and engineering of sustainable extraction of mineral resources. It contains two streams: English for non-CEGEP students and Bilingual (six courses in French) for CEGEP students, in collaboration with the mining engineering program at Polytechnique Montreal. The program includes projects that are reinforced by field trips to industrial operations.

B.Eng.; Major in Mining Engineering

Program credit weight: 144-145 credits

Program credit weight for CEGEP students: 115-116 credits

Entry into the Major in Mining Engineering

Students in Mining can be admitted only into the B.Eng.; Co-op in Mining Engineering. There is no direct entry to the Major in Mining Engineering (which does not include the work terms required for the Co-op program).

Students may enter the Major in Mining Engineering if they wish at any point in time during their study. To transfer into the Major program, students must obtain approval from the department adviser and submit a Request for Course Authorization form to the McGill Engineering Student Centre (Frank Dawson Adams, Room 22).

Required Year 0 (Freshman) Courses (29 credits)

Generally, students admitted to Engineering from Quebec CEGEPs are granted transfer credit for these Year 0 (Freshman) courses and enter a 115- to 116-credit program.

Co-op in Mining Engineering (B.Eng.) (150 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 150 credits

Program Description

Program credit weight: 150-151 credits

Program credit weight for Quebec CEGEP students: 121-122 credits

The Department offers a Co-op in Mining Engineering Program leading to an accredited B.Eng. degree in Mining Engineering. The program focuses on the science and engineering of sustainable extraction of mineral resources. It contains two streams: English for non-CEGEP students and Bilingual (six courses in French) for CEGEP students, in collaboration with the mining engineering program at Polytechnique Montreal. The program includes projects that are reinforced by field trips to industrial operations as well as three industrial work terms. Students must register for each work term (MIME 290 Industrial Work Period 1., MIME 291 Industrial Work Period 2., MIME 392 Industrial Work Period 3.) and pay associated fees by the Course Change (add/drop) registration deadline. Before registering for any work term course, students must contact the Mining Co-op Liaison Officer for approval.

Required Year 0 (Freshman) Courses (29 credits)

Generally, students admitted to Engineering from Quebec CEGEPs are granted transfer credit for these Year 0 (Freshman) courses and enter a 121- to 123-credit program.

For information on transfer credit for French Baccalaureate, International Baccalaureate exams, Advanced Placement exams, Advanced Levels, and Science Placement Exams, see <http://www.mcgill.ca/engineering/current-students/undergraduate/new-stud...> and select your term of admission.

Aerospace Engineering Minor (B.Eng.) (21 credits)

Offered by: Institute for Aerospace Eng. (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 21

Program Description

The B.Eng.; Minor in Aerospace Engineering provides a foundation in the field of aircraft and spacecraft design, with further specializations in aerodynamics and propulsion, structural analysis, materials and processes, spacecraft engineering and systems, and avionics by choosing an appropriate stream.

A maximum of 9 credits of double-counting is allowed with the Major.

Required Courses (9 credits)

Arts Minor (B.Eng.) (24 credits)

Offered by: Engineering - Dean's Office (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 24

Program Description

Minor Adviser: Faculty Student Adviser in the Engineering Student Centre (Frank Dawson Adams Building, Room 22)

B.Sc.(Arch.), and B.Eng., students may obtain the Arts Minor as part of their B.Eng., or B.Sc.(Arch.) degree by completing 24 credits, as described below.

Students must select courses for this Minor in consultation with one of the Advisers indicated above.

All courses in the Minor must be passed with a grade of C or better.

Requirements

24 credits as follows:

1. At least two areas of concentration in the Faculty of Arts must be chosen, with a minimum of 6 credits in any one area.
2. At least 12 credits must be at the 300 level or higher.

In general, B.Eng. students may use courses from the Complementary Studies lists (Group A and Group B) in their program that are offered by the Faculty of Arts to satisfy some of these requirements. No more than 9 credits of these courses can be credited toward the Arts Minor.

Biomedical Engineering Minor (B.Eng.) (21 credits)

Offered by: Biomedical Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 21

Program Description

Biomedical engineering can be defined as the application of engineering principles to medicine and the life sciences. Students in the Biomedical Engineering Minor take courses in life sciences (anatomy, biology, chemistry, and physiology) and choose courses from area(s) within the field of biomedicine (artificial cells and organs; bioinformatics, genomics, and proteomics; biomaterials, biosensors, and nanotechnology; biomechanics and prosthetics; medical physics and imaging; neural systems and biosignal processing).

Note: Open to students in the Faculty of Engineering and the Department of Bioresource Engineering.

The Biomedical Engineering Minor allows access to courses in basic life sciences and it intended to expose students to the interdisciplinary tools used in biomedicine.

To complete this Minor, students must obtain a grade of C or better in all approved courses and satisfy the requirements of both the major program and the Minor. By careful selection of courses, the Minor can be satisfied with 9 additional credits in the student's major program or a maximum of 12 credits overlap with the major program.

Students considering this Minor should contact the Minor Advisers listed above.

Minor Advisers: Prof. R. Leask (Wong Building, Room 4120), Prof. R. Mongrain (Macdonald Engineering Building, Room 369) or Prof. G. Mitsis (McConnell Engineering Building, Room 361).

Complementary Courses (21-25 credits)

Introductory Life Sciences

Minimum of 3 credits from the courses below:

Expand allContract all

Course	Title	Credits
ANAT 212	Molecular Mechanisms of Cell Function. ¹	3
BIEN 219	Introduction to Physical Molecular and Cell Biology. ²	4
BIOC 212	Molecular Mechanisms of Cell Function. ¹	3
BIOL 200	Molecular Biology. ¹	3
BIOL 201	Cell Biology and Metabolism. ¹	3

Biotechnology Minor (for Engineering Students) (B.Eng.) (24 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Engineering

Program credit weight: 24

Program Description

Minor Adviser: Faculty Student Adviser in the McGill Engineering Student Centre (Student Affairs Office) (Frank Dawson Adams Building, Room 22). For advising regarding Science courses, contact Nancy Nelson, Undergraduate Adviser, Department of Biology, Faculty of Science.

This Minor is offered by the Faculty of Engineering and the Faculty of Science for students who wish to take biotechnology courses that are complementary to their area. It has been designed specifically for Chemical Engineering students; other Engineering students who are interested in the Minor should contact a Faculty Student Adviser in the McGill Engineering Student Centre (Student Affairs Office) (Frank Dawson Adams Building, Room 22).

To obtain the Biotechnology Minor, students must complete 24 credits, 18 of which must be exclusively for the Minor. Approved substitutions must be made for any of the required courses that are part of the student's major program.

The Department of Chemical Engineering permits students taking this Minor to complete BIOT 505 Selected Topics in Biotechnology, as one of their technical complementary courses. Chemical Engineering students complete 15 credits beyond their 141-credit (115-credit for CEGEP students) B.Eng. program to obtain this Minor.

Required Courses (12 credits)

Computer Science Minor (B.Eng.) (26 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Engineering

Program credit weight: 26

Program Description

24-26 credits

This program gives students in Engineering an introduction to core computer science concepts. The Minor is open to B.Eng. and B.Sc. (Arch.) students in Engineering who have already taken ECSE 202 Introduction to Software Development., COMP 202 Foundations of Programming., or COMP 208 Computer Programming for Physical Sciences and Engineering .. This program is not open to students in the B.Eng.; Co-op in Software Engineering program. All courses in the Minor must be passed with a grade of C or better. The Minor program may be completed in 24-26 credits, of which no more than 6 credits may overlap with the primary program. Students who are interested in this Minor should consult with the Undergraduate Program Coordinator in the School of Computer Science for administrative matters, and should consult with both the Minor Adviser in Computer Science and with their department adviser for approval of their course selection. Forms must be submitted and approved before the end of the drop/add period of the student's final term

Required Courses (3 credits)

COMP courses at the 300 level or above except COMP 396 Undergraduate Research Project., COMP 400 Project in Computer Science.

It is strongly recommended that students take COMP 251 Algorithms and Data Structures., as it is a prerequisite of many later computer science courses.

Construction Engineering and Management Minor (B.Eng.) (24 credits)

Offered by: Civil Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 24

Program Description

This Minor covers construction project management, law related to construction, labour-management relations, financial accounting and

project finance, in addition to topics in other construction-related fields, architecture or mining engineering.

All courses in the Minor must be passed with a grade of C or better.

A maximum of 12 credits of coursework in the student's major may double-count with the Minor.

Minor Adviser: Prof. L. Chouinard, Macdonald Engineering Building, Room 491 (Telephone: 514-398-6446)

Minor program credit weight: 24 credits

Note: This Minor is particularly designed for Civil Engineering students, but is open to all B.Eng. and B.Sc.(Arch.) students.

All courses in the Minor must be passed with a grade of C or better.

Economics Minor (B.Eng.) (18 credits)

Offered by: Economics (Faculty of Arts)

Degree: Bachelor of Engineering

Program credit weight: 18

Program Description

The B.Eng.; Minor in Economics focuses on such economic topics as: how societies decide what to produce, how much of it, what determines prices, exchange rates, interest rates, and levels of inflation. How economies function internally and on a global scale, what drives consumers, and how public policy and global events affect markets. A maximum of 9 credits of coursework in the student's major may be double counted with the Minor.

Required Courses (18 credits)

6 credits from the following:

² Note: Only open to Mining and Materials Engineering students.

Environmental Engineering Minor (B.Eng.) (21 credits)

Offered by: Civil Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 21

Program Description

The Minor program is designed to focus on the principles of environmental engineering in all engineering disciplines providing a specialization at the undergraduate level.

The Environmental Engineering Minor is offered by the Department of Civil Engineering for all students in Engineering and in the Department of Bioresource Engineering wishing to pursue studies in this area.

Note: Not all courses listed are offered every year. Students should see the "Courses" section of this Course Catalogue to know if a course is offered.

A maximum of 12 credits of coursework in the student's major may be double-counted with the Minor.

Complementary Courses (21-22 credits)

3-4 credits from the following list:

Expand allContract all

18 credits from Stream A or Stream B:

Stream A

15 credits from the Engineering Course List and 3 credits from the Non-Engineering Course List below

¹ A minimum of 6 credits must be from outside the student's department. A maximum of 6 credits of research project courses may be counted toward this category, provided the project has sufficient environmental engineering content (project requires approval of project supervisor and coordinator of the Minor).

Stream B

9 credits of courses specified from the "Barbados Interdisciplinary Tropical Studies (BITS)" field semester below, provided the project has sufficient environmental engineering content (project requires approval of the Coordinator of the Minor):

Management (for Non-Management Students) (Minor) (18 credits)

Offered by: Management (Desautels Faculty of Management)
Program credit weight: 18

Program Description

The Minor Management consists of 18 credits of Management courses and is currently offered to non-Management students in the following Faculties: Arts, Engineering, Science, Agricultural & Environmental Sciences, Music, Religious Studies, and Kinesiology.

This Minor is designed to provide non-management students with the opportunity to obtain basic knowledge in various aspects of management.

Complementary Courses (18 credits)

9 credits selected from:

Expand allContract all			
Course	Title	Credits	
MGCR 211	Introduction to Financial Accounting.	3	
MGCR 222	Introduction to Organizational Behaviour.	3	

MGCR 271	Business Statistics. ¹	3	1 Students choose either CHEE 380 Materials Science. or MIME 260 Materials Science and Engineering..
MGCR 293	Managerial Economics. ²	3	
MGCR 331	Information Technology Management . ³	3	
MGCR 341	Introduction to Finance.	3	
MGCR 352	Principles of Marketing. ³	3	
MGCR 372	Operations Management.	3	
MGCR 382	International Business.	3	

- ¹ 3 credits of statistics: Students who have taken an equivalent Statistics course in another faculty may not count those credits towards the Minor; an additional 3-credit complementary course must be chosen from the course list above.
- ² Students who have taken an equivalent Economics course in another faculty may not count those credits toward the Minor; an additional 3-credit complementary course must be chosen from the course list above.
- ³ Prerequisite: MGCR 271, Business Statistics, or another equivalent Statistics course approved by the Program Advisor.

9 credits selected from any Management courses not already chosen from the first list or any 300- or 400-level Management courses for which prerequisites have been met.

Note: Students should select their Statistics course only after consulting the "Course Overlap" section in the Faculty of Arts, the "Course Overlap" section in the Faculty of Science, and the "Course Overlap" section in the Desautels Faculty of Management to avoid overlapping Statistics courses.

Materials Engineering Minor (B.Eng.) (24 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 24

Program Description

Minor Adviser: Prof. Richard Chromik (Minor Coordinator), Wong Building, Room 2620

Engineering students may obtain a Materials Engineering Minor by completing 24 credits chosen from the required and complementary courses listed below. By a careful selection of complementary courses, Engineering students may obtain this Minor with a minimum of 15 additional credits.

Required Courses (15 credits)

Expand allContract all			
Course	Title	Credits	
CHEE 380	Materials Science. ¹	3	
CHEE 484	Materials Engineering. ¹	3	
MIME 260	Materials Science and Engineering. ¹	3	
MIME 345	Applications of Polymers.	3	
MIME 465	Metallic and Ceramic Powders Processing.	3	
MIME 467	Electronic Properties of Materials.	3	

Complementary Courses

9 credits from the following:

Course	Title	Credits
MECH 530	Mechanics of Composite Materials.	3
MIME 360	Phase Transformations: Solids.	3
MIME 512	Corrosion and Degradation of Materials.	3
MIME 560	Joining Processes.	3
MIME 561	Advanced Materials Design.	3
MIME 563	Hot Deformation of Metals.	3
MIME 569	Electron Beam Analysis of Materials.	3

Mathematics Minor (B.Eng.) (18 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Engineering

Program credit weight: 18

Program Description

The B.Eng.; Minor in Mathematics provides students with an even stronger foundation in mathematics to further develop their knowledge of this subject. Students enrolled in the B.Eng.; Minor in Mathematics complete a series of mathematics courses offered by the Department of Mathematics and Statistics, or other units offering mathematics courses.

Minor Adviser: Faculty Student Adviser in the McGill Engineering Student Centre (Student Affairs Office) (Frank Dawson Adams Building, Room 22) AND an adviser designated by the Department of Mathematics and Statistics. (Please consult the Department of Mathematics and Statistics for the name of this adviser.) Selection of courses must be undertaken in conjunction with the Minor Advisers, normally beginning in the U2 year.

Note: The B.Eng.; Minor in Mathematics is open to all students in the Faculty of Engineering (including students registered in the B.Sc. (Arch.)). A maximum of 9 credits of overlap (double-counting) with the degree program is allowed.

Engineering students must obtain a grade of C or better in courses approved for this Minor.

Required Course (3 credits)

Expand allContract all			
Course	Title	Credits	
MATH 242	Analysis 1.	3	

Complementary Courses (15 credits)

3 credits selected from:

Course	Title	Credits
MATH 223	Linear Algebra.	3
MATH 247	Honours Applied Linear Algebra.	3

6-12 credits selected from:

Expand allContract all

Course	Title	Credits
ECSE 205	Probability and Statistics for Engineers ¹	3
MATH 204	Principles of Statistics 2.	3
MATH 240	Discrete Structures.	3
MATH 243	Analysis 2.	3
MATH 264	Advanced Calculus for Engineers.	3
MATH 271	Linear Algebra and Partial Differential Equations.	3
MATH 316	Complex Variables.	3
MATH 319	Partial Differential Equations . ²	3
MATH 323	Probability. ¹	3
MATH 324	Statistics. ¹	3
MATH 326	Nonlinear Dynamics and Chaos.	3
MATH 340	Discrete Mathematics.	3
MATH 378	Nonlinear Optimization .	3
MATH 417	Linear Optimization.	3
MATH 427	Statistical Quality Control.	3
MATH 447	Introduction to Stochastic Processes.	3
MATH 463	Convex Optimization.	3
MATH 475	Honours Partial Differential Equations.	3
MATH 478	Computational Methods in Applied Mathematics .	3
MATH 563	Honours Convex Optimization .	4

¹ Students who take ECSE 205 Probability and Statistics for Engineers may not take MATH 323 Probability. or MATH 324 Statistics..

² Students may take MATH 271 Linear Algebra and Partial Differential Equations. or MATH 319 Partial Differential Equations . but not both.

0-6 credits chosen from (200- to 500-level) Mathematics and Statistics courses approved for the B.Sc. Major Mathematics or B.Sc. Honours Mathematics programs, or from mathematics courses offered in other units. The courses in this category must be chosen in consultation with, and approved by, the Minor Adviser from the Department of Mathematics and Statistics.

Note: MATH 262 Intermediate Calculus., MATH 263 Ordinary Differential Equations for Engineers. (or any course with substantial overlap in content with these two courses) and/or MATH 338 History and Philosophy of Mathematics. cannot be credited towards this minor.

Mining Engineering Minor (B.Eng.) (23 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 23

Program Description

Program credit weight: 23-25 credits

The Mining Engineering Minor covers fundamentals of mineral exploration, ore extraction, and mineral processing. The program includes an experiential learning component through an industrial work term for which enrolment may be limited.

Required Courses (17 credits)

Expand allContract all

Course	Title	Credits
MIME 200	Introduction to the Minerals Industry.	3
MIME 291	Industrial Work Period 2.	2

Nanotechnology Minor (B.Eng.) (21 credits)

Offered by: Chemical Engineering (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 21

Program Description

Through courses already offered in the Faculties of Science, Engineering, and Medicine and Health Sciences, depending on the courses completed, undergraduate students will acquire knowledge in some of the following areas related to nanotechnology:

- Nanomaterial synthesis and processing approaches
- Physicochemistry and quantum behavior of nanomaterials
- State-of-the-art techniques for nanomaterial characterization and detection
- Applications of nanomaterials in engineered solutions
- Nanomaterials in medicine and pharmacology
- Nanomaterials in electronics and energy
- Environmental, health, and social impacts of nanomaterials

Minor program credit weight: 21-22 credits

Students must complete 21 credits of courses as indicated below. A maximum of 12 credits of courses in the student's major may double-count with the Minor.

Students who have not taken the listed prerequisites for any of these courses should ensure that they have the adequate background and/or meet with the instructor before registering for the course. Permission from the instructor and/or department may be required.

The program is open to undergraduate students that are in Year 2 or higher.

Complementary Courses (21-22 credits)

Group A

Students must complete a minimum of 3 credits from the following list of courses:

Expand allContract all

Course	Title	Credits
BIEN 510	Engineered Nanomaterials for Biomedical Applications.	3
BMDE 508	Introduction to Micro and Nano-Bioengineering.	3
CHEE 521	Nanomaterials and the Aquatic Environment.	3
CHEM 534	Nanoscience and Nanotechnology.	3
CIVE 521	Nanomaterials and the Aquatic Environment.	3
ECSE 535	Nanoelectronic Devices.	3
MIME 570	Micro- and Nano-Fabrication Fundamentals.	3
PHYS 534	Nanoscience and Nanotechnology.	3

¹ Students can take only one course from each set of the following courses:

- MIME 260 Materials Science and Engineering., MIME 261 Structure of Materials., MIME 262 Properties of Materials in Electrical Engineering. or CHEE 380 Materials Science.
- CHEE 515 Interface Design: Biomimetic Approach. or MIME 515 (Bio)material Surface Analysis and Modification.
- CHEE 521 Nanomaterials and the Aquatic Environment. or CIVE 521 Nanomaterials and the Aquatic Environment.
- CHEM 534 Nanoscience and Nanotechnology. or PHYS 534 Nanoscience and Nanotechnology.
- BIOL 319 Introduction to Biophysics. or PHYS 319 Introduction to Biophysics.

² A 3.0 or higher CGPA is required in order to take these courses.

Group B

Students will be required to take up to 18-19 credits of courses from Group B, depending on how many courses from Group A were taken.

¹ A research-based course (maximum 4cr) with the focus on nanotechnology taken at McGill University may be considered for credits towards this Minor; students must obtain the approval of the research project from the Minor adviser prior to taking the course in order for the course to be counted as part of the Minor credits.

Physics Minor (B.Eng.) (18 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Engineering

Program credit weight: 18

Program Description

The B.Eng.; Minor in Physics focuses on thermal physics and quantum physics. This program is open to engineering students in one of the following honours programs offered by the Faculty of Engineering; Honours in Electrical Engineering and Honours in Mechanical Engineering. See the Engineering Student Centre for details on authorization needed for this program.

A maximum of 9 credits of double-counting is allowed with the major.

Required Courses (9 credits)

Software Engineering Minor (B.Eng.) (18 credits)

Offered by: Electrical & Computer Engr (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 18

Program Description

The Software Engineering Minor provides a foundation in basic computer science, computer programming, and software engineering practice.

The Minor program does not carry professional recognition.

Students must complete 18 credits (six courses) as follows. Up to 6 credits (two courses) may be double-counted towards a degree program.

Required Courses (9 credits)

- ² Restricted to Honours students or Computer Engineering or Electrical Engineering students with CGPA of at least 3.0 and B+ or better in prerequisites

Technological Entrepreneurship Minor (B.Eng.) (18 credits)

Offered by: Engineering - Dean's Office (Faculty of Engineering)

Degree: Bachelor of Engineering

Program credit weight: 18

Program Description

This Minor in Technological Entrepreneurship is a collaboration of the Faculty of Engineering and the Desautels Faculty of Management. The program focusses on an entrepreneurial mindset to see opportunity in the world and provide training in an entrepreneurial method to bring opportunities for change to life. This program takes a democratized approach to entrepreneurship, with exposure to the diverse manifestations of entrepreneurship in the world including but not limited to new ventures, social enterprise, tech start-ups, cooperatives, corporate venturing, side hustles, and passion projects. Up to 6 credits of Complementary Studies (Group B, Humanities, and Social Science courses) and/or elective courses may double-count towards the Minor.

Required Courses (9 credits)

Course	Title	Credits
FACC 500	Technology Business Plan Design.	3
INTG 215	Entrepreneurship Essentials for Non-Management Students.	3
MGPO 362	Fundamentals of Entrepreneurship.	3

Environment Concentration Minor (B.A.) (18 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Arts

Program credit weight: 18

Program Description

This 18-credit Minor Concentration Environment is intended for Arts students in the multi-track system, Law and Management students. Students in Agricultural & Environmental Sciences, Engineering, and Science should complete the Minor Environment.

Advising Note

Consultation with the Program Adviser for approval of course selection to meet program requirements is obligatory. No overlap is allowed between this program and the student's major program or concentration, or a second minor program.

Complementary Courses (18 credits)

18 credits of complementary courses, all of which must fall outside the discipline or field of the student's major program or concentration, and which must be 200-level or above, selected as follows:

12 credits of MSE core courses:

The core ENVR courses are taught at both campuses. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Expand allContract all

Course	Title	Credits
ENVR 200	The Global Environment.	3
ENVR 201	Society, Environment and Sustainability.	3
ENVR 202	The Evolving Earth.	3
ENVR 203	Knowledge, Ethics and Environment.	3
ENVR 400	Environmental Thought.	3

6 credits of environmentally related courses selected with the approval of the Program Adviser (at least 3 credits must be in natural sciences). A list of Suggested Courses is given below.

Suggested Course List

The Suggested Course List is divided into two thematic categories: Social Sciences and Policy; and Natural Sciences and Technology.

Most courses listed at the 300 level and higher have prerequisites. You are urged to prepare your program of study with this in mind.

This list is not exhaustive. You are encouraged to examine the course lists of the various domains in the Environment program for other courses that might interest you. Courses not on the Suggested Course List may be included with the permission of the Program Adviser.

Some courses on the Suggested Course List may be subject to other regulations (e.g., the Restricted Courses List for Faculty of Science students. If in doubt, ask the Program Adviser.

Location Note

When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Environment Minor (B.Sc. (Ag.Env.Sc.) or (B.Sc.) (18 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 18

Program Description

This 18-credit Minor Environment is intended for Faculty of Agricultural and Environmental Sciences students, and Faculty of Science students, but is open to students from other faculties as well, except Arts, Law, and Management. Students in Arts, Law, and Management should complete the Minor Concentration Environment.

Advising Note

Consultation with the Program Adviser for approval of course selection to meet program requirements is obligatory. No overlap is allowed between this program and the student's major program or concentration, or a second minor program.

Complementary Courses (18 credits)

18 credits of complementary courses, all of which must fall outside the discipline or field of the student's major program or concentration, and which must be 200-level or above, selected as follows:

12 credits of Bieler School of Environment core courses:

The core ENVR courses are taught at both campuses. You should register in Section 001 of an ENVR course that you plan to take on the Downtown Campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald Campus.

Expand allContract all

Course	Title	Credits
ENVR 200	The Global Environment.	3
ENVR 201	Society, Environment and Sustainability.	3
ENVR 202	The Evolving Earth.	3

ENVR 203	Knowledge, Ethics and Environment.	3	ENVR 421	Montreal: Environmental History and Sustainability.	3
ENVR 400	Environmental Thought.	3	GEOG 200	Geographical Perspectives: World Environmental Problems.	3
6 credits of environmentally related courses selected with the approval of the Program Adviser (at least 3 credits must be in social sciences). A list of Suggested Courses is given below.					
Suggested Course List			GEOG 210	Global Places and Peoples.	3
The Suggested Course List is divided into two thematic categories: Social Sciences and Policy; and Natural Sciences and Technology.			GEOG 216	Geography of the World Economy.	3
Most courses listed at the 300 level and higher have prerequisites. You are urged to prepare your program of study with this in mind.			GEOG 221	Environment and Health.	3
This list is not exhaustive. You are encouraged to examine the course lists of the various domains in the Environment program for other courses that might interest you. Courses not on the Suggested Course List may be included with the permission of the Bieler School of Environment Program Adviser.			GEOG 300	Human Ecology in Geography.	3
Some courses on the Suggested Course List may be subject to other regulations (e.g., the Restricted Courses List for Faculty of Science students). If in doubt, ask the Program Adviser.			GEOG 301	Geography of Nunavut.	3
Location Note			GEOG 302	Environmental Management 1.	3
When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald Campus in Sainte-Anne-de-Bellevue.			GEOG 303	Health Geography.	3

Faculty Program Environment - Ecological Determinants of Health in Society (B.A.) (54 credits)

Offered by: Bieler School of Environment (Faculty of Science)

Degree: Bachelor of Arts

Program credit weight: 54

Program Description

An understanding of the interface between human health and environment depends not only on an appreciation of the biological and ecological determinants of health, but equally on an appreciation of the role of social sciences in the design, implementation, and monitoring of interventions. Demographic patterns and urbanization, economic forces, ethics, indigenous knowledge and culture, and an understanding of how social change can be effected are all critical if we are to be successful in our efforts to assure health of individuals and societies in the future. Recognizing the key role that nutritional status plays in maintaining a healthy body, and the increasing importance of infection as a health risk linked intimately with the environment, this domain prepares students to contribute to the solution of problems of nutrition and infection by tying the relevant natural sciences to the social sciences.

Degree Requirements – B.A. students

To be eligible for a B.A. degree, a student must fulfil all Faculty and program requirements as indicated in Degree Requirements for the Faculty of Arts.

We recommend that students consult an Arts OASIS advisor for degree planning.

Program Prerequisites or Corequisites

To graduate from the Faculty Program in Environment, students are required to complete these courses by the end of their U1 year. These courses can be taken using the Satisfactory/Unsatisfactory option. See: [### Numeracy](http://www.mcgill.ca/study/university_regulations_and_resources/undergra...for details.</p>

Faculty Program Environment - Economics and the Earth's Environment (B.A.) (54 credits)

Offered by: Bieler School of Environment (Faculty of Science)

Degree: Bachelor of Arts

Program credit weight: 54

Program Description

Understanding Earth's geologic processes provides us with the knowledge to mitigate many of our society's environmental impacts due to resource extraction and waste disposal. This knowledge is not always enough, as economics often plays a controlling role in how we use and abuse our environment.

This domain educates students in the fundamentals of economics and Earth sciences. The fundamentals of economics are provided, as is their application to the effects of economic choices on Earth's environment. Examples of these applications include the economic effects of public policy toward resource industries and methods of waste disposal, and the potential effects of global warming on the global economy. Students also learn of minerals, rocks, soils, and waters that define much of Earth's environment and how these materials interact with each other and with the atmosphere. Courses in specific subdisciplines of Earth sciences combined with courses presenting a global vision of how the Earth and its environment operate provide the student with the necessary knowledge of geologic processes. Examples of this knowledge include the effects of mineral and energy extraction on the environment and how industrial waste interacts with solids and liquids in the environment. The Earth science and economics studies merge in the final year when the students apply what they have learned in the domain to current environmental issues.

Degree Requirements – B.A. students

To be eligible for a B.A. degree, a student must fulfil all Faculty and program requirements as indicated in Degree Requirements for the Faculty of Arts.

We recommend that students consult an Arts OASIS advisor for degree planning.

Program Prerequisites or Corequisites

To graduate from the Faculty Program in Environment, students are required to complete these courses by the end of their U1 year. These courses can be taken using the Satisfactory/Unsatisfactory option. See: http://www.mcgill.ca/study/university_regulations_and_resources/undergra... for details.

Faculty Program Environment - Environment and Development (B.A.) (54 credits)

Offered by: Bieler School of Environment (Faculty of Science)

Degree: Bachelor of Arts

Program credit weight: 54

Program Description

The B.A.; Faculty Program in Environment; Environment and Development is an introduction to theories, concepts and approaches associated with the complexities between environment and development. The problems and solutions to the development/environmental crisis, which include: the natural world, theories behind economic development and growth, and of the cultural constructs of nature and environment; knowledge of global economic and environmental organizations; and sustainability and the climate crisis.

Degree Requirements – B.A. students

To be eligible for a B.A. degree, a student must fulfil all Faculty and program requirements as indicated in Degree Requirements for the Faculty of Arts.

We recommend that students consult an Arts OASIS advisor for degree planning.

Program Prerequisites or Corequisites

To graduate from the Faculty Program in Environment, students are required to complete these courses by the end of their U1 year. These courses can be taken using the Satisfactory/Unsatisfactory option. See: http://www.mcgill.ca/study/university_regulations_and_resources/undergra... for details.

Calculus

3 credits of calculus from the following, or equivalent (e.g., CEGEP objective OOUN):

Expand allContract all

Course	Title	Credits

Expand allContract all

Course	Title	Credits
BIOL 111	Principles: Organismal Biology.	3
CHEM 110	General Chemistry 1.	4
PHYS 101	Introductory Physics - Mechanics.	4

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>), or contact Ms. Kathy Roulet, the Program Adviser (kathy.roulet@mcgill.ca).

Program Requirements

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes required courses, but does not include the program prerequisites or corequisites listed above.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and Macdonald campus in Sainte-Anne-de-Bellevue.

Required Courses (30 credits)

Location Note: ENVR courses are taught at both McGill's Downtown campus and Macdonald campus. You should register in Section 001 of an ENVR course on the Downtown campus, and in Section 051 of an ENVR on the Macdonald campus.

Environment Interfaculty Program (B.A. & Sc.) (54 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Arts and Science

Program credit weight: 54

Program Description

The B.A. & Sc.; Interfaculty Program in Environment focuses on the myriad of environmental problems faced by society today. The program offers a great degree of flexibility and can provide both a broad liberal arts/science training as well as specific and in-depth focus on particular areas of interest.

Program Requirements

1. Students are required to take a maximum of 21 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes required courses.
2. Students must complete at least 21 credits in the Faculty of Arts and at least 21 in the Faculty of Science as part of their interfaculty program and their minor or minor concentration. ENVR courses are considered courses in both Arts and Science, and so the credits are split between the two faculties for the purpose of this regulation.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught on both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Degree Requirements – B.A. & Sc. students

This program is offered as part of a Bachelor of Arts & Science (B.A. & Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Required Courses (18 credits)

Location Note: Core required courses are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Environment Major - Ecological Determinants of Health - Cellular (B.Sc. (Ag.Env.Sc.)) or (B.Sc.) (63 credits)**Offered by:** Bieler School of Environment**Degree:** Bachelor of Science (Agricultural and Environmental Sciences)**Program credit weight:** 63**Program Description**

The Cellular concentration in this domain is open only to students in the B.Sc.(Ag.Env.Sc.) Major Environment or B.Sc. Major Environment program.

This domain considers the interface between the environment and human well-being, with particular focus on the triad that ties human health to the environment through the elements of food and infectious agents. Each of these elements is influenced by planned and unplanned environmental disturbances. For example, agricultural practices shift the balance between beneficial and harmful ingredients of food. Use of insecticides presents dilemmas with regard to the environment, economics, and human health. The distribution of infectious diseases is influenced by the climatic conditions that permit vectors to coexist with humans, by deforestation, by urbanization, and by human interventions ranging from the building of dams to provision of potable water.

In designing interventions that aim to prevent or reduce infectious contaminants in the environment, or to improve food production and nutritional quality, not only is it important to understand methods of intervention, but also to understand social forces that influence how humans respond to such interventions.

Students in the Cellular concentration will explore these interactions in more depth, at a physiological level. Students in the Population concentration will gain a depth of understanding at an ecosystem level that looks at society, land, and population health.

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>), or contact Kathy Roulet, the Program Adviser (kathy.roulet@mcgill.ca).

Program Requirements

Note: You are required to take a maximum of 33 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Core: Required Courses (18 credits)

Location Note: Core required courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Environment Major - Ecological Determinants of Health - Population (B.Sc. (Ag.Env.Sc.) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

The Population concentration in this domain is open only to students in the B.Sc.(Ag.Env.Sc.) Major Environment or B.Sc. Major Environment program.

This domain considers the interface between the environment and human well-being, with particular focus on the triad that ties human health to the environment through the elements of food and infectious agents. Each of these elements is influenced by planned and unplanned environmental disturbances. For example, agricultural practices shift the balance between beneficial and harmful ingredients of food. Use of insecticides presents dilemmas with regard to the environment, economics, and human health. The distribution of infectious diseases is influenced by the climatic conditions that permit vectors to coexist with humans, by deforestation, by urbanization, and by human interventions ranging from the building of dams to provision of potable water.

In designing interventions that aim to prevent or reduce infectious contaminants in the environment, or to improve food production and nutritional quality, not only is it important to understand methods of intervention, but also to understand social forces that influence how humans respond to such interventions.

Students in the Population concentration will gain a depth of understanding at an ecosystem level that looks at society, land, and population health. Students in the Cellular concentration will explore these interactions in more depth, at a physiological level.

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>), or contact Kathy Roulet, the Program Adviser (kathy.roulet@mcgill.ca).

Program Requirements

Note: You are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Core: Required Courses (18 credits)

Location Note: Core required courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Environment Major - Environmetrics (B.Sc. (Ag.Env.Sc.)) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

This domain (63 credits including core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

In view of the crucial need for sound study design and appropriate statistical methods for analyzing environmental changes and their impacts on humans and various life forms and their ecological relationships, this program is intended to provide students with a strong background in the use of statistical methods of data analysis in environmental sciences.

Graduates will be capable of effectively participating in the design of environmental studies and adequately analyzing data for use by the environmental community. Accordingly, the list of courses for the Environmetrics Domain is composed primarily of statistics courses and mathematically oriented courses with biological and ecological applications. The list is completed by general courses that refine the topics introduced in the Bieler School of Environment core courses by focusing on the ecology of living organisms, soil sciences or water resources, and impact assessment. These courses should allow the students to understand their interlocutors and be understood by them in their future job. Students can further develop their background in applied or mathematical statistics and their expertise in environmental sciences by taking complementary courses along each of two axes: statistics and mathematics, and environmental sciences. An internship is also offered to students to provide them with preliminary professional experience.

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available

Program Requirements

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning their schedule and registering for courses, students should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Core: Required Courses (18 credits)

Location Note: Core required courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue. You should register in Section 001 of an ENVR course if you want to take it on the Downtown campus, and in Section 051 of an ENVR course if you want to take it on the Macdonald campus.

Environment Major - Food Production and Environment (B.Sc.(Ag.Env.Sc.)) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

This domain (63 credits including core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment programs.

The business of food production is an area of human activity with a large and intimate interaction with the environment. As the global population rises, demand for food and food production increases. This demand must be met through a combination of increased productivity of existing agricultural land and by bringing new arable land into production. This is a serious challenge for two main reasons. Firstly, there are environmental impacts of agricultural activities which can

be significant and which can be difficult to assess and contain, as the effects range from loss of biodiversity due to increasing farm size, production of biofuels versus food, non-point source pollution of rivers and lakes, and a loss of arable land to urbanization. Secondly, a growing population needs support from a number of different land uses (e.g., urban growth, transportation, water resource use, timber resources, etc.), many of which conflict, and all of which compete with food production land requirements. As the available land resource decreases, land-use competition for what remains will grow more fierce, making the need for smart and informed decision-making related to food production increasingly critical.

Program Prerequisites or Corequisites

All students in this program MUST take these pre- or corequisite courses, or their equivalents. These courses are taken as follows:

One of the following courses or CEGEP equivalent (e.g., CEGEP objective 00XU):

Environment Major - Land Surface Processes and Environmental Change (B.Sc. (Ag.Env.Sc.) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

This domain (63 credits including core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment programs.

The thin soil layer on the planet's land surfaces controls the vital inputs of water, nutrients, and energy to terrestrial and freshwater aquatic ecosystems. Widespread occurrences around the globe of desertification, soil erosion, deforestation, and land submergence over water reservoirs indicate that this dynamic system is under increasing pressure from population growth and changes in climate and land uses. Production of key greenhouse gases (water vapour, CO₂, and methane) is controlled by complex processes operating at the land surface, involving climate change feedbacks that need to be fully understood, given current global warming trends.

The program introduces students to the interacting physical and biogeochemical processes at the atmosphere-lithosphere interface, which fashion land surface habitats and determine their biological

productivity and response to anthropogenic or natural environmental changes. Through an appropriate selection of courses, students can prepare for graduate training in emerging research areas such as earth system sciences, environmental hydrology, and landscape ecology.

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>), or contact Kathy Roulet, the Program Adviser (kathy.roulet@mcgill.ca).

Program Requirements

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning their schedule and registering for courses, students should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Core: Required Courses (18 credits)

Environment Major - Renewable Resource Management (B.Sc. (Ag.Env.Sc.) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

This domain (63 credits including core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

Renewable resource management is an emerging field that focuses on the ecosystem structures and processes required to sustain the delivery, to humanity, of ecosystem goods and services such as food, clean water and air, essential nutrients, and the provision of beauty and inspiration. Renewable resource management recognizes humans as integral components of ecosystems and is used to develop goals that are consistent with sustainability and ecosystem maintenance.

The Renewable Resource Management domain provides students with an understanding of:

- the interactions between physical and biological factors that determine the nature and dynamics of populations and entities in the natural environment;
- the ways in which ecosystems can be managed to meet specific goals for the provision of goods and services;
- the economic and social factors that determine how ecosystems are managed;
- the ways in which management of natural resources can affect the capability of natural ecosystems to continue to supply human needs in perpetuity; and
- the approaches and technologies required to monitor and analyze the dynamics of natural and managed ecosystems.

Core: Complementary Course - Senior Research Project (3 credits)

Only 3 credits will be applied to the program; extra credits will count as electives.

Environment Major - Water Environments and Ecosystems (B.Sc. (Ag.Env.Sc.)) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

The Major Environment - Water Environments and Ecosystems program is an introduction to the atmospheric processes as well as the anthropogenic processes that shape our water environments, and the interconnectedness between these environments and natural and human-built ecosystems. The program includes two streams in which to specialize: the Biological Stream focuses on the ecological facet of the water environment and the mechanisms regulating the different forms of life in water bodies; and the Physical Stream focuses on the physical facet of the water environment, and the transport and transformation mechanisms of water on the planet, from rivers to the ocean and atmosphere.

Program Requirements

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes required and complementary courses.

Environment Major- Biodiversity and Conservation (B.Sc.(Ag.Env.Sc.)) or (B.Sc.) (63 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 63

Program Description

This domain (63 credits including core) is open only to students in the B.Sc.(Ag.Env.Sc.) Major in Environment or B.Sc. Major in Environment program.

This domain links the academic study of biological diversity with the applied field of conservation biology. The study of biological diversity, or "biodiversity," lies at the intersection of evolution with ecology and genetics, combining the subdisciplines of evolutionary ecology, evolutionary genetics, and ecological genetics. It has two main branches: the creation of diversity and the maintenance of diversity.

Both processes are governed by a general mechanism of selection acting over different scales of space and time. This gives rise to a distinctive set of principles and generalizations that regulate rates of diversification and levels of diversity, as well as the abundance or rarity of different species. Conservation biology constitutes the application of these principles in the relevant social and economic context to the management of natural systems, with the object of preventing the extinction of rare species and maintaining the diversity of communities. As the impact of industrialization and population growth on natural systems has become more severe, conservation has emerged as an important area of practical endeavour.

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>), or contact Kathy Roulet, the Program Adviser (kathy.roulet@mcgill.ca).

Program Requirements

Note: Students are required to take a maximum of 30 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning their schedule and registering for courses, students should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and Macdonald campus in Sainte-Anne-de-Bellevue.

Required Courses (18 credits)

Location Note: ENVR courses are taught at both McGill's Downtown campus and Macdonald campus. You should register in Section 001 of an ENVR course on the Downtown campus, and in Section 051 of an ENVR course on the Macdonald campus.

Environment Major - Atmospheric Environment and Air Quality (B.Sc.) (60 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science

Program credit weight: 60

Program Description

The rapid expansion of industrialization has been accompanied by a host of environmental problems, many, if not most, involving the atmosphere. Some problems are of a local nature, such as air pollution in large urban centres, while others are global, or at least reach areas far removed from industrial activities.

The emphasis in this domain is on the mechanisms of atmospheric flow and on atmospheric chemistry. Courses examine how the atmosphere transports pollution, lifting it to great heights into the stratosphere or keeping it trapped near the ground, moving it around the globe or imprisoning it locally, or how it simply cleanses itself of pollution through rainfall. The domain also gives students the training required to understand the important chemical reactions taking place within the atmosphere, as well as the know-how necessary to measure and analyze atmospheric constituents.

Degree Requirements — B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Suggested First Year (U1) Courses

For suggestions on courses to take in your first year (U1), you can consult the "Bieler School of Environment Student Handbook" available on the website (<http://www.mcgill.ca/environment>).

Program Requirements

Note: Students are required to take a maximum of 31 credits at the 200 level and a minimum of 12 credits at the 400 level or higher in this program. This includes core and required courses.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Core: Required Courses

Location Note: Core required courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Environment Major - Earth Sciences and Economics (B.Sc.) (66 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science

Program credit weight: 66

Program Description

The resources necessary for human society are extracted from the Earth, used as raw materials in our factories and refineries, and then returned to the Earth as waste. Geological processes produce resources humans depend on, and they also determine the fate of wastes in the environment. Understanding Earth's geologic processes provides us with the knowledge to mitigate many of our society's environmental impacts due to resource extraction and waste disposal. Additionally, economics frequently affects what energy sources power our society and how our wastes are treated. Earth sciences and economics are essential for our understanding of the many mechanisms, both physical and social, that affect Earth's environment.

This domain includes the fundamentals of each discipline. Students learn of minerals, rocks, soils, and waters and how these materials interact with each other and with the atmosphere. Fundamental economic theory and the economic effects of public policy toward resource industries, methods of waste disposal, and the potential effects of global warming on the global economy are also explored.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Environment Honours (B.A.) (60 credits)

Offered by: Bieler School of Environment**Degree:** Bachelor of Arts**Program credit weight:** 60

Program Description

This program is open only to students in the B.A. Faculty Program Environment. To be eligible for Honours, students must satisfy the requirements set by their B.A. degree.

In addition, students must satisfy the following:

1. Students apply for the Honours program in March of their U2 year. See the Program Adviser for details.
2. Applicants must have a minimum Program GPA (GPA of all required and complementary courses for the program in Environment taken at McGill) of 3.3 to enter the Honours program.
3. Students must earn a B grade (3.0) or higher for the Honours Research course (ENVR 495D1 and ENVR 495D2).
4. Students are required to achieve a minimum overall CGPA of 3.0 at graduation, and a minimum Program GPA of 3.3 to obtain Honours.
5. Arts (B.A.) students in the Honours Environment program must also complete a minor concentration in an academic unit other than the Bieler School of Environment. Please refer to the Faculty of Arts

regulations on Honours programs found under "Faculty Degree Requirements", "About Program Requirements" and "Departmental Programs".

Students in the B.A. Honours programs complete the core and domain courses (54 credits) according to their chosen domain as well as the 6 credits of Honours required courses.

At the completion of your Honours research, you are expected to present your results at an Honours Symposium, and are required to submit a copy of your final report to the Bieler School of Environment Program Adviser.

Degree Requirements – B.A. students

To be eligible for a B.A. degree, a student must fulfil all Faculty and program requirements as indicated in Degree Requirements for the Faculty of Arts.

We recommend that students consult an Arts OASIS advisor for degree planning.

Environment Honours (B.Sc.) (72 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science

Program credit weight: 72

Program Description

This program is open only to students in the B.Sc. Major Environment. To be eligible for Honours, students must satisfy the requirements set by their B.Sc. degree.

In addition, students must satisfy the following:

1. Students apply for the Honours program in March of their U2 year. See the Program Adviser for details.
2. Applicants must have a minimum Program GPA (GPA of all required and complementary courses for the program in Environment taken at McGill) of 3.3 to enter the Honours program.
3. Students must earn a B grade (3.0) or higher for the Honours Research course (ENVR 495D1 and ENVR 495D2).
4. Students are required to achieve a minimum overall CGPA of 3.0 at graduation, and a minimum Program GPA of 3.3 to obtain Honours.

Students in the B.Sc. Honours programs complete the core and domain courses (60 to 66 credits) according to their chosen domain as well as the 6 credits of Honours required courses.

At the completion of your Honours research, you are expected to present your results at an Honours Symposium, and are required to submit a copy of your final report to the Bieler School of Environment Program Adviser.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Environment Honours (B.A. & Sc.) (60 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Arts and Science

Program credit weight: 60

Program Description

This program is open only to students in the B.A. & Sc. Interfaculty Program Environment. To be eligible for Honours, students must satisfy the requirements set by their B.A. & Sc. degree.

In addition, students must satisfy the following:

1. Students apply for the Honours program in March of their U2 year. See the Program Adviser for details.

2. Applicants must have a minimum Program GPA (GPA of all required and complementary courses for the program in Environment taken at McGill) of 3.3 to enter the Honours program.
3. Students must earn a B grade (3.0) or higher for the Honours Research course (ENVR 495D1 and ENVR 495D2).
4. Students are required to achieve a minimum overall CGPA of 3.0 at graduation, and a minimum Program GPA of 3.3 to obtain Honours.
5. B.A. & Sc. students must complete at least 21 credits in the Faculty of Arts and at least 21 in the Faculty of Science as part of their Honours program and their Minor concentration or Minor program. For a list of available Minor concentrations or Minor programs, see "Overview of Programs Offered" and "Minor Concentrations or Minors."

Students in the B.A. & Sc. Honours programs complete the coursework (54 credits) for the Interfaculty Program in Environment as well as the Honours required courses (6 credits).

At the completion of your Honours research, you are expected to present your results at an Honours Symposium, and are required to submit a copy of your final report to the Bieler School of Environment Program Adviser.

Degree Requirements – B.A. & Sc. students

This program is offered as part of a Bachelor of Arts & Science (B.A. & Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Honours Required Courses (6 credits)

Course	Title	Credits
ENVR 495D1	Honours Research.	3
ENVR 495D2	Honours Research.	3
ENVR 495N1	Honours Research.	3
ENVR 495N2	Honours Research.	3

¹ Note: You take either ENVR 495D1 Honours Research. and ENVR 495D2 Honours Research. (6 credits over consecutive terms) or ENVR 495N1 Honours Research. and ENVR 495N2 Honours Research. (6 credits over non-consecutive terms).

Environment Honours (B.Sc. (Ag.Env.Sc.)) (69 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Science (Agricultural and Environmental Sciences)

Program credit weight: 69

Program Description

This program is open only to students in the B.Sc.(Ag.Env.Sc.) Major Environment. To be eligible for Honours, students must satisfy the requirements set by their B.Sc.(Ag.Env.Sc.) degree.

In addition, students must satisfy the following:

1. Students apply for the Honours program in March of their U2 year. See the Program Adviser for details.
2. Applicants must have a minimum Program GPA (GPA of all required and complementary courses for the program in Environment taken at McGill) of 3.3 to enter the Honours program.
3. Students must earn a B grade (3.0) or higher for the Honours Research course (ENVR 495D1 and ENVR 495D2).
4. Students are required to achieve a minimum overall CGPA of 3.0 at graduation, and a minimum Program GPA of 3.3 to obtain Honours.

Students in the B.Sc.(Ag.Env.Sc.) Honours program complete the core and domain courses (60 to 63 credits) according to their chosen domain as well as the 6 credits of required Honours courses.

At the completion of your Honours research, you are expected to present your results at an Honours Symposium, and are required to submit a copy of your final report to the Bieler School Program Adviser.

¹ Note: Students take either ENVR 495D1 Honours Research. and ENVR 495D2 Honours Research. (6 credits over consecutive terms) or ENVR 495N1 Honours Research. and ENVR 495N2 Honours Research. (6 credits over non-consecutive terms).

Environment Joint Honours Component (B.A.) (36 credits)

Offered by: Bieler School of Environment

Degree: Bachelor of Arts

Program credit weight: 36

Program Description

Students wishing to study at the honours level in two disciplines can combine joint honours program components in any two Arts disciplines. For a list of available joint honours programs, see "Overview of Programs Offered" and "Joint Honours Programs".

Joint Honours students should consult an adviser in each department for approval of their course selection and their interdisciplinary honours research project.

Students will enter the Joint Honours at the end of their U1 year, and will be required to maintain a PGPA of 3.30 and an overall CGPA of 3.0. Whereas the Faculty Program Environment Honours requires the student to undertake a Minor as well, the Joint Honours Environment component does not.

This program comprises 36 credits, including:

- Honours research (6 credits);
- Environment core (21 credits);
- statistics (3 credits); and
- complementary courses (6 credits).

Degree Requirements – B.A. students

To be eligible for a B.A. degree, a student must fulfil all Faculty and program requirements as indicated in Degree Requirements for the Faculty of Arts.

We recommend that students consult an Arts OASIS advisor for degree planning.

Program Prerequisites or Corequisites

The program corequisites (6-8 credits), which are common to the stand-alone Environment Honours program, are in addition to the overall credit account. Students are required to complete these courses by the end of their U1 year.

3 credits of Basic Science, one of the following, or equivalent (e.g., CEGEP objectives Biology 00UK, Chemistry 00UL, Physics 00UR):

Expand allContract all

Course	Title	Credits
BIOL 111	Principles: Organismal Biology.	3
CHEM 110	General Chemistry 1.	4

Honours Research

0-6 credits from the following:

Expand allContract all

Course	Title	Credits
ENVR 494	Joint Honours Research.	3
ENVR 495D1	Honours Research.	3
ENVR 495D2	Honours Research.	3
ENVR 495N1	Honours Research.	3
ENVR 495N2	Honours Research.	3

Note: Students must complete 6 credits of honours research between the two components of the program. If the second component requires 0 credits of honours research, the student must take 6 credits of ENVR honours research. If the second component requires 3 credits of honours research, the student must take 3 credits of ENVR honours research. If the second component requires 6 credits of honours research, the student is not required to take any credits of ENVR honours research. Students may not count the same honours research credits towards both components.

6-12 credits chosen with approval of the Program Adviser. A maximum of 3 credits of these courses may be at 200 or 300 level.

Environment (Dip.) (30 credits)

Offered by: Bieler School of Environment

Degree: Diploma in Environment

Program credit weight: 30

Program Description

The Diploma in Environment is designed for students with an undergraduate degree who wish to enrich or reorient their training, supplementing their specialization with additional undergraduate-level course work in Environment.

The Diploma requires 30 credits of full-time or part-time studies at McGill and is a one-year program if taken full-time.

Students holding a B.Sc. or a B.A. degree or equivalent in good standing will be permitted to register for the Diploma through the Faculty of Agricultural and Environmental Sciences, the Faculty of Arts, or

the Faculty of Science, provided they are otherwise acceptable for admission to the University.

Advising Note

Consultation with the Program Adviser for approval of course selection to meet program requirements is obligatory. All courses must be at the 200 level and above, and completed with a grade of C or better.

Required Courses (18 credits)

The core ENVR courses are offered on both campuses. You should register in Section 001 of an ENVR course that you plan to take on the Downtown campus, and in Section 051 of an ENVR course that you plan to take on the Macdonald campus.

Expand allContract all

Course	Title	Credits
ENVR 200	The Global Environment.	3
ENVR 201	Society, Environment and Sustainability.	3
ENVR 202	The Evolving Earth.	3
ENVR 203	Knowledge, Ethics and Environment.	3
ENVR 301	Environmental Research Design.	3
ENVR 400	Environmental Thought.	3

Complementary Courses (12 credits)

12 credits of complementary courses are selected as follows:

3 credits selected with the approval of the Program Advisor in an area outside of the student's previous degree (e.g., those with a B.A. or equivalent degree must take at least 3 credits in the natural sciences; those with a B.Sc. or equivalent degree must take at least 3 credits in the social sciences). A list of Suggested Courses is given below.

9 credits in an area of focus chosen by the student with the approval of the Program Advisor. At least 6 credits must be taken at the 400 level or higher. A list of Suggested Courses is given below.

Suggested Course List

The Suggested Course List is divided into two thematic categories: Social Sciences and Policy; and Natural Sciences and Technology.

Most courses listed at the 300 level and higher have prerequisites. You are urged to prepare your program of study with this in mind.

This list is not exhaustive. You are encouraged to examine the course lists of the various domains in the Environment program for other courses that might interest you. Courses not on the Suggested Course List may be included with the permission of the Program Advisor.

Some courses on the Suggested Course List may be subject to other regulations (e.g., the Restricted Courses List for Faculty of Science students). If in doubt, ask the Program Advisor.

Location Note: When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Honours Law (B.C.L./J.D.) (120 credits)

Offered by: Law (Faculty of Law)

Degree: BCLJD

Program credit weight: 120

Program Requirements

The B.C.L and J.D. with Honours program is open to students who have completed four terms of study at the Faculty of Law and who, during that time, have maintained a GPA of 3.0. Students must complete 15 credits of Honours Thesis courses in addition to the 105 credits required in the B.C.L and J.D. program. Conditional upon submission and approval of an Honours Thesis, students will be granted a B.C.L. and J.D. with Honours.

Elective Courses (46 credits)

Students must take 46 other elective courses offered within the Faculty or approved as credit equivalences in order to complete the 120-credit degree requirement.

Minimum Writing Requirement

All students are required to submit at least one research paper. This requirement may be satisfied by:

1. writing and essay in a course in which the essay constitutes no less than 75% of the final grade;
2. writing a term essay under independent supervision, for credit, within the Faculty of Law;
3. writing an article, note, or comment of equivalent substance that is published or accepted for publication in the McGill Law Journal and approved by the Faculty Adviser to that publication.

Papers written jointly do not satisfy this requirement.

Law (B.C.L./J.D.) (105 credits)

Offered by: Law (Faculty of Law)

Elective Courses (46 credits)

Students must take 46 other elective courses offered within the Faculty or approved as credit equivalences in order to complete the 105-credit degree requirement.

Minimum Writing Requirement

All students are required to submit at least one research paper. This requirement may be satisfied by:

1. writing an essay in a course in which the essay constitutes no less than 75% of the final grade;
2. writing a term essay under independent supervision, for credit, within the Faculty of Law;
3. writing an article, note, or comment of equivalent substance that is published or accepted for publication in the McGill Law Journal and approved by the Faculty Adviser to that publication.

Papers written jointly do not satisfy this requirement.

Law (B.C.L./J.D.) (with Minor) (123 credits)

Offered by: Law (Faculty of Law)

Degree: BCLJD

Program credit weight: 123

Program Requirements

The B.C.L. and J.D. with Minor is open to all students enrolled in the Faculty of Law and allows them to graduate with a minor concentration offered by McGill's Faculty of Arts or a minor offered by McGill's Faculty of Science or a minor offered by McGill's Desautels Faculty of Management for Non-Management students.

Law students should consult the Faculty of Arts and Faculty of Science and the Desautels Faculty of Management sections of the Undergraduate Programs, Courses and University Regulations publication available at <http://www.mcgill.ca/study/> to determine the requirements for individual minor concentrations and minors.

B.C.L. and J.D. with Minor

In addition to the 105 credits needed for the B.C.L. and J.D. program, students complete 18 further credits toward a minor program. Since Science minors are typically 24 credits and Management minors and Arts minor concentrations are typically 18 credits, Law students will be allowed to count 6 credits of a 24-credit Science minor toward their Law degree as non-Law credits.

Required Courses (47 credits)

Elective Courses (46 credits)

Students must take 46 other elective courses offered within the Faculty or approved as credit equivalences in order to complete the 123-credit degree requirement.

Minimum Writing Requirement

All students are required to submit at least one research paper. This requirement may be satisfied by:

1. writing an essay in a course in which the essay constitutes no less than 75% of the final grade;
2. writing a term essay under independent supervision, for credit, within the Faculty of Law;
3. writing an article, note, or comment of equivalent substance that is published or accepted for publication in the McGill Law Journal and approved by the Faculty Adviser to that publication.

Papers written jointly do not satisfy this requirement.

Law and Management (Non-Thesis): General Management (Joint B.C.L./J.D. & M.B.A.) (132 credits)

Offered by: Law (Faculty of Law)

Degree: BCLJD

Program credit weight: 132

Program Description

A joint M.B.A.; Non-Thesis – General Management and B.C.L./J.D. program is offered by the Desautels Faculty of Management and the Faculty of Law. This joint program provides students the opportunity to pursue legal and administrative aspects of business. Successful candidates graduate with M.B.A., B.C.L., and J.D. degrees, a trio that prepares them for careers in private and public enterprise, as well as government service.

Students complete 39 credits for the M.B.A. and 93 credits for the integrated B.C.L./J.D., for a total of 132 credits.

- Papers written jointly do not satisfy this requirement.

Major Concentration Law with Major Concentration Commercial Negotiation and Dispute Resolution (B.C.L./J.D.) (123 credits)

Offered by: Law (Faculty of Law)

Degree: BCLJD

Program credit weight: 123

Program Description

The B.C.L. and J.D.. with a major concentration is open to all students enrolled in the Faculty of Law.

The Major Concentration in Commercial Negotiation and Dispute Resolution is articulated around a synthetic skill set driven by the transversal theme "Commercial Negotiation and Dispute Resolution" and is inspired by an interdisciplinary approach.

Law and non-law courses are combined with the practical experience acquired during an internship. The required writing of an independent essay allows students to integrate the various academic and clinical strands of the major program, and, more broadly, of legal learning.

The Major concentration is a 36-credit program. Students are permitted to include within their 105 credits for the B.C.L. and J.D. 18 credits toward their Major concentration. The remaining 18 credits needed for the Major concentration are added on top of the 105 credits for the Law degrees for a total of 123 credits.

Required Courses (6 credits)

WRIT 493	Term Essay 3.	3			
WRIT 494	Term Essay 1B.	3			
WRIT 495	Term Essay 1C.	3			

The essay must be written on a subject related to Commercial Negotiation and Dispute Resolution. The essay is to be written in the fourth year of the program in order to allow the student to integrate the various academic and clinical strands of the program. The topic must be approved by the Associate Dean (Academic).

Law and Non-Law Courses (27 credits)

27 credits from the following lists of law and non-law courses of which at least 6 credits must be non-law courses.

Major Concentration Law with Major International Human Rights and Development (B.C.L./J.D.) (123 credits)

Offered by: Law (Faculty of Law)

Degree: BCLJD

Program credit weight: 123

Program Description

The B.C.L. and J.D. with a major concentration is open to all students enrolled in the Faculty of Law.

The Major Concentration in International Human Rights and Development is articulated around a synthetic skill-set driven by the transversal theme "International Human Rights and Development" and inspired by an interdisciplinary approach.

Law and non-law courses are combined with the practical experience acquired during an internship. The required writing of an independent essay allows students to integrate the various academic and clinical strands of the major program, and, more broadly, of legal learning.

The Major concentration is a 36-credit program. Students are permitted to include within their 105 credits for the B.C.L. and J.D. 18 credits toward their Major concentration. The remaining 18 credits needed for the Major concentration are added on top of the 105 credits for the Law degrees for a total of 123 credits.

Required Courses (6 credits)

Expand allContract all

Course	Title	Credits
WRIT 300D1	Major Internship.	3
WRIT 300D2	Major Internship.	3

Complementary Courses (30 credits)

Essay Course (3 credits)

3 credits from:

Expand allContract all

Course	Title	Credits
WRIT 491	Term Essay 1A.	3
WRIT 492	Term Essay 2.	3
WRIT 493	Term Essay 3.	3
WRIT 494	Term Essay 1B.	3
WRIT 495	Term Essay 1C.	3

The essay must be written on a subject related to International Human Rights and Development. The essay is to be written in the fourth year of the program, in order to allow the student to integrate the various academic and clinical strands of the program. The topic must be approved by the Associate Dean (Academic).

Law and Non-Law Courses (27 credits)

27 credits from the following lists of law and non-law courses of which at least 6 credits must be from non-law courses.

Law Courses

Entrepreneurship Concentration (B.Com.) (15 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 15

Program Description

This concentration is designed to provide students with an understanding of the key concepts and processes involved in starting and managing new ventures. It combines rigor with relevance, as all students will complete a major field project, thus providing an opportunity to apply the concepts acquired in the classroom. The concentration is multidisciplinary and integrative, as it includes courses from across areas in the Faculty. Upon completing the concentration, students will understand how to conceptualize, develop, and manage successful new ventures. The concentration is appropriate for students interested in a wide variety of new ventures, from for-profit private companies to social enterprises and cooperatives.

Strategic Management - Global Strategy Concentration (B.Com.) (15 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 15

Program Description

There are two options offered in the Strategic Management Concentration: Global Strategy and Social Business & Enterprise.

The Concentration in Strategic Management - Global Strategy Option provides students with the skills necessary to understand contemporary businesses in a global context, and to explore the implications of business decisions for society and the environment. Since globalization affects organizations of all types, this concentration conveys the tools necessary to understand industry structures and competitive dynamics in a global context. It provides opportunities to analyze organizational capabilities and how to enhance them, and enables students to assess the requirements of doing business in different economic and political systems. Global Strategy adds an overarching, holistic and integrated perspective to the Faculty's other concentrations and majors. Anticipated career trajectories include positions in consulting; strategic planning and analysis in multinationals and government agencies; and business development in new start-ups and small enterprises.

Strategic Management - Social Business & Enterprise Concentration (B.Com.) (15 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 15

Program Description

There are two options offered in the Strategic Management Concentration: Global Strategy and Social Business & Enterprise.

The concentration in Strategic Management - Social Business & Enterprise Option is intended for students interested in harnessing the not-for-profit, civil, and for-profit sectors to tackle social issues. Students will be challenged to reconceptualise strategy formation and implementation with an emphasis on economic development, the environment, corporate social responsibility, and social impact. The concentration will impart a comprehensive set of management skills, encompassing cross-sectoral collaboration and social entrepreneurship. It encourages students to complement their courses in Management with an array of course offerings from outside the Faculty. The concentration complements concentrations and majors in other Management areas, adding a holistic and integrated perspective. Anticipated career trajectories include positions in NGOs; international organizations such as those affiliated with the UN; social enterprise; government agencies; as well as in the fields of consulting and corporate social responsibility.

Entrepreneurship (for Non-Management Students) (Minor) (18 credits)

Offered by: Management (Desautels Faculty of Management)

Program credit weight: 18

Program Description

The B.Com.; Minor in Entrepreneurship (for Non-Management Students) focuses on an entrepreneurial mindset to see opportunity in the world and provides training in an entrepreneurial method to bring opportunities for change to life. With three different streams, this program takes a democratized approach to entrepreneurship, with exposure to the diverse manifestations of entrepreneurship in the world including but not limited to new ventures, social enterprise, start-ups, cooperatives, corporate venturing, side hustles, and passion projects. The minor emphasizes self-directed learning and experiential education.

Complementary Courses (18 credits)

Selected from other 200-, 300-, and 400-level courses in Economics (ECON), excluding courses with numbers below 210. At least 6 of these 18 credits should be taken from courses with 400-level numbers. No more than 6 of the 18 credits may be taken at the 200 level.

Finance Major (B.Com.) (72 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 72

Program Description

The 30-credit Finance Major has been designed to meet the increasing demand for expertise in this rapidly growing functional area of business. This major is designed to provide in-depth knowledge of finance theory, financial institutions, investment analysis, risk management, and applied techniques. Employment for graduates is most often obtained in investment and commercial banking, manufacturing and service firms, non-profit organizations and governments, and non-financial firms.

All BCom students take a Core curriculum in addition to this Major.

Course	Title	Credits
BUSA 401	Independent Studies in International Business.	3

¹ Only one Independent Studies course may be taken in the B.Com. degree.

International Exchange

Students who participate in an exchange or Study Away will receive credits for courses successfully approved and completed while abroad. This will fulfill the experiential learning component, no additional credits will be granted for this option.

NOTE: There are CGPA requirements for experiential learning experiences [international exchange, internship, research]. Students must consult with a BCom Academic Advisor if they do not meet the minimum CGPA requirement.

Area of Study Component

18 credits from one of the following three Streams:

Stream 1: Comparative Global Studies

Students can choose to study a region including Africa, East Asia, Middle East, South Asia, Europe, or the Americas, or several regions from a comparative global perspective in Religious Studies, Political Science, History, or Economics. This option focuses on aspects of global society and culture from a social science perspective. This theme is suitable for students who would like to work in a specific country or region or for students who want to work for a multinational company or government organization with global interests.

- B.A. Minor Concentration in African Studies (18 credits)
- B.A. Minor Concentration in Canadian Studies (18 credits)
- B.A. Minor Concentration in East Asian Cultural Studies (18 credits)

Stream 2: Global Politics and Economy

This theme focuses on aspects of public policy from the perspective of global transactions and finance. Students may select a minor concentration in the area of international relations and investigate policy on a global scale and its operations in the context of policy, war and peace, the economy, security, trade, human rights, and international organizations. Graduates with this option would be poised to apply their educational background to careers with world government, trade, or economic organizations, NGOs, national governments, or businesses with global interests. The choices of programs include Economics, Geography, Political Science, or a selected group of courses.

- B.A. Minor Concentration in Economics (18 credits)
- B.A. Minor Concentration in Political Science (18 credits)

OR

Global Governance, Conflict and Human Rights

18 credits of the following courses with at least 6 credits at the 300 level or above:

Steam 3: Well-Being and Development

Broad-based, interdisciplinary topics will allow students to study current issues of social importance ranging from: poverty and inequality, health promotion and the environment, sustainability, and natural resource management. Students will be prepared to apply business practices to the protection of the vulnerable and the planet. Students will be poised to work for multinationals, governments, or non-governmental organizations.

- B.A. Minor Concentration in Anthropology (18 credits)
- B.A. Minor Concentration in Economics (18 credits)
- B.A. Minor Concentration in Geography (18 credits)
- B.A. Minor Concentration in International Development Studies (18 credits)
- B.A. Minor Concentration in Psychology (18 credits)
- B.A. Minor Concentration in Social Studies of Medicine (18 credits)
- B.A. Minor Concentration in Sociology (18 credits)
- B.A. Minor Concentration in Environment (18 credits) [Bieler School of Environment]
- B.Sc. Minor in Environment (18 credits) [Bieler School of Environment]
- B.Sc. Field Study Minor (18 credits)

¹ Students should choose Economics (ECON) courses related to the environment, development, and health. Course numbers above ECON 209 Macroeconomic Analysis and Applications. (excluding ECON 295 Macroeconomic Policy.) are required, with at least 6 credits at the 300, 400, or 500 levels. Credits for the introductory sequence MGCR 293 Managerial Economics, and ECON 295 Macroeconomic Policy, that are prerequisites for 300-level courses in economics do not count as part of this Minor Concentration. ECON 227 Economic Statistics, will not count if it is taken to meet other B.Com. requirements.

Language Component

9-12 credits from the following:

1	Students may choose to complete additional credits in Japanese, Chinese or Korean for a total of 18 credits. Only 9 credits of EAST languages will count toward the Major and any optional additional credits will count as electives or toward another component if the student has sufficient credits to complete it within their degree. Students may not exceed the total credits required to graduate in order to complete these additional language credits.
2	Students with no prior knowledge of Arabic may choose two levels of Arabic. Only ISLA 221D1 Introductory Arabic./ISLA 221D2 Introductory Arabic. will count toward the Major and any additional optional credits in ISLA 322D1 Lower Intermediate Arabic./ISLA 322D2 Lower Intermediate Arabic. or ISLA 423D1 Higher Intermediate Arabic./ISLA 423D2 Higher Intermediate Arabic. will count as electives.

OR

12 credits of language courses, at the 500 level or lower, chosen from ONE of the following Subject Codes:

CLAS (Classics) [Modern Greek]

EAST (East Asian) - Third and Fourth Level

FREN (French)

FRSL (French as a Second Language)

GERM (German Studies) [German]

HISP (Hispanic Studies) [Spanish, Portuguese]

ISLA (Middle East Studies) [Lower and Higher Intermediate Level Arabic, Turkish, Urdu, Persian]

² ITAL (Italian Studies) [Italian]

JWST (Jewish Studies) [Hebrew, Yiddish]

RUSS (Russian)

¹ Students placed in Lower Intermediate Arabic will complete ISLA 322D1 Lower Intermediate Arabic./ISLA 322D2 Lower Intermediate Arabic. and ISLA 423D1 Higher Intermediate Arabic./ISLA 423D2 Higher Intermediate Arabic. for a total of 12 credits.

² Students wishing to register for ITAL 205D1 Italian for Beginners./ITAL 205D2 Italian for Beginners. should do so in their first year as this course is open only to U0 and U1 students. ITAL 206 Beginners Italian Intensive. is open to U0, U1, and U2 students. ITAL 210D1 Italian for Advanced Beginners./ITAL 210D2 Italian for Advanced Beginners., ITAL 215D1 Intermediate Italian./ITAL 215D2 Intermediate Italian., and ITAL 216 Intermediate Italian Intensive. can be taken by all students.

Note: Registration processes for language courses vary by department, but usually involve placement tests or departmental approval. Students

should consult with the individual departments to ensure that they register for the appropriate level.

Managing for Sustainability Major (B.Com.) (72 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 72

Program Description

The B.Com.; Major in Managing for Sustainability focuses on combining management and business knowledge with a solid understanding of the interlinked economic, social and ecological challenges of achieving sustainability. It integrates management studies with fundamentals of environmental science and sustainability.

The Major includes the integration of multiple management disciplines with sustainability; fundamental concepts of environmental science, social sciences and human impacts on natural systems; and an experiential learning component in the form of a consulting engagement, internship or research project offering "real world" experience.

ENVR 400	Environmental Thought.	3

Note: ENVR courses have limited enrolment.

3 credits of environmentally-related courses. A list of Suggested Courses is provided below.

Suggested Course List

The Suggested Course List is divided into two thematic categories: Social Sciences and Policy; and Natural Sciences and Technology.

Most courses listed at the 300 level and higher have prerequisites. You are urged to prepare your program of study with this in mind.

Some courses may be subject to other regulations.

This list is not exhaustive. You are encouraged to examine the course lists of the various programs in Environment for other courses that might interest you. Courses not on the Suggested Course List may be included with the permission of the Program Adviser.

Location Note:

When planning your schedule and registering for courses, you should verify where each course is offered because courses for this program are taught at both McGill's Downtown campus and at the Macdonald campus in Sainte-Anne-de-Bellevue.

Mathematics and Statistics for Management Major (B.Com.) (75 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 75

Program Description

(72-75 credits)

The B.Com.; Major in Mathematics and Statistics for Management focuses on newer methodologies and strategies to solve current and modern real-world problems. This program may be completed in 72 or 75 credits.

Program Prerequisites

Before entering the program, students must have completed the following courses [or their equivalent] if not already completed, above the program's 72-75 credits.

0-10 credits from:

Expand all	Contract all			
Course	Title	Credits		
MATH 133	Linear Algebra and Geometry.	3	COMP 202	Foundations of Programming.

Strategic Management Major (B.Com.) (72 credits)

Offered by: Management (Desautels Faculty of Management)**Degree:** Bachelor of Commerce**Program credit weight:** 72

Program Description

The Strategic Management Major combines traditional topics in strategic management, such as competition and globalization, with attention to pressing social, and environmental challenges. Since the activities of contemporary businesses can no longer be considered separately from these challenges, the Major is intended to foster a holistic view of management practice. Students will be encouraged to consider strategy formation and change for large corporations, small businesses, and social enterprises within their economic, social and environmental contexts. Because Strategic Management is a broad subject area, students are given flexibility to tailor this Major to their interests. Anticipated career trajectories are diverse, and include positions in management consulting, business development in new start-ups and small businesses; and strategic planning and analysis in large multinationals, NGOs, international organizations, and government agencies.

All BCom students take a Core curriculum in addition to this Major.

3 The B.Com. Honours Investment Management is a limited enrolment program and is by application only for students entering their U2 year. A minimum CGPA of 3.3 is necessary for students to be eligible to apply. Additional information may be found at the BCom Student Affairs Office, or on our website. In order to graduate in Honours in Investment Management, students must maintain a minimum CGPA of 3.00 and maintain a minimum program GPA of 3.0. A grade of B- or better must be achieved in all courses counted toward this program. Students who do not satisfy all the requirements of the Honours program may still receive a Major in Finance, provided the major requirements have been met.

3 All B.Com. students take a Core curriculum in addition to the Honours program.

Investment Management Honours (B.Com.) (87 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Commerce

Program credit weight: 87

Program Description

The B.Com. Honours Investment Management examines financial asset management, either on the buy side working with active portfolio allocation or on the sell side, working for brokerage firms. Rigorous training in accounting, statistics, and finance, including analyzing financial statements, performing company valuations, constructing efficient portfolios with appropriate risk profiles, and managing risk using dynamic trading strategies and derivative instruments.

Medicine (M.D.,C.M.) (200-204 credits)

Offered by: Medicine and Health Sciences (Faculty of Dental Medicine and Oral Health Sciences)

Degree: MDCM

Program Description

Conferral of the M.D., C.M. degree follows successful completion of the 4 curricular components of the MD, CM Program: Fundamentals of Medicine and Dentistry (year 1 and the first part of year 2), Transition to Clinical Practice (second part of year 2), Clerkship (years 3 and 4) and Physicianship (longitudinal throughout all 4 years). Program objectives are based on clinical presentations and competencies essential to the practice of medicine, as defined by Canadian authorities (e.g.

Medical Council of Canada, Royal College of Physicians and Surgeons of Canada and the College of family Physicians of Canada). Graduates are expected to be able to function responsibly, in a supervised clinical setting, at the level of an "undifferentiated" physician (see <http://www.mcgill.ca/ugme/mdcm-curriculum-joint-programs>).

Note: The M.D., C.M. graduate may apply for a license only to practice medicine in a supervised (postgraduate residency training program) setting, and not for independent practice.

Doctor of Medicine & Master of Surgery with Ph.D. (Joint M.D.,C.M. & Ph.D.)

Offered by: Medicine and Health Sciences (Faculty of Dental Medicine and Oral Health Sciences)

Degree: MDCM

Program Description

Students interested in a research career in academic medicine may wish to apply for admission to the joint M.D.,C.M. & Ph.D. program. This is a seven-year program in which the basic and clinical sciences portion of the medical curriculum are completed from September of Year One to December 31 of Year Two, prior to the beginning of full-time graduate studies. The latter are expected to last three, but no more than four, years by which time all course work and the research requirements for the Ph.D. degree must have been completed and a thesis submitted. The defence of the thesis will ordinarily take place at a later date. From January of Year Five to May of Year Seven, students will complete the requirements for the M.D.,C.M. degree. Throughout the seven years, students in the M.D.,C.M. & Ph.D. program meet each Thursday evening during the academic year to discuss their research, hear research seminars from clinician-scientists, and network with other students in the program.

Once accepted to the M.D.,C.M. & Ph.D. program and during the first year of the combined program, students begin the process of choosing a supervisor and research laboratory for their Ph.D. studies. The McGill Faculty of Medicine and Health Sciences Winter and Summer Research Bursary provide excellent opportunities for exploring potential laboratories. Research is usually carried out on a topic in the

biomedical sciences within one of the Basic Science or Clinical Science Departments within the Faculty of Medicine and Health Sciences. With the help of the M.D.,C.M. & Ph.D. Program Advisory Committee, students must choose a supervisor and department for their Ph.D. studies by September of Year Two and be accepted for admission to graduate studies by McGill Graduate and Postdoctoral Studies.

The language of instruction is English.

Please refer to the full M.D.,C.M. curriculum (p. 622).

Medicine & Oral and Maxillofacial Surgery (Joint M.D.,C.M. & O.M.F.S.)

Offered by: Medicine and Health Sciences (Faculty of Dental Medicine and Oral Health Sciences)

Degree: MDCM

Program Description

McGill University, through the Faculty of Medicine and Health Sciences and the Faculty of Dental Medicine and Oral Health Sciences, offers a joint M.D.,C.M. & Oral and Maxillofacial Surgery Program. Upon successful completion of this six-year program, students will receive an M.D.,C.M. degree from the Faculty of Medicine and Health Sciences and a Certificate in Oral and Maxillofacial Surgery from the Faculty of Dental Medicine and Oral Health Sciences. The program is fully accredited by the Commission on Dental Accreditation of Canada. The M.D.,C.M. degree is fully accredited by the Liaison Committee for Medical Education and the Council on Accreditation of Canadian Medical Schools.

The program is based at the McGill University Health Centre (MUHC), The Montreal General Hospital, which is a level-one trauma centre, serving downtown Montreal and surrounding areas. The MUHC is one of the most comprehensive university centres in North America. Each year it receives over 802,000 ambulatory visits including 134,000 emergency department visits.

The language of instruction is English.

Please refer to the full M.D.,C.M. curriculum (p. 622).

For more detailed information, see: www.mcgill.ca/dentistry/6-year-integrated-mdcm-omfs-residency-program.

Medicine Preparatory Program (Med-P Program)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program Description

The Faculty of Medicine and Health Sciences offers a special program for immediate graduates of the Quebec Collegial (CEGEP) system, which consists of one year of coursework in the Faculty of Science followed by the standard four-year M.D.,C.M. program. During the Med-P year, students are registered in the Faculty of Science. All campus-wide services including student advising, tutorship, financial aid, and academic support are available to Med-P students.

The Med-P curriculum consists of courses in molecular biology, cell biology and metabolism, organic chemistry (where applicable), along with a selection of courses in fields such as computer science, intermediate chemistry, physiology, and mathematics. Students are required to take courses in the Humanities and Social Sciences, along with electives of their choosing for the purpose of broadening and enriching their education.

In order to successfully complete the Med-P year and to be admitted to the M.D.,C.M. program, students must obtain a minimum of a "B" grade in each of the compulsory courses and a minimum cumulative grade point average (CGPA) of 3.5. Students who do not meet the above criteria are subject to review and may be: (a) admitted with or without conditions; (b) required to pursue a second preparatory year, or (c) invited to re-apply for admission upon completion of an undergraduate (Bachelor's degree).

There are many more applicants for the Med-P program than can be accepted. Unsuccessful applicants are generally well-qualified for admission into other undergraduate degree programs (e.g., B.A., B.Sc., etc.). In their own interest, all applicants are encouraged to apply to an alternate program. This can be done by making a second program selection when submitting an online application via Minerva.

The program is offered by the Faculty of Science in English on McGill's Montreal campus, and Gatineau, Quebec in French in partnership with Université du Québec en Outaouais. Students completing the Med-P year in Gatineau continue to the MDCM program in French at Campus Outaouais.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Other Programs Offered Within the Faculty of Medicine and Health Sciences

Bachelor of Science (B.Sc.) Programs

For Bachelor of Science (B.Sc.) programs available from the departments in the Faculty of Medicine and Health Sciences, consult the Faculty of Science undergraduate section.

Graduate Studies and Research in the Medical Sciences

Opportunities for graduate work in the basic medical and clinical sciences leading to the degree of **Ph.D.** are offered by many of the departments of the Faculty of Medicine and Health Sciences; for information about graduate programs offered, consult the Graduate section of the Faculty of Medicine and Health Sciences.

By special arrangement, a combined **M.D.,C.M. & Ph.D.** program is available (see Doctor of Medicine & Master of Surgery with Ph.D. (Joint M.D.,C.M. & Ph.D.) (p. 623)). Details of professional programs available can be found at About Medical Programs.

Research in clinical disciplines is carried out at all locations of the McGill University Health Centre:

- MUHC Glen Site;
- Montreal General Hospital;
- Montreal Neurological Institute and Hospital.

Research opportunities are also available at the Lady Davis Institute of the Jewish General Hospital, the Douglas Mental Health University Institute, and the Shriners Hospital for Children. For administrative purposes, graduate work in several clinical departments is grouped under the Division of Experimental Medicine and the Division of Surgical and Interventional Sciences. Other departments administer individual graduate programs. Consult the Faculty of Medicine and Health Sciences Graduate sections for a description of the programs, or consult the full list of Schools, Departments, and Other Units within the Faculty of Medicine and Health Sciences to view their respective websites.

Inquiries concerning research training in the medical sciences should be directed to the Chair or Graduate Program Director of the department in which the candidates wish to receive their graduate education.

Graduate Training Programs in the Clinical Departments

The Faculty of Medicine and Health Sciences, in conjunction with the affiliated teaching hospitals, offers a wide variety of programs leading to McGill Certificates of Residency Training and certification by the *Collège des médecins du Québec* (CMQ), the College of Family Physicians of Canada, and the Royal College of Physicians and Surgeons of Canada. For information on the graduate medical programs available, their eligibility requirements, and funding opportunities, please consult mcgill.ca/pgme.

Applied Performance Sciences Minor (B.Mus.) (18 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 18

Program Description

The B.Mus. Minor in Applied Performance Sciences is an introduction to key topics in performance science and how they are applied to music practice, performance, creation, and education. The program

offers opportunities to explore new intersections between music and applied sciences by examining topics related to optimal performance, healthy playing and singing, as well as physical, psychological, and social determinants in music development, learning, and performance, and applied research approaches. This program focuses on developing scientific awareness and applying scientific knowledge to music learning, performing, and teaching practices.

Composition Major (B.Mus.) (124 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 124

Program Description

The Bachelor of Music (B.Mus.); Major in Composition program offers students a solid grounding in the basics of classical music composition for instruments and voices, with or without electronics. This is achieved through lecture courses and tutorials (private composition lessons in the third and fourth years of the program). The study of topics related to music theory helps to hone students' compositional technique, while the study of topics related to music history helps to develop students' critical thinking skills. Free elective courses allow students either to focus on an area of secondary interest as a minor degree, or to pursue a broader range of course offerings, either within or outside the Schulich School of Music. To ensure consistent performance throughout their program, students are required to achieve a minimum grade of B- in courses given by the Composition Area.

Program Prerequisites - Freshman Program (32 credits)

32 credits selected as described below, in consultation with the Program Adviser:

22 credits of Prerequisite Courses

4 credits of Large Ensemble

6 credits of Non-Music Electives

Faculty Program Music - Jazz (B.Mus.) (123 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 123

Program Description

The Bachelor of Music (B.Mus.); Faculty Program in Music; Jazz requires 123 credits and has been designed to accommodate students who trained as jazz musicians and who are interested in a pattern of specialization not provided in the established major programs, or who are interested in combining studies in music with studies in other disciplines. Students registered in the Faculty Program in Music; Jazz may, with the approval of a staff adviser, design their own programs around specific interests or develop programs with a broader base by incorporating courses from other disciplines and faculties.

Program Prerequisites - Freshman Program (32 credits)

32 credits selected as described below, in consultation with the Program Adviser:

22 credits of Prerequisite courses

4 credits of Large Ensemble

6 credits of non-Music electives

Prerequisite Courses

22 credits, all of the courses below:

Note: Students who can demonstrate through auditions, placement tests or equivalencies that they have mastered the material in any of the courses below will be exempt from them and may proceed to more advanced courses.

Music Education / Music Elementary and Secondary Concurrent Major (B.Mus./B.Ed.) (170 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 170

Program Description

****This program is currently not offered.****

The Concurrent B.Mus./B.Ed. combines the Bachelor of Music (Major Music Education) with the Bachelor of Education (Music Elementary and Secondary).

Requirements are normally completed in five years and lead to certification as a school teacher in the Province of Quebec. Out-of-province students (or those without Quebec CEGEP, French Baccalaureate, International Baccalaureate, or at least one year of university studies prior to commencing the Concurrent program) are required to complete 170 credits, normally in six years.

Applicants who already hold a Bachelor of Music degree from a North American university should apply directly to the Bachelor of Education in Music Elementary and Secondary (B.Ed. Music) program offered by the Faculty of Education <https://www.mcgill.ca/dise/progs/music>.

Notes:

1. Students majoring in Music Education in the jazz stream may take Jazz Arranging 1 (MUJZ 260 Jazz Arranging 1.) with the permission of the instructor, per available space in the course, and if they have the prerequisite, MUJZ 161 Jazz Materials 2.. Alternatively, they may be asked to register for a different jazz stream course upon the recommendation of the Jazz Area Chair and/or the Music Education Area Chair.
2. In addition to meeting prerequisites/co-requisites for MUCO 230 The Art of Composition. or MUCO 261 Orchestration 1., students must obtain the relevant instructor's permission, per available space in the course, prior to registration. MUCO 260 Instruments of

The B.Mus. Major Music Education program in the Schulich School of Music focuses on the development of prospective music educators as musicians. This is achieved both through core music history, theory, musicianship, and performance courses, as well as through different instrumental, vocal, and conducting techniques courses. Laboratory experiences provide an opportunity to develop facility with basic music rehearsing/teaching techniques, with emphasis on the ability to diagnose and correct technical and musical problems. The B.Ed. Music Elementary and Secondary program in the Faculty of Education focuses on the development of the musicians as educators. This is achieved through courses in educational foundations, music pedagogy, pedagogical support, and a practicum component comprised of four field experiences and supporting professional seminars.

The components of the 137-credit Concurrent Bachelor of Music - Major Music Education and Bachelor of Education - Music Elementary and Secondary (excluding the 33-credit Freshman Program) are as follows:

58 credits in Education

71 credits in Music

8 free elective credits

Program Prerequisites - Freshman Program

32 credits distributed as follows:

Prerequisite Courses

4 credits of Large Ensemble

6 credits of non-Music electives

and 22 credits in the following course list:

Students who can demonstrate through placement tests or equivalencies that they have mastered the material in any of the courses below will be exempt from them and may proceed to more advanced courses. The list of courses for which students may take a diagnostic test to seek exemption can be found on the placement exam website.

Music Entrepreneurship Minor (B.Mus.) (18 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 18

Program Description

This Minor is a collaboration between the Schulich School of Music and Desautels Faculty of Management. It is designed to provide music students with an understanding of how to conceptualize, develop, and manage successful new ventures; manage their careers as performers, music teachers and arts administrators; and develop skills in marketing, fundraising, publicizing, and financing. The program covers the essentials of management and is multidisciplinary and integrative.

This Minor is restricted to B.Mus. students who have completed one year of studies and have a minimum CGPA of 3.0. The minor has limited enrolment; interested students should contact the Music Research Department to apply for admission. Students in this Minor are not permitted to take the Desautels Minors in Management, Marketing, Finance or Operations Management (for Non-Management Students).

Music History Major (B.Mus.) (124 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 124

Program Description

The Bachelor of Music (B.Mus.); Major in Music History requires 124 credits. This program focuses on the place of music in different cultural contexts, the social conditions of musicians, the evolution of performing styles, and the different ways music can project meaning and reflect identity, including the parameters of different musical styles and musical syntax. Exposure to a wide variety of repertoire in the Western classical tradition as well as to jazz and popular idioms.

Music History provides excellent preparation not only for graduate study in musicology, but also for a considerable range of professional training programs including journalism, information sciences, arts administration, and teaching.

The Bachelor of Music (B.Mus.); Major in Music History program requires 92 credits (plus 32 credits for the Freshman requirement for out-of-province students).

Program Prerequisites - Freshman Program (32 credits)

32 credits selected as described below, in consultation with the Program Adviser:

Musical Applications of Technology Minor (B.Mus.) (18 credits)

Offered by: Music (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 18

Program Description

The goal of this Minor is to provide instruction in practical and creative applications of technology for musical purposes. This program will help prepare students for production-oriented jobs in the creative arts.

This program is open to students from any discipline and has no prerequisites other than familiarity with computers. Applications will only be considered for fall admission. Late applications will not be accepted and no students will be admitted to the Minor in January. Registration will be limited to available lab space. To apply, submit an online application through the Music website: www.mcgill.ca/music/programs/minor/mat.

Students will be selected on the basis of their previous background or experience in music technology and/or sound recording, their computer programming skills, their expressed interest in the program, and their Cumulative Grade Point Average.

Advising for the Minor is available from the Area Chair for the Music Technology Program. Further information on this program is available on the Music Technology website at: http://www.music.mcgill.ca/musictech/programmes_and_admissions.

Musical Science and Technology Minor (B.Mus.) (18 credits)

Offered by: Music (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 18

Program Description

This Minor focuses on interdisciplinary topics in science and technology as applied to music. The goal of the program is to help prepare students for commercial jobs in the audio technology sector and/or for subsequent graduate research study. This Minor is designed to serve students who already have a good background in the sciences and prior experience with Math and Computer Science courses.

Applications will only be considered for fall admission. Late applications will not be accepted and no students will be admitted to the Minor in January. Registration will be limited to available lab space. Selection is based on previous experience in math, computer programming, and related sciences, expressed interest in the program, and Cumulative Grade Point Average. To apply, submit an online application through the Music website: www.mcgill.ca/music/programs/minor/mst.

Advising for the Minor is available from the Area Chair for the Music Technology program. Further information on this program is available on the Music Technology website at: http://www.music.mcgill.ca/musictech/programmes_and_admissions.

Theory Major (B.Mus.) (124 credits)

Offered by: Music Research (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 124

Program Description

The Bachelor of Music (B.Mus.); Major Theory program requires 124 credits and features coursework centered in the development of models and methods of musical languages. How specific pieces of music are put together and how this may be generalized to relate to the way other pieces of music are composed. Theory incorporates a combination of writing skills and analysis. Specialization in such subjects as the application of mathematical models to music analysis and Renaissance-style counterpoint.

Performance Piano Major (B.Mus.) (125 credits)

Offered by: Performance (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 125

Program Description

The Bachelor of Music; Major Performance (Piano) program provides comprehensive training in the practical and theoretical elements of music. Throughout the program, students receive individual instruction and participate in large and small ensembles.

The Bachelor of Music (B.Mus.) - Major Performance (Piano) program requires 91 credits (plus 34 credits for the freshman requirement for out-of-province students).

Special Requirements

Continuation in the program requires a minimum grade of B- in practical instruction/exams and ensembles.

Program Prerequisites - Freshman Program (34 credits)

34 credits selected as described below, in consultation with the Program Adviser:

22 credits of Prerequisite Courses

2 credits of Assigned Small Ensemble

4 credits of Large Ensemble

6 credits of Non-Music Electives

Prerequisite Courses

22 credits, all of the courses below:

Note: Students who can demonstrate through auditions, placement tests, and equivalencies that they have mastered the material in any of the courses below will be exempt from them and may proceed to more advanced courses.

Students who have been admitted to a degree or diploma program with keyboard as their principal instrument are exempt from MUSP 170 Musicianship (Keyboard) 1. and MUSP 171 Musicianship (Keyboard) 2.; see section on Keyboard Proficiency testing for complete information.

Performance Voice Major (B.Mus.) (123 credits)

Offered by: Performance (Schulich School of Music)

Degree: Bachelor of Music

Program credit weight: 123

Program Description

The Bachelor of Music; Major Performance (Voice) program focuses on vocal pedagogy, repertoire coaching, linguist, theory, and musicology to strengthen artistry in professional singing. In addition to recitals and masterclasses, students are encouraged to take advantage of diverse solo performance opportunities in Opera, Early Music Ensembles, Song Interpretation, a comprehensive Choral Program, the annual McGill Concerto and Wirth Vocal Competitions, and outside venues in Montreal.

The Bachelor of Music (B.Mus.) - Major Performance (Voice) program requires 91 credits (plus 32 credits for the Freshman requirement for out-of-province students).

Special Requirements

Continuation in the program requires a minimum grade of B- in practical instruction/exams, ensembles, and voice coaching.

Program Prerequisites - Freshman Program (32 credits)

Jazz Arranging and Composition Minor (B.Mus.) (18 credits)

Degree: Bachelor of Music
Program credit weight: 18

Program Description

The Minor in Jazz Arranging and Composition allows B.Mus. students who are not Jazz majors to explore the jazz idiom with an emphasis on arranging composition and jazz theory. In theory courses, students are trained in fundamental jazz materials, compose jazz tunes, and develop analytical skills; in arranging courses, they gain practical experience by writing for various small and large jazz ensembles; and in the jazz history course, they explore the repertoire and history of the jazz tradition. The program is aimed primarily at classical students who love jazz and who have already acquired facility with rudimentary classical materials.

Nursing (B.Sc.(N.)) (103 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Degree: BSCNUR

Program credit weight: 103

Program Description

The B.Sc.(N.) is a 3-4 year program (including summer sessions) that focuses on complex and contemporary nursing issues. As a preparation for a nursing career, the program includes innovative courses on fundamental nursing expertise, skills and critical thinking. Completion of this program entitles successful graduates to sit licensure examinations in Quebec, Canada, and other countries. This program is accredited by the Canadian Association of Schools of Nursing.

These courses are to be completed prior to entering third year (U3). The complementary credits are chosen from the following areas:

- Psychology
- Management (in the area of personnel and private practice management)
- Academic Writing
- Sociology/Anthropology courses
- French or English second language course if not proficient in French or English (maximum of 6 credits)
- Students may also take a 3-credit Sports Medicine Practicum course as part of the complementary courses. (Selection interview required for Sports Medicine Practicum.)
- Maximum of 3 credits of a personal interest course.

POTH 455	Neurophysiology.	3	Option 2) 3 courses from MATH and 3 courses from BIOL, CHEM or PHYS.
POTH 563	Foundations of Professional Practice.	3	

- ¹ Students may choose ANAT 321 Circuitry of the Human Brain, or ANAT 323 Clinical Neuroanatomy, but not both.

Complementary Courses (6-9 credits)

These courses are to be completed prior to entering third year (U3). The complementary credits are chosen from the following subject areas:

- Psychology
- Management (in the area of personnel and private practice management)
- Academic Writing
- Sociology/Anthropology courses
- French or English second language course if not proficient in French or English (maximum of 6 credits)
- Students may take PHTH 301 Sports Medicine Practicum. (3 credits) as a U2 complementary course.

Elective Course (0-3 credits)

- Maximum of one 3-credit elective (personal interest) course.

Foundation Program (30 credits)

Offered by: Science

Degree: Bachelor of Science

Program credit weight: 30

Program Description

Students who need 97-120 credits to complete their degree requirements will normally be registered in the Science Foundation Program until they complete their first year. They must consult an adviser in the Science Office for Undergraduate Student Advising (SOUSA) to obtain advice and approval of their course selection.

Full details are available on the SOUSA website at <http://www.mcgill.ca/science/student/newstudents/u0>. Academic advising is also available by email. The address is newstudentadvising.science@mcgill.ca.

Students normally complete 30 credits which must include at least seven courses from the list of Approved Freshman/Foundation Year Science Courses, selected as follows:

General Math and Science Breadth

Six of the Freshman/Foundation Year courses to satisfy one of the following:

Option 1) 2 courses from MATH and 4 courses from BIOL, CHEM or PHYS;
or

- 3 Option 2) 3 courses from MATH and 3 courses from BIOL, CHEM or PHYS.

Science Complementary

The seventh course is chosen from the list of Approved Freshman/Foundation Year Science Courses.

Notes:

1. Students who have not studied all of Biology, Chemistry, and Physics at the grade 12 level or equivalent are strongly advised to include at least one course in the missing discipline in their Freshman/Foundation Year.
2. Many students will complete more than seven courses from the Approved Freshman/Foundation Year Science Courses list, particularly those who wish to leave several options open for their choice of major.
3. Students entering the Freshman/Foundation Year should be aware of the department specific requirements when selecting their courses. Detailed advising information is available at <https://www.mcgill.ca/sousa/newstudents/courseselection/bscu0>.
4. The maximum number of courses per term, required, complementary, and elective, is five.
5. Some medical and dental schools have specific freshman course requirements. Check the admission requirements of the school(s) to which you intend to apply.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Electives

Students wishing to take elective courses may choose them from introductory courses offered by departments in the Faculties of Science or of Arts. A list of recommended courses is found at <http://www.mcgill.ca/science/student/newstudents/u0/bscfreshman/> suggested... Certain courses offered by other faculties may also be taken, but some restrictions apply. Consult the SOUSA website at <http://www.mcgill.ca/science/student/continuingstudents/bsc/outside/> for more information about taking courses from other faculties.

Anatomy and Cell Biology Major (B.Sc.) (67 credits)

Offered by: Anatomy and Cell Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 67

Program Description

The B.Sc.; Major in Anatomy and Cell Biology focuses on the fundamentals of biomedical science, with a strong foundation in cell and molecular biology, as well as the essential concepts of

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Anatomy and Cell Biology Liberal Program - Core Science Component (B.Sc.) (47-48 credits)

Offered by: Anatomy and Cell Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 47-48

Program Description

The B.Sc.; Liberal Program - Core Science Component in Anatomy and Cell Biology is a flexible program that focuses on the fundamentals of cell and molecular biology and human anatomy. The program includes a range of biomedical science disciplines such as biology, experimental medicine, pharmacology and neurobiology. Students may complete this program with a minimum of 47 credits or a maximum of 48 credits depending on their choice of complementary courses.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Anatomy and Cell Biology Honours (B.Sc.) (73 credits)

Offered by: Anatomy and Cell Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 73

Program Description

Students should register at the Major level in U1 and, if accepted, may enter the Honours program at the beginning of U2. To enter the program, the student must obtain a CGPA of at least 3.20 at the end of U1. For promotion to the U3 year of the Honours program, or for entry into the program at this level, the student must have a CGPA of at least 3.20 at the end of their U2 year. It is expected that at the beginning of the third year, the students who wish to continue in the Honours program will be those who feel that they are seriously interested in a career in Cell Biology. The Honours degree will be recommended after successful completion of the program with a CGPA of at least 3.20.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Atmospheric Science Major (B.Sc.) (62 credits)

Offered by: Atmospheric & Oceanic Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 62

Program Description

(60-63 credits)

The B.Sc.; Major in Atmospheric Science provides the fundamentals of atmospheric physics and dynamics along with applications to weather and climate problems. The program includes the choice of a wide selection of topics spanning from atmospheric chemistry, to weather forecasting and climate dynamics. The program may be completed in 60-63 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

Required Courses (24 credits)

Course	Title	Credits
ATOCH 214	Introduction: Physics of the Atmosphere.	3
ATOCH 312	Rotating Fluid Dynamics.	3
ATOCH 315	Thermodynamics and Convection.	3
COMP 208	Computer Programming for Physical Sciences and Engineering .	3
MATH 222	Calculus 3.	3
MATH 223	Linear Algebra.	3
MATH 314	Advanced Calculus.	3
MATH 315	Ordinary Differential Equations.	3

Complementary Courses (36-39 credits)

Note: Students are required to fulfill the core complementary requirements along with one of the four streams listed below. In cases of overlap, each course can only be used once toward the satisfaction of the core complementary courses or the chosen stream.

Core (21-22 credits)

3-6 credits selected from:

Course	Title	Credits
ATOCH 215	Oceans, Weather and Climate.	3
ATOCH 219	Introduction to Atmospheric Chemistry.	1
CHEM 219	Introduction to Atmospheric Chemistry.	3

¹ If chosen, students may take ATOC 219 Introduction to Atmospheric Chemistry. or CHEM 219 Introduction to Atmospheric Chemistry..

3 credits selected from:

Course	Title	Credits
ATOCH 357	Atmospheric and Oceanic Science Laboratory.	3
PHYS 257	Experimental Methods 1.	3

3 credits selected from:

Expand allContract all

Course	Title	Credits			
PHYS 230	Dynamics of Simple Systems.	3	ATOC 541	Synoptic Meteorology 2.	3
PHYS 251	Honours Classical Mechanics 1.	3	ATOC 546	Current Weather Discussion.	1

3 credits selected from:

Course	Title	Credits			
PHYS 232	Heat and Waves.	3	ATOC 404	Climate Physics. ¹	3
PHYS 253	Thermal Physics.	3	ATOC 512	Atmospheric and Oceanic Dynamics.	3

6-10 credits selected from:

Course	Title	Credits			
CHEM 213	Introductory Physical Chemistry 1: Thermodynamics.	3	ATOC 517	Boundary Layer Meteorology.	3
CHEM 273	Introductory Physical Chemistry 2: Kinetics and Methods.	3	ATOC 525	Atmospheric Radiation.	3
CHEM 367	Instrumental Analysis 1.	3	ATOC 531	Dynamics of Current Climates.	3
CHEM 575	Chemical Kinetics.	3	ATOC 548	Mesoscale Meteorology.	0-3
COMP 551	Applied Machine Learning. ¹	4	ATOC 558	Numerical Methods and Laboratory.	3
MATH 203	Principles of Statistics 1.	3	ATOC 568	Ocean Physics.	3
MATH 317	Numerical Analysis.	3	ESYS 300	Earth Data Analysis.	3
MATH 319	Partial Differential Equations .	3	ESYS 301	Earth System Modelling.	3
MATH 323	Probability. ¹	3	GEOG 322	Environmental Hydrology.	3
MATH 324	Statistics. ¹	3	GEOG 372	Running Water Environments.	3
PHYS 333	Thermal and Statistical Physics.	3	MATH 555	Fluid Dynamics. ²	4
PHYS 340	Majors Electricity and Magnetism. ³	3	PHYS 404	Climate Physics. ¹	3
PHYS 342	Majors Electromagnetic Waves.	3	PHYS 432	Physics of Fluids. ²	3
PHYS 350	Honours Electricity and Magnetism. ³	3	PHYS 512	Computational Physics with Applications.	3
PHYS 352	Honours Electromagnetic Waves.	3			

¹ If chosen, students may take either MATH 203 Principles of Statistics or MATH 324 Statistics..

² If chosen, students may take either PHYS 340 Majors Electricity and Magnetism. or PHYS 350 Honours Electricity and Magnetism..

³ If chosen, students may take either PHYS 342 Majors Electromagnetic Waves. and PHYS 352 Honours Electromagnetic Waves..

Streams

15-17 credits from one of the following streams:

Weather Analysis and Forecasting Stream (16-17 credits)

13 credits from:

Course	Title	Credits

Atmospheric Science and Physics Major (B.Sc.) (67 credits)

Offered by: Atmospheric & Oceanic Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 67

Program Description

(66-67 credits)

The B.Sc.; Major in Atmospheric Science and Physics provides a solid study in meteorology, atmospheric physics, or related fields.

The program is jointly offered by the Department of Physics and the Department of Atmospheric and Oceanic Sciences. Students should consult undergraduate advisers in both departments.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Atmospheric Science Honours (B.Sc.) (75 credits)

Offered by: Atmospheric & Oceanic Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 75

Program Description

72-75 credits

The B.Sc.; Honours in Atmospheric Science provides advanced training in atmospheric science, and it includes a research component.

Students can be admitted to the Honours program after completion of the U1 year of the Major in Atmospheric Science program with a minimum GPA of 3.30. Students having completed a U1 year in a different program with high standing may be admitted to the Honours program on the recommendation of that department.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Meteorology (Dip.) (30 credits)

Offered by: Atmospheric & Oceanic Sciences (Faculty of Science)

Degree: Diploma in Meteorology

Program credit weight: 30

Program Description

The Department offers an intensive, one-year program in theoretical and applied meteorology to B.Sc. or B.Eng. graduates of suitable standing in physics, applied mathematics or other appropriate disciplines, leading to a Diploma in Meteorology. The program is designed for students with little or no previous background in meteorology who wish to direct their experience to atmospheric or environmental applications, or who need to fulfill academic prerequisites in meteorology to qualify for employment. For further information, contact the Undergraduate Program Director (<https://www.mcgill.ca/meteo/facultystaff/staff>)

An exemption of up to 6 credits may be allowed for courses already taken. Students granted such exemptions are required to add complementary courses from an approved list to maintain a total credit count of 30 completed at McGill.

Biochemistry Honours (B.Sc.) (73 credits)

Offered by: Biochemistry (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 73

Program Description

Admission to the Honours program will not be granted until U2. Students who wish to enter the Honours program in U2 should follow the U1 Major program. Those who satisfactorily complete the U1 Major program with a GPA of at least 3.20 and a mark of B- or better in every required course are eligible for admission to the Honours program.

Students seeking admission to the Honours program must obtain permission from the Departmental Student Affairs Officer, Christine Laberge (christine.laberge@mcgill.ca), during the Add/Drop period in September of their second year.

Promotion to U3 year is based on satisfactory completion of U2 courses with a GPA of at least 3.20 and a mark of B- or better in every required course. In borderline cases, the marks received in BIOC 311 Metabolic Biochemistry, and BIOC 312 Biochemistry of Macromolecules, will be of particular importance for continuation in the U3 Honours year.

For graduation in the Honours program, students must complete a minimum of 90 credits, pass all required courses with no grade less than B-, and achieve a CGPA of at least 3.20.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Biology Minor (B.Sc.) (25 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 25

Program Description

The Minor Biology may be taken in conjunction with any primary program in the Faculty of Science (other than programs offered by the Department of Biology). Students are advised to consult the undergraduate adviser in Biology as early as possible (preferably during their first year), in order to plan their course selection.

See Nancy Nelson, Stewart Biology Building, 514-398-4109, email: nancy.nelson@mcgill.ca.

6 credits of overlap are allowed between the Minor and the primary program.

Required Courses (15 credits)

Course	Title	Credits
BIOL 200	Molecular Biology.	3
BIOL 201	Cell Biology and Metabolism.	3

Complementary Courses (10 credits)

Students complete a minimum of 9 or a maximum of 10 complementary course credits depending on their choice of complementary courses.

To include:

Expand allContract all

Course	Title	Credits
CHEM 212	Introductory Organic Chemistry 1.	1

¹ Students who have already taken CHEM 212 Introductory Organic Chemistry 1. or its equivalent will choose another appropriate course, to be approved by the Biology Adviser.

Plus an additional two courses from the Biology department's course offerings, at the 300 level or above.

Biology, Liberal Program - Core Science Component (47 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 47

Program Description

The Liberal Program - Core Science Component Biology is a flexible program focusing on the fundamentals of biology. Topics include a range of biological concepts spanning molecules and cells to organisms and ecosystems, including development, behaviour and evolution. This program is well suited to students with varied interests who do not want to focus solely on biology in their studies.

Students may complete this program with a minimum of 45 credits or a maximum of 47 credits depending on their choice of complementary courses.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are

met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

15 credits of Biology complementary courses at the 300-500 levels, including at least 3 credits at the 400-500 levels. Up to 6 credits may be from non-BIOL science courses, with Adviser permission. Up to 6 credits of independent research may be included.

Biology (B.Sc.) (59 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 59

Program Description

The Biology Major covers a range of fundamental biological concepts spanning molecules and cells to organisms and ecosystems, including development, behaviour and evolution. The areas of focus include:

1. molecular, cellular and developmental biology,
2. conservation, ecology and evolution, and
3. neurobiology and behaviour.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Biology - Quantitative Biology Major (B.Sc.) (73 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 73

Program Description

Interdisciplinary research that draws from the natural and physical sciences is an important aspect of modern biology. The Quantitative Biology option is designed for students with a deep interest in biology who wish to gain a strong grounding in physical sciences and their application to biological questions. The program has two options: an ecology and evolutionary biology stream, and a physical biology stream. Both streams provide a balance of theory and experimental components.

Students may complete this program with a minimum of 68 credits or a maximum of 73 credits depending on whether MATH 222 Calculus 3. and CHEM 212 Introductory Organic Chemistry 1. are completed.

Advising Notes for UO Students

It is highly recommended that freshman BIOL, CHEM, MATH, and PHYS courses be selected with the Program Adviser to ensure they meet the core requirements of the Quantitative Biology option.

This program is recommended for U1 students achieving a CGPA of 3.20 or better; and entering CEGEP students with a Math/Science R-score of 28.0 or better.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

Biology and Mathematics Major (B.Sc.) (76 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 76

Program Description

This program is built on a selection of mathematics and biology courses that recognize mathematical biology as a field of research, with two quantitative streams: Applied Mathematics and Statistics; and three streams within biology: Ecology and Evolutionary Biology, Molecular Evolution, and Neurosciences.

Degree Requirements — B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Required Courses (37 credits)

Bio-Physical Sciences Core

Expand allContract all

Course	Title	Credits
BIOL 219	Introduction to Physical Molecular and Cell Biology.	4

PSYC 427	Sensorimotor Neuroscience.	3

Remaining BIOL, NEUR, PHGY, PSYC

For the remaining BIOL, NEUR, PHGY, PSYC complementary course credits, if any, students top up their credits to the necessary 18-21 credits with any course listed in the above three streams. Other relevant courses may be substituted with the approval of the Program Advisor.

Biology Honours (B.Sc.) (72 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 72

Program Description

The Honours program in Biology is intended for students who are interested in gaining a concentrated research experience. A broad range of fundamental biological concepts spanning molecules and cells to organisms and ecosystems, including development, behaviour and evolution is supplemented with research in a chosen area. Potential areas of focus include:

1. molecular, cellular and developmental biology,
2. conservation, ecology and evolution, and
3. neurobiology and behaviour.

Acceptance into the Honours program at the end of U2 requires a CGPA of 3.50 and approval of a 9- or 12-credit Independent Studies proposal (see listing of BIOL 479D1 Honours Research Project 1./BIOL 479D2 Honours Research Project 1., BIOL 480D1 Honours Research Project 2./BIOL 480D2 Honours Research Project 2. for details). For an Honours degree, a minimum CGPA of 3.50 at Graduation and adherence to the program as outlined below are the additional requirements.

First Class Honours will be awarded to students graduating with a CGPA of 3.75 or better, and having successfully completed the Honours program

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Required Courses (35 credits)

Other (12-15 credits)

15 credits of Biology courses at the 300-500 levels if taking BIOL 479D1 Honours Research Project 1./BIOL 479D2 Honours Research Project 1., or 12 credits if taking BIOL 480D1 Honours Research Project 2./BIOL 480D2 Honours Research Project 2.. With permission of the Biology Adviser, up to 6 credits may be taken from other science department courses (300-500 levels). Up to 3 credits of previous independent research courses may be included. Must include 6 credits of 400-500 levels.

Biology - Quantitative Biology Honours (B.Sc.) (79 credits)

Offered by: Biology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 79

Program Description

Interdisciplinary research that draws from the natural and physical sciences is an important aspect of modern biology. The Quantitative Biology (QB) Honours option is designed for students with a deep interest in biology who wish to gain a strong grounding in physical sciences and their application to biological questions through both coursework and a research project. The QB B.Sc. Honours option has two streams: a theoretical ecology and evolutionary biology stream and a physical biology stream. Both streams provide a balance of theory and experimental components that along with a research component will provide outstanding preparation for graduate training. Students must attain a 3.50 CGPA to enter and to complete the Honours program. First Class Honours will be awarded to students in the QB Honours option graduating with a CGPA of 3.75 or greater.

Students may complete this program with a minimum of 74 credits or a maximum of 79 credits depending on whether MATH 222 Calculus 3. and CHEM 212 Introductory Organic Chemistry 1. are completed.

Advising Notes for U0 students

It is highly recommended that freshman BIOL, CHEM, MATH, and PHYS courses be selected with the Program Adviser to ensure they meet the core requirements of the Quantitative Biology option.

This program is recommended for U1 students achieving a CGPA of 3.20 or better; and entering CEGEP students with a Math/Science R-score of 28.0 or better.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Required Courses (49 credits)

Bio-Physical Sciences Core (31 credits)

Expand allContract all

Course	Title	Credits
BIOL 219	Introduction to Physical Molecular and Cell Biology.	4
BIOL 301	Cell and Molecular Laboratory.	4
BIOL 395	Quantitative Biology Seminar.	1

Complementary Courses (6 credits)

6 credits selected from any undergraduate courses offered by Chemical Engineering, excluding the following courses: CHEE 456 Design Project., CHEE 494 Research Project and Seminar 1., CHEE 495 Research Project and Seminar 2. and CHEE 496 Environmental Research Project..

Chemistry Minor (B.Sc.) (20 credits)

Offered by: Chemistry (Faculty of Science)**Degree:** Bachelor of Science; Bachelor of Arts and Science**Program credit weight:** 20

Program Description

The goal of this minor program is to provide interested B.Sc. students with a good grounding in chemistry through an introduction to one of the traditional sub-disciplines in chemistry (analytical, inorganic, organic, and physical).

Required Courses (13 credits)

If any of the required courses are part of your primary program or were taken at CEGEP, then they must be substituted by courses from the minor options list that are not part of your primary program. The total number of credits exclusive to the minor is at least 19.

Chemistry - General Liberal Program - Core Science Component (B.Sc.) (49 credits)

Offered by: Chemistry (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 49

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Pre-Program Prerequisites

Students entering from the Freshman program must have included CHEM 110 General Chemistry 1. and CHEM 120 General Chemistry 2., BIOL 112 Cell and Molecular Biology., MATH 133 Linear Algebra and Geometry., MATH 140 Calculus 1./MATH 141 Calculus 2. or MATH 150 Calculus A./MATH 151 Calculus B., PHYS 101 Introductory Physics - Mechanics./PHYS 102 Introductory Physics - Electromagnetism. or PHYS 131 Mechanics and Waves./PHYS 142 Electromagnetism and Optics., or their equivalents in their Freshman year. Quebec students must have completed the DEC with appropriate science and mathematics courses. Note that students who have successfully completed MATH 150 Calculus A. and MATH 151 Calculus B. do not have to take MATH 222 Calculus 3..

Required Basic Core Courses (43 credits)

The Liberal Program: Core Science Component Chemistry - General Option is not certified by the Ordre des chimistes du Québec. Students interested in pursuing a career in Chemistry in Quebec are advised to take an appropriate B.Sc. program in Chemistry.

A computer science course, either COMP 202 Foundations of Programming. or COMP 208 Computer Programming for Physical Sciences and Engineering ., is strongly recommended during U1 for students who have no previous introduction to computer programming. Students should contact their adviser on this matter.

Completion of Mathematics MATH 222 Calculus 3. during U1 is strongly recommended.

CHEM 493	Advanced Physical Chemistry Laboratory.	2
MATH 222	Calculus 3.	3
PHYS 242	Electricity and Magnetism.	2

¹ Denotes courses with CEGEP equivalents.

The courses are omitted from the program of students who have successfully completed them at the CEGEP level but the Chemistry courses must be replaced by courses in that discipline if students wish to be eligible for admission to the Ordre des chimistes du Québec. Students from outside Quebec or transfer students should consult the Academic Adviser.

See <http://www.mcgill.ca/chemistry/current-undergraduate-students/advising/>.

² Students who have successfully completed MATH 150 Calculus A.MATH 150 Calculus A. and MATH 151 Calculus B. are not required to take MATH 222 Calculus 3..

Complementary Courses (6 credits)

6 credits of Chemistry (CHEM) courses at the 400 level or higher, or MATH 315 plus 3 credits of Chemistry courses at the 400 level or higher.

Chemistry - Bio-organic Major (B.Sc.) (63 credits)

Offered by: Chemistry (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 63

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Pre-Program Prerequisites

Students entering from the Freshman program must have included CHEM 110 General Chemistry 1. and CHEM 120 General Chemistry 2., BIOL 112 Cell and Molecular Biology., MATH 133 Linear Algebra and Geometry., MATH 140 Calculus 1./MATH 141 Calculus 2. or MATH 150 Calculus A./MATH 151 Calculus B., PHYS 101 Introductory Physics - Mechanics./PHYS 102 Introductory Physics - Electromagnetism. or PHYS 131 Mechanics and Waves./PHYS 142 Electromagnetism and Optics., or their equivalents in their Freshman year. Quebec

students must have completed the DEC with appropriate science and mathematics courses. Note that students who have successfully completed MATH 150 Calculus A. and MATH 151 Calculus B. do not have to take MATH 222 Calculus 3..

Required Courses (57 credits)

A computer science course, either COMP 202 Foundations of Programming, or COMP 208 Computer Programming for Physical Sciences and Engineering , is strongly recommended during U1 for students who have no previous introduction to computer programming. Students should contact their adviser on this matter. Completion of Mathematics MATH 222 Calculus 3. during U1 is also strongly recommended.

Chemistry: Biophysical Chemistry Major (B.Sc.) (66 credits)

Offered by: Chemistry (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

This program trains students in the fundamentals of chemistry and develops the physical science, computational, and mathematical skills needed for advanced biophysical chemistry research in the biomedical and biotechnology industries. The program features integrative, interdisciplinary courses in bio-physical sciences. The program may be completed in 65 or 66 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Cognitive Science Minor (B.Sc.) (24 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 24

Program Description

The Minor Cognitive Science is intended to allow students in the Faculty of Arts or the Faculty of Science to explore the interdisciplinary study of cognition. The goal is to understand the principles of intelligence with the hope that this will lead to a better understanding of the mind and learning.

Students wishing to complete this Minor should contact the Cognitive Science Program Adviser if there are any questions about the requirements at <https://www.mcgill.ca/science/undergraduate/advice/sousa>.

Required Course (3 credits)

PSYC 433 Cognitive Science.

Complementary Courses (21 credits)

Note:

Students must take a minimum of 6 credits at the 400 to 500 level.

Students may not take any courses from their home department(s).

Students complete a minimum of 9 credits each in two areas.

Computer Science Minor (B.Sc.) (24 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 24

Program Description

Students must obtain approval from their main program adviser, and are also strongly encouraged to speak with a School of Computer Science adviser before choosing complementary courses. A particular course selection must be approved before the student registers for their final term of studies.

Students should note that COMP 251 Algorithms and Data Structures. is a prerequisite for many upper level COMP courses. Upper level COMP courses may have prerequisites that are not part of the Minor such as MATH 222 Calculus 3., MATH 223 Linear Algebra., or MATH 323 Probability.. Students will not get credit for these courses toward the Minor.

Students may receive up to 6 credits toward the Minor by taking certain approved courses outside the School of Computer Science. These courses must have a high computer science content and must be approved by the School of Computer Science in advance. If a student's Major program requires Computer Science courses, up to 6 credits of Computer Science courses may be used to fulfill both Major and Minor requirements.

Required Courses (9 credits)

Computer Science Liberal Program - Core Science Component (B.Sc.) (45 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 45

Program Description

This program provides an introduction to the principles of computer science and offers opportunity to get insight into some of its sub-areas. Having only 45 credits, it allows students to combine it with minor or major concentrations in other disciplines.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

The remaining complementary credits must be selected from any COMP courses at the 300 level or above except COMP 396 Undergraduate Research Project..

Software Engineering Liberal Program - Core Science Component (B.Sc.) (49 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 49

Program Description

This program covers a core of programming and software engineering courses and allows students to select courses that aim at practical aspects of software development.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Required Courses (36 credits)

Course	Title	Credits
COMP 202	Foundations of Programming. ¹	3
COMP 206	Introduction to Software Systems.	3
COMP 250	Introduction to Computer Science.	3
COMP 251	Algorithms and Data Structures.	3
COMP 273	Introduction to Computer Systems.	3
COMP 302	Programming Languages and Paradigms.	3
COMP 303	Software Design.	3
COMP 310	Operating Systems.	3
COMP 361D1	Software Engineering Project.	3
COMP 361D2	Software Engineering Project.	3
MATH 223	Linear Algebra.	3
MATH 240	Discrete Structures.	3

¹ Students who have sufficient knowledge in a programming language do not need to take COMP 202 Foundations of Programming. and can replace it with additional computer science complementary course credits.

Complementary Courses (13 credits)

3 credits selected from:

Course	Title	Credits
COMP 330	Theory of Computation.	3
COMP 360	Algorithm Design.	3

10 credits from:

Course	Title	Credits
COMP 322	Introduction to C++.	1
COMP 409	Concurrent Programming.	3
COMP 421	Database Systems.	3
COMP 520	Compiler Design.	4
COMP 525	Formal Verification.	3
COMP 529	Software Architecture.	4
COMP 533	Model-Driven Software Development.	3
COMP 535	Computer Networks 1.	4
ECSE 326	Software Requirements Engineering.	3

ECSE 437	Software Delivery.	3
ECSE 539	Advanced Software Language Engineering.	4

Or any COMP courses at the 300 level or above (excluding COMP 396 Undergraduate Research Project..)

Computer Science Major (B.Sc.) (63 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 63

Program Description

This program is the standard Major program offered by the School of Computer Science. It provides a broad introduction to the principles of computer science and offers ample opportunity to acquire in-depth knowledge of several sub-disciplines. At the same time, its credit requirements allow students to take an additional minor.

Students may complete this program with a minimum of 60 credits or a maximum of 63 credits depending if they are exempt from taking COMP 202 Foundations of Programming..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Required Courses (33 credits)

Expand allContract all

Course	Title	Credits
COMP 202	Foundations of Programming. ¹	3

MATH 340	Discrete Mathematics.	3

¹ Must include at least one of MATH 323 Probability. and MATH 340 Discrete Mathematics..

At least 6 credits at the 400-level or above.

The remaining credits selected from computer science courses at the 300 level or above (except COMP 396 Undergraduate Research Project.) and ECSE 539 Advanced Software Language Engineering..

Note: Students have to make sure that they have the appropriate prerequisites when choosing upper-level courses.

Computer Science - Artificial Intelligence Major (B.Sc.) (63 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 63

Program Description

The B.Sc.; Major in Computer Science: Artificial Intelligence focuses on topics that relate to artificial intelligence and machine learning, including both foundations and applications. Students may complete this program with a minimum of 63 credits or a maximum of 68 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Computer Science and Biology Major (B.Sc.) (74 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 74

Program Description

This program will focus on the fundamentals of biology and the computational and mathematical skills needed to manage, analyze, and model large biological datasets.

Students may complete this program with a minimum of 63 credits and maximum of 74.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

U0 (freshman) students should take:

Expand allContract all		
Course	Title	Credits
BIOL 111 & BIOL 112	Principles: Organismal Biology and Cell and Molecular Biology.	6
CHEM 110 & CHEM 120	General Chemistry 1. and General Chemistry 2.	8
MATH 133	Linear Algebra and Geometry.	3
MATH 140 & MATH 141	Calculus 1. and Calculus 2.	7-8
or MATH 150 & MATH 151	Calculus A. and Calculus B.	
PHYS 101 & PHYS 102	Introductory Physics - Mechanics. and Introductory Physics - Electromagnetism.	8
or PHYS 131 & PHYS 142	Mechanics and Waves. and Electromagnetism and Optics.	

Note that MATH 150 Calculus A.-MATH 151 Calculus B. provides equivalence for required course MATH 222 Calculus 3..

Students who do not have a background in computer programming at the level of COMP 202 Foundations of Programming. or COMP 204 Computer Programming for Life Sciences. must take one of these courses. COMP 204 Computer Programming for Life Sciences. is considered equivalent to COMP 202 Foundations of Programming. as a prerequisite for COMP 206 Introduction to Software Systems. and COMP 250 Introduction to Computer Science..

Required Courses (46 credits)

36-46 credits:

Computer Science - Computer Games Major (B.Sc.) (65 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 65

Program Description

This program is a specialization within Computer Science. It fulfills all the basic requirements of the Major Computer Science. The program focuses on topics that are important to understanding the technology behind computer games and to gaining experience in software development and design needed for computer game development.

Students may complete this program with a minimum of 62 credits or a maximum of 65 credits depending on whether they are exempt from taking COMP 202 Foundations of Programming..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
 - The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.
- Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Computer Science Honours (B.Sc.) (75 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 75

Program Description

This program provides a more advanced version of the Major Computer Science program. It focuses on a more advanced and theory-based algorithms and computer science content, and it includes a required project.

Students may complete this program with a minimum of 72 credits or a maximum of 75 credits.

Honours students must maintain a CGPA of at least 3.00 during their studies and at graduation.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Computer Science and Biology Honours (B.Sc.) (77 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 77

Program Description

This program focuses on the fundamentals of biology with a focus on molecular biology, and gives them computational and mathematical skills needed to manage, analyze, and model large biological datasets. Compared to the Joint Major counterpart, this program requires additional research credits and a larger number of advanced courses. Students must maintain a minimum CGPA of 3.5. To graduate with First Class Honours, the CGPA must be at least 3.75.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Software Engineering Major (B.Sc.) (63 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 63

Program Description

This program provides a broad introduction to the principles of computer science and covers in depth the design and development of software systems.

Students may complete this program with a maximum of 63 credits or a minimum of 60 credits if they are exempt from taking COMP 202 Foundations of Programming..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Required Courses (36-39 credits)

Expand allContract all

Course	Title	Credits
COMP 202	Foundations of Programming. ¹	3
COMP 206	Introduction to Software Systems.	3
COMP 250	Introduction to Computer Science.	3
COMP 251	Algorithms and Data Structures.	3
COMP 273	Introduction to Computer Systems.	3
COMP 302	Programming Languages and Paradigms.	3
COMP 303	Software Design.	3
COMP 310	Operating Systems.	3
COMP 361D1	Software Engineering Project.	3
COMP 361D2	Software Engineering Project.	3
ECSE 429	Software Validation.	3
MATH 223	Linear Algebra.	3
MATH 240	Discrete Structures.	3

¹ Students who have sufficient knowledge in a programming language do not need to take COMP 202 Foundations of Programming..

Complementary Courses (24 credits)

9 credits selected from Groups A and B, with at least 3 credits selected from each:

15 credits selected from Groups C and D, with at least 9 credits selected from Group C, and at least 3 credits selected from Group D.

Software Engineering Honours (B.Sc.) (75 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 75

Program Description

This program provides a more challenging and research-oriented version of the Major Software Engineering program.

Students may complete this program with a maximum of 75 credits or a minimum of 72 credits if they are exempt from taking COMP 202 Foundations of Programming..

Honours students must maintain a CGPA of at least 3.00 during their studies and at graduation.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Earth and Planetary Sciences Liberal Program - Core Science Component (B.Sc.) (45 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 45

Program Description

The B.Sc. (Liberal) program in Earth and Planetary Sciences provides the graduate with a solid core of knowledge of Geology, Geophysics, Earth Systems Science, and Planetary Science while allowing for a broadening of the student's educational experience with courses from the other sciences or the arts. The program is flexible, allowing students to assemble a truly interdisciplinary degree.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Geology Major (B.Sc.) (66 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

The program curriculum provides a rigorous foundation in the fundamental earth science subjects and in advanced subjects relevant to exploration for energy resources, industrial and ore minerals, and to environmental geosciences. The program meets the academic requirements shared by the professional orders for geologists and environmental geoscientists in Canadian provinces.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Planetary Sciences Honours (B.Sc.) (78 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 78

Program Description

The program curriculum is designed to provide a rigorous foundation in physical sciences and the flexibility to create an individualized program in preparation for careers in industry, teaching, and research. It is intended to provide an excellent preparation for graduate work in the earth and planetary sciences.

Note: Honours students must maintain a CGPA equal to or greater than 3.20.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Complementary Courses (6 credits)

6 credits (3 credits from two of the three ESYS Departments: EPSC, ATOC, or GEOG), at the 300 level or higher, in consultation with the ESS student adviser.

Earth System Science Major (B.Sc.) (57 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 57

Program Description

The Major in Earth System Science (ESYS) is offered jointly by the following departments:

- Atmospheric and Oceanic Sciences (ATOCS)
- Earth and Planetary Sciences (EPSC)
- Geography (GEOG)

Earth System Science (ESYS) views Earth as a single integrated system that provides a unifying context to examine the interrelationships between all components of the Earth system. The approach concentrates on the nature of linkages among the biological, chemical, human, and physical subsystems of the Earth. Earth System Science primarily involves studying the cycling of matter and energy through the atmosphere, biosphere, cryosphere, exosphere, and hydrosphere. It examines the dynamics and interrelationships among these processes at time scales that range from billions of years to days, and seeks to understand how these interrelationships have changed over time.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

Earth System Science Honours (B.Sc.) (66 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

The Honours in Earth System Science (ESYS) is offered jointly by the following departments:

- Atmospheric and Oceanic Sciences (ATOC)
- Earth and Planetary Sciences (EPSC)
- Geography (GEOG)

A rigorous foundation in earth system science and the flexibility to create an individualized program in preparation for careers in industry, teaching, and research. It is also intended to provide an excellent preparation for graduate work in earth system science. A CGPA of 3.20 or higher is required for registration in and graduation from this program.

"First Class Honours" is awarded to students who obtain a minimum cumulative grade point average of 3.70, a minimum program GPA of 3.20, and a minimum grade of B+ in ESYS 300 Earth Data Analysis., ESYS 301 Earth System Modelling., and ESYS 500 Collaborative Research Project..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Entrepreneurship for Science Students Minor (B.Sc.) (18 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 18

Program Description

The Bachelor of Science; Minor in Entrepreneurship is a collaboration of the Faculty of Science and the Desautels Faculty of Management. The program focuses on an entrepreneurial mindset to see opportunity in the world and provides training in an entrepreneurial method to bring opportunities for change to life. This program takes a democratized approach to entrepreneurship, with exposure to the diverse manifestations of entrepreneurship in the world including but not limited to new ventures, social enterprise, tech start-ups, cooperatives, corporate venturing, side hustles, and passion projects. The program emphasizes self-directed learning and experiential education. The program includes group projects with live start-ups in the McGill entrepreneurial ecosystem, and exploration of pathways to launch an entrepreneurial initiative.

Field Studies Minor (B.Sc.) (18 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 18

Program Description

Students participating in any one of the field study semesters, i.e., the Africa Field Study Semester, the Barbados Field Study Semester, the Barbados Interdisciplinary Tropical Studies (BITS) Field Study Semester, McGill Arctic Field Study Semester, or the Panama Field Study Semester may complete the 18-credit Minor in Field Studies.

The Minor consists of the 15 credits of a field study semester plus three additional complementary credits chosen by the student in consultation with their departmental adviser and/or the Field Study Minor adviser.

For students in the B.Sc. Liberal Program, the Field Studies Minor can serve as the breadth component.

Program descriptions for each of the field study semesters are provided below.

Note: The field study semesters are not degree programs. Credits may be counted toward McGill degrees with the permission of program advisers. Students who complete a field study semester may consult

the Field Study Minor adviser about completing the Minor program as part of their McGill degree.

Africa Field Study Semester (15 credits)

The Africa Field Study Semester (AFSS) is run through McGill's Canadian Field Study in Africa Program (CFSIA).

The AFSS provides one term of integrated field study in East Africa, with emphasis on environmental conservation, culture change, and sustainable development. Students investigate challenges of sustaining biological diversity and social justice in African environments subject to cultural change, economic development, and environmental stress. Cultural and ecological variation is examined in highland, montane, rangeland, desert, riverine, salt- and fresh-water lake, coastal, and urban settings.

Africa Field Study Semester - Required Courses

6 credits

Students select one course titled "Research in Society and Development in Africa" and one course titled "Research in Ecology and Development in Africa" from the courses below.

Expand allContract all

Course	Title	Credits
ANTH 451	Research in Society and Development in Africa.	3
BIOL 451	Research in Ecology and Development in Africa.	3

GEOG 408	Geography of Development.	3
GEOG 423	Dilemmas of Development.	3
HIST 498	Independent Research.	3
REDM 405	Natural History of East Africa. ¹	3
WILD 420	Ornithology.	3

¹ Courses are offered on a rotational basis, at least 3 credits annually.

Barbados Field Study Semester (15 credits)

The Barbados Field Study Semester (BFSS), offered in partnership with the University of the West Indies, offers a unique opportunity to study at McGill University's campus in the tropics, the Bellairs Research Institute in Barbados. The focus of this field study semester is the

study of sustainability science, with emphasis on the Caribbean, which includes: a different climate and culture, field research, and conducting an applied research project. Project work is conducted with local partners and focuses on sustainability in Barbados.

GEOG 340	Sustainability in the Caribbean.	3

Barbados Interdisciplinary Tropical Studies Field Semester (15 credits)

The Barbados Interdisciplinary Tropical Studies (BITS) Field Semester is an activity-filled, hands-on experience for students with an interest in international studies with a Caribbean flavour. The focus is on sustainable agri-food, nutrition, and energy production on a tropical island with a tourist-based economy. It is offered annually (in the Summer). It consists of two 2-hour orientation sessions conducted on the Macdonald campus and at the Bellairs Research Institute in Barbados, followed by three 3-credit and one 6-credit project courses at Bellairs Research Institute. This program integrates intensive course work with group project work and contributes to the formation of professionals with planning, managing, decision-making, and communication skills. The program addresses a global need for experienced professionals capable of interacting with various levels of government, non-governmental organizations, and the private sector. BITS welcomes applications from senior undergraduate students from across the University.

Panama Field Study Semester (15 credits)

This program is offered in Panama in partnership with the Smithsonian Tropical Research Institute (STRI).

Hands-on experience is gained through research projects organized around multidisciplinary environmental issues. The nature of these projects will centre on practical environmental problems/questions

important for Panama. Students will form teams that will work with Panamanian institutions (NGO, governmental, or research).

There is a one- or two-day period of transition and 13 weeks of course attendance in Panama. Field trips will be integrated into each of the courses offered.

Minor Field Studies - Complementary Course

In consultation with their departmental adviser and/or the Field Study Minor adviser, students who have completed one of the field study semesters described above may select a 3-credit complementary course to complete the requirements for the Minor and ask for it to be added to their academic records.

General Science Minor (B.Sc.) (18 credits)

Offered by: Science (Faculty of Arts)

Degree: Bachelor of Science

Program credit weight: 18

Program Description

The Minor General Science is restricted to students in the B.Sc. Liberal program and may be used for the breadth component in this option. Students should consult their program adviser for their core science component and the Interdisciplinary Programs Adviser when selecting courses for this Minor.

Complementary Courses (18 credits)

Courses are to be chosen according to the following guidelines:

All courses must be offered by the Faculty of Science and must be at or above the 200 level .

All courses must be different from the student's core science component courses.

Two options:

9 credits at the 300 level or above and at least 9 credits outside the student's core science component subject.

or

12 credits at the 300 level or above and at least 6 credits outside the student's core science component subject.

¹ Note: All Undergraduate research project courses with the 396 or 397 course number cannot be used toward the Minor General Science.

Geography Minor (B.Sc.) (18 credits)

Offered by: Geography (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 18

Program Description

The Minor Geography is expandable into the B.Sc. Major Geography.

The Minor Geography is designed to provide students in the Faculty of Science with an overview of basic elements of geography at the introductory and advanced level.

This Minor permits no overlap with any other programs.

Required Courses (6 credits)

Geography Liberal Program - Core Science Component (B.Sc.) (49 credits)

Offered by: Geography (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 49

Program Description

This is the Core Science Component in Geography for the B.Sc. Liberal. Required courses provide a foundation in Geography (which takes a holistic approach to environmental sciences, distinguished by its incorporation of human and climatic elements). By completing these courses, students will be armed with the prerequisites for 300-level courses in Geography. Our set of complementary courses provides students with necessary analytical skills and a broad background in physical geography. The 300-level courses in the complementary set prepare students for advanced study at the 400 and 500 level.

Degree Requirements — B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

Geography Major (B.Sc.) (58 credits)

Offered by: Geography (Faculty of Science)**Degree:** Bachelor of Science**Program credit weight:** 58

Program Description

The BSc Major in Geography provides students with strong training in the theory and tools of physical geography. Students will explore the science of how physical, chemical, and biological processes interact at various spatial and temporal scales to produce distinct environments over the planet, and study different suites of ecosystem services while investigating sustainability challenges for human communities that depend on them. The program includes core training in systematic areas of physical geography (geomorphology, hydrology, soil biogeochemistry, biogeography and climatology), field courses providing hands on exposure to environmental data collection, and courses in quantitative techniques and in GIS and Remote Sensing.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Geography Honours (B.Sc.) (66 credits)

Offered by: Geography (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

The Honours program provides specialized systematic training in physical geography. In addition to the Faculty of Science 3.00 CGPA requirement, students in a Geography Honours program must maintain a program GPA of 3.30 and complete a 6-credit Honours thesis.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Immunology (Interdepartmental) Honours (B.Sc.) (75 credits)

Offered by: Microbiology & Immunology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 75

Program Description

The B.Sc.; Honours in Immunology (Interdepartmental) program involves the Departments of Biochemistry; Microbiology and Immunology; and Physiology, and incorporates elements from each of these disciplines. The program focuses on the critical understanding of the patho-physiology of many immune-mediated diseases.

The program consists of 48 required credits of basic science courses, covering cell and molecular biology; microbiology and immunology; biochemistry; and physiology. There are also 27 complementary credits which allow for specialization in immunology and related disciplines. To graduate from IHI, students must have a minimum CGPA of 3.30 and pass five immunology courses (MIMM 214 Introductory Immunology: Elements of Immunity., MIMM 314 Intermediate Immunology., PHGY 531 Topics in Applied Immunology., PHGY 419D1 Immunology Research Project. and PHGY 419D2 Immunology Research Project., PHGY 513 Translational Immunology., and one of BIOC 503 Biochemistry of Immune Diseases., MIMM 414 Advanced Immunology., MIMM 509 Inflammatory Processes., with a minimum grade of B.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Interdisciplinary Life Sciences Minor (B.Sc.) (24 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 24

Program Description

The Interdisciplinary Life Sciences Minor will allow students from the earth, physical, math, and computational science areas to broaden their studies with some basic life sciences, health social science, and empirical technological science. The Minor is 24 credits and allows students flexibility in their course selections. Students must take 9 credits from an extensive list of basic life science courses, 3 credits from an extensive list of health and social science courses, and 3 credits from an empirical and technological science list. The remaining 9 credits may be taken from courses listed in any of the three categories.

Please note: Students studying in Anatomy and Cell Biology; Biochemistry; Honours Immunology; Microbiology and Immunology; Neuroscience; Pharmacology; and Physiology are not permitted to complete this Minor.

Interested students should contact the Interdisciplinary Programs Adviser.

Complementary Courses (24 credits)

The 24 credits required for this program must satisfy the following criteria:

At least 18 credits must be outside the student's main discipline.

Depth requirement:

at least 6 credits must be at the 300 level or above.

Course	Title	Credits

Kinesiology Minor (B.Sc.) (24 credits)

Offered by: Kinesiology and Physical Ed (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 24

Program Description

The Minor Kinesiology is designed to provide students in B.Sc. programs with basic but comprehensive knowledge of scientific bases

of human physical activity and its relationship with health and well-being.

Students registered in the Minor Kinesiology may not take additional courses outside the Faculties of Arts and of Science.

This minor program requires an application due to limited enrolment space. Please see <http://www.mcgill.ca/isa/faculty-advising/minor-programs> for procedures and deadlines.

Management (For Non-Management Students) Minor (B.Sc.) (18 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Bachelor of Science

Program credit weight: 18

Program Description

The Minor Management consists of 18 credits of Management courses and is currently offered to non-Management students in the following

Faculties: Arts, Engineering, Science, Agricultural & Environmental Sciences, Music, Religious Studies, and Kinesiology.

This Minor is designed to provide non-management students with the opportunity to obtain basic knowledge in various aspects of management.

MGCR 222	Introduction to Organizational Behaviour.	3
MGCR 271	Business Statistics. ¹	3
MGCR 293	Managerial Economics. ²	3
MGCR 331	Information Technology Management . ³	3
MGCR 341	Introduction to Finance.	3
MGCR 352	Principles of Marketing. ³	3
MGCR 372	Operations Management.	3
MGCR 382	International Business.	3

¹ 3 credits of statistics: Students who have taken an equivalent Statistics course in another faculty may not count those credits towards the Minor; an additional 3-credit complementary course must be chosen from the course list above.
² Students who have taken an equivalent Economics course in another faculty may not count those credits toward the Minor; an additional 3-credit complementary course must be chosen from the course list above.
³ Prerequisite: MGCR 271 Business Statistics. or another equivalent Statistics course approved by the Program Adviser.

9 credits selected from any Management courses not already chosen from the first list or any 300- or 400-level Management courses for which prerequisites have been met.

Note: Students should select their Statistics course only after consulting the "Course Overlap" section in the Faculty of Arts, the "Course Overlap" section in the Faculty of Science, and the "Course Overlap" section in the Desautels Faculty of Management to avoid overlapping Statistics courses.

Mathematics Minor (B.Sc.) (24 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 24

Program Description

The Minor may be taken in conjunction with any primary program in the Faculty of Science (other than programs in Mathematics). Students should declare their intention to follow the Minor Mathematics at the beginning of the penultimate year and should obtain approval for the

selection of courses to fulfil the requirements for the Minor from the Departmental Chief Adviser (or delegate).

It is strongly recommended that students in the Minor program take MATH 323 Probability.. The remaining credits may be freely chosen from the required and complementary courses for majors and honours students in Mathematics, with the obvious exception of courses that involve duplication of material. Alternatively, up to 6 credits may be allowed for appropriate courses from other departments.

Generally, no more than 6 credits of overlap are permitted between the Minor and the primary program. However, with an approved choice of substantial courses, the overlap restriction may be relaxed to 9 credits for students whose primary program requires 60 credits or more, and to 12 credits when the primary program requires 72 credits or more.

Required Courses (9 credits)

Expand allContract all

Course	Title	Credits
MATH 222	Calculus 3.	3
MATH 223	Linear Algebra. ¹	3
MATH 315	Ordinary Differential Equations.	3

¹ MATH 223 Linear Algebra. may be replaced by MATH 235 Algebra 1. and MATH 236 Algebra 2.. In this case, the complementary credit requirement is reduced by 3 credits.

Complementary Courses (15 credits)

15 credits selected from the required and complementary courses for majors and honours students in Mathematics, with MATH 323 Probability. strongly recommended; alternatively, up to 6 credits may be allowed for appropriate courses from other departments.

Statistics Minor (B.Sc.) (27 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 27

Program Description

(24-27 credits)

Students may complete this program with a minimum of 24 credits or a maximum of 27 credits.

The Minor may be taken in conjunction with any primary program in the Faculty of Science (other than those with a main component in Statistics). Students should declare their intention to follow the Minor Statistics at the beginning of the penultimate year and must obtain approval for the selection of courses to fulfil the requirements for the Minor from the Departmental Chief Adviser (or delegate).

All courses counted towards the Minor must be passed with a grade of C or better. Generally, no more than 6 credits of overlap are permitted between the Minor and the primary program. However, with an approved choice of substantial courses, the overlap restriction may be relaxed to 9 credits for students whose primary program requires 60

credits or more, and to 12 credits when the primary program requires 72 credits or more.

No more than 6 credits from the above list of complementary courses may be taken outside the Department of Mathematics and Statistics.

Mathematics Liberal Program - Core Science Component (B.Sc.) (45 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science
Program credit weight: 45

Program Description

The B.Sc.; Liberal Program – Core Science Component in Mathematics provides a general overview of Mathematics, including a rigorous foundation and exploration of the different branches of Mathematics,

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering the Core Science Component in Mathematics are normally expected to have completed the courses below or their equivalents. Otherwise, they will be required to make up any deficiencies in these courses over and above the 45 credits required for the program.

Statistics Liberal Program - Core Science Component (B.Sc.) (48 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 48

Program Description

(45 or 48 credits)

This program provides training in statistics, with a solid mathematical core, and basic training in computing. With strong performance in an appropriate selection of courses, this program can lead to "A.Stat." professional accreditation from the Statistical Society of Canada, which is regarded as the entry level requirement for Statisticians practising in Canada.

Students may complete this program with a minimum of 45 credits or a maximum of 48 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Statistics Major (B.Sc.) (54 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 54

Program Description

The program provides training in statistics, with a solid mathematical core, and basic training in computing. With satisfactory performance in an appropriate selection of courses, this program can lead to the professional accreditation A. Stat from the Statistical Society of Canada, which is regarded as the entry level requirement for a Statistician practicing in Canada. The students may complete this program with 54-57 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering the Major in Statistics program are normally expected to have completed the courses below or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 54 credits of program courses.

Expand allContract all

Course	Title	Credits
MATH 133	Linear Algebra and Geometry.	3

Mathematics and Computer Science Major (B.Sc.) (72 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 72

Program Description

The B.Sc.; Major in Mathematics and Computer Science emphasizes fundamental skills in mathematics and computer science, while exploring the interaction between the two fields.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are

Complementary Courses (18 credits)

9 credits from the following.

Other MATH courses, at the undergraduate level, not included in this list may be chosen in consultation with an adviser.

Statistics and Computer Science Major (B.Sc.) (72 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 72

Program Description

This program provides students with a solid training in both computer science and statistics together with the necessary mathematical background. As statistical endeavours involve ever increasing amounts of data, some students may want training in both disciplines.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

[Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.](#)

Program Prerequisites

Students entering the Joint Major in Statistics and Computer Science are normally expected to have completed the courses below or their equivalents. Otherwise they will be required to make up any deficiencies in these courses over and above the 72 credits of required courses.

¹ MATH 578 Numerical Analysis 1. and COMP 540 Matrix Computations. cannot both be taken for program credit.

The remaining Computer Science credits are selected from COMP courses at the 300 level or above (except COMP 396 Undergraduate Research Project.) and ECSE 508 Multi-Agent Systems..

Applied Mathematics Honours (B.Sc.) (63 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 63

Program Description

The B.Sc.; Honours in Applied Mathematics provides an in-depth training, at the honours level, in “discrete” or “continuous” applied mathematics. It gives the foundations and necessary tools to explore some areas such as numerical analysis, continuous and discrete optimization, graph theory, discrete probability. The program also provides the background required to pursue interdisciplinary research at the interface between mathematics and other fields such as biology, physiology, and the biomedical sciences. This program may be completed with a minimum of 60 credits or a maximum of 63 credits.

Students may complete this program with a minimum of 60 credits or a maximum of 63 credits depending if they are exempt from MATH 222 Calculus 3..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

The minimum requirement for entry into the Honours program is that the student has completed with high standing the following courses below or their equivalents:

Expand allContract all

Course	Title	Credits
MATH 133	Linear Algebra and Geometry.	3
MATH 150	Calculus A.	4
MATH 151	Calculus B.	4

In particular, MATH 150 Calculus A./MATH 151 Calculus B. and MATH 140 Calculus 1./MATH 222 Calculus 3. are considered equivalent.

Students who have not completed an equivalent of MATH 222 Calculus 3. on entering the program must consult an academic adviser and take MATH 222 Calculus 3. as a required course in the first semester, increasing the total number of program credits from 60 to 63. Students who have successfully completed MATH 150 Calculus A./MATH 151 Calculus B. are not required to take MATH 222 Calculus 3..

Note: COMP 202 Foundations of Programming.—or an equivalent introduction to computer programming course—is a program prerequisite. UO students may take COMP 202 Foundations of Programming. as a Freshman Science course; new U1 students should take it as an elective in their first semester.

Students who transfer to Honours in Applied Mathematics from other programs will have credits for previous courses assigned, as appropriate, by the Department.

To be awarded the Honours degree, the student must have, at time of graduation, a CGPA of at least 3.00 in the required and complementary Mathematics courses of the program, as well as an overall CGPA of at least 3.00.

Required Courses (36-39 credits)

Statistics Honours (B.Sc.) (63 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts

Program credit weight: 63

Program Description

The B.Sc.: Honours in Statistics provides training, at the honours level, in statistics, with a solid mathematical core, and basic training in computing. With a suitable selection of complementary courses, the program can focus on probability, mathematical statistics, applied statistics, actuarial science and finance, or data science. With satisfactory performance in an appropriate selection of courses, this program can lead to the professional accreditation A.Stat from the

Statistical Society of Canada, which is regarded as the entry level requirement for a Statistician practicing in Canada.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Students may complete this program with a minimum of 60 credits or a maximum of 63 credits depending on whether or not they are required to take MATH 222 Calculus 3..

Program Prerequisites

The minimum requirement for entry into the Honours program is that the student has completed with high standing the following courses or their equivalents:

Expand allContract all

Course	Title	Credits
MATH 133	Linear Algebra and Geometry.	3
MATH 150	Calculus A.	4
MATH 151	Calculus B.	4

In particular, MATH 150 Calculus A./MATH 151 Calculus B. and MATH 140 Calculus 1./MATH 141 Calculus 2./MATH 222 Calculus 3. are considered equivalent.

Required Courses (25-28 credits)

Students who have not completed an equivalent of MATH 222 Calculus 3. on entering the program must consult an academic adviser and take MATH 222 Calculus 3. as a required course in the first semester, increasing the total number of program credits from 60 to 63. Students who have successfully completed MATH 150 Calculus A./MATH 151 Calculus B. are not required to take MATH 222 Calculus 3..

Note: Students with limited knowledge of computer programming should take COMP 202 Foundations of Programming./COMP 204 Computer Programming for Life Sciences./COMP 208 Computer Programming for Physical Sciences and Engineering . or equivalent before COMP 250 Introduction to Computer Science.. UO students may take COMP 202 Foundations of Programming. as a Freshman Science course; new U1 students should take one of these courses as an elective in their first semester.

Note: Students who wish to take MATH 204 Principles of Statistics 2. as a complementary course are strongly advised to take MATH 203 Principles of Statistics 1. beforehand, in their first semester or their first year.

Students who transfer to Honours in Mathematics from other programs will have credits for previous courses assigned, as appropriate, by the Department.

To be awarded the Honours degree, the student must have, at time of graduation, a CGPA of at least 3.00 in the required and complementary Mathematics courses of the program, as well as an overall CGPA of at least 3.00.

Statistics and Computer Science Honours (B.Sc.) (79 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 79

Program Description

The program provides a rigorous training in the area of Computer Science and Statistics at the honours level. Exploration of the interactions between the two fields.

Students may complete this program with a minimum of 76 credits or a maximum of 79 credits depending on whether or not they are exempt from taking COMP 202 Foundations of Programming..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering the Joint Honours in Statistics and Computer Science are normally expected to have completed the courses below or their equivalents. Otherwise, they will be required to make up any deficiencies in these courses over and above the 76-79 credits of courses in the program.

Expand allContract all

Course	Title	Credits

Mathematics and Computer Science Honours (B.Sc.) (78 credits)

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 78

Program Description

The B.Sc.; Honours in Mathematics and Computer Science provides a rigorous training, at the honours level, in mathematics and computer science, while exploring the interaction between the two fields. This program may be completed with a minimum of 72 credits or a maximum of 78 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students must consult an Honours adviser in both departments to ensure that they have sufficient background to enter the program. The minimum requirements are the following courses or their equivalencies:

Expand allContract all

Course	Title	Credits
MATH 133	Linear Algebra and Geometry.	3
MATH 150	Calculus A.	4
MATH 151	Calculus B.	4

In particular, MATH 150 Calculus A./MATH 151 Calculus B. and MATH 140 Calculus 1./MATH 141 Calculus 2./MATH 222 Calculus 3. are considered equivalent.

To be awarded the Honours degree, the student must have, at time of graduation, a CGPA of at least 3.00 in the required and complementary Mathematics courses of the program, as well as an overall CGPA of at least 3.00.

Required Courses (33-36 credits)

Microbiology and Immunology Honours (B.Sc.) (72 credits)

Offered by: Microbiology & Immunology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 72

Program Description

The Honours program is designed to offer, in addition to the substantial background given by the Major program, a significant research experience in a laboratory within the Department during the U3 year. Students are prepared for this independent research project by following an advanced laboratory course in U2. This program is intended to prepare students for graduate study in microbiology and immunology or related fields, but could also be chosen by students intending to enter medical research after medical school, or intending to enter the job market in a laboratory research environment.

Students intending to apply to Honours must follow the Major program in U1 and U2 and must obtain a CGPA of at least 3.50 at the end of their U2 year. For graduation in Honours, students must pass all required courses with a C or better, and achieve a sessional GPA of at least 3.30 in the U3 year.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Neuroscience Minor (B.Sc.) (25 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 25

Program Description

"Please note: this Minor is only available to students studying in the faculty of Science."

This Minor is intended to provide students with a basic understanding of how the nervous system functions. The Minor is composed of 24-25 credits: 9 required and 15-16 complementary. For the 15-16 complementary credits, at least 12-13 must be from outside the student's home department and at least 6 of the 12-13 must be at the 400 or 500 level.

Note 1: A maximum of 6-7 credits can be counted for both the student's primary program and for the Minor in Neuroscience.

Required Courses (9 credits)

Expand allContract all

Course	Title	Credits
BIOL 200	Molecular Biology.	3
NSCI 200	Introduction to Neuroscience 1.	3
NSCI 201	Introduction to Neuroscience 2.	3

Complementary Courses (16 credits)

15-16 credits selected as follows:

- At least 12-13 credits must be from outside the student's home department.
- At least 6 of the 12-13 credits have to be at the 400 or 500 level.

- ¹ Students may select ANAT 212 Molecular Mechanisms of Cell Function. or BIOC 212 Molecular Mechanisms of Cell Function. or
² BIOL 201 Cell Biology and Metabolism..
 Students may select either BIOL 306 Neural Basis of Behaviour. or PHGY 314 Integrative Neuroscience..

6-15 credits from the following list of 400- and 500-level courses:

Course	Title	Credits
BIOL 530	Advances in Neuroethology.	3
BIOL 532	Developmental Neurobiology Seminar.	3
BIOL 580	Genetic Approaches to Neural Systems.	3
BIOL 588	Advances in Molecular/Cellular Neurobiology.	3
NEUR 502	Basic and Clinical Aspects of Neuroimmunology.	3
PHGY 425	Analyzing Physiological Systems.	3
PHGY 451	Advanced Neurophysiology.	3
PHGY 524	Chronobiology.	3
PHGY 556	Topics in Systems Neuroscience.	3
PSYC 410	Special Topics in Neuropsychology.	3
PSYC 415	Electroencephalography (EEG) Laboratory in Psychology.	3
PSYC 427	Sensorimotor Neuroscience.	3

PSYC 433	Cognitive Science.	3
PSYC 444	Sleep Mechanisms and Behaviour.	3
PSYC 470	Memory and Brain.	3
PSYC 506	Cognitive Neuroscience of Attention.	3
PSYC 514	Neurobiology of Memory.	3
PSYC 522	Neurochemistry and Behaviour.	3
PSYC 526	Advances in Visual Perception.	3
PSYT 500	Advances: Neurobiology of Mental Disorders.	3

Program Prerequisites

Students may complete this program with a minimum of 65 or a maximum of 67 credits.

Notes on admission to the Neuroscience Major program: Enrolment in the Neuroscience Major is limited to a total of 50 students per year. UO students seeking admission to this program should consult the neuroscience website for admissions requirements and should have completed the courses listed below or equivalent.

Neuroscience Major (B.Sc.) (65 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 65

Program Description

The Neuroscience Major is a focused program for students interested in how the nervous system functions. It is highly interdisciplinary and borrows principles and methodologies from a number of fields including: biology, biochemistry, physiology, psychology, mathematics, physics, computer science, and immunology. To ensure that they have the appropriate foundation, students are required to take 29 credits in lower-level courses from physiology, biology, mathematics, computer science, psychology, and ethics. The program offers students a concentrated selection of 15 credits to be taken from one of three areas of current scientific activities in the neurosciences:

- Cell/Molecular,
- Neurophysiology/Computation, or
- Cognition/Behaviour.

In addition, students select 21 credits from a wide array of complementary courses to obtain more specialized training in areas of neuroscience that best suit their interests.

Enrolment in the Neuroscience Major is limited to a total of 50 students per year. UO students seeking admission to this program should consult the neuroscience website for admissions requirements and should have completed the courses listed below or their equivalents.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Core Required Courses (20 credits)

Note: Students who have successfully completed an equivalent of CHEM 212 Introductory Organic Chemistry 1. in CEGEP or elsewhere must replace these credits with a 3-credit elective course to satisfy the total credit requirement for the Neuroscience Major.

Neuroscience Honours (B.Sc.) (74 credits)

Offered by: Science (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 74

Program Description

The Honours program is intended for students who are interested in laboratory-based research and in acquiring a foundation in each of the 3 streams of the Neuroscience Major Program (cell and molecular; neurophysiology and computational; and cognition and behaviour). Students are admitted to the program after one year in a major.

Applicants must have taken a minimum of 27 graded credits in their U1 year, must have a CGPA of at least 3.5, and must have obtained minimum grades of B+ in both NSCI 200 Introduction to Neuroscience 1. and NSCI 201 Introduction to Neuroscience 2., as well as a minimum grade of C in BIOL 200 Molecular Biology., BIOC 212 Molecular Mechanisms of Cell Function. or BIOL 201 Cell Biology and Metabolism., and CHEM 212 Introductory Organic Chemistry 1.. Additional requirements for applying are provided on the Neuroscience website: (www.mcgill.ca/neuroscience). Meeting the minimum requirements does not guarantee admission to the Honours Neuroscience program.

To graduate from the program, students must have a CGPA of 3.30 and a minimum grade of B+ in NSCI 300 Neuroethics., NSCI 400D1 Neuroscience Seminar./ NSCI 400D2 and NSCI 430D1 Honours Research Project./NSCI 430D2 Honours Research Project..

"First Class Honours" is awarded to students who obtain a minimum cumulative grade point average of 3.70, a minimum program GPA of 3.30, and a minimum grade of B+ in NSCI 300 Neuroethics., NSCI 400D1 Neuroscience Seminar./ NSCI 400D2 and NSCI 430D1 Honours Research Project./NSCI 430D2 Honours Research Project..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Pharmacology Minor (B.Sc.) (24 credits)

Offered by: Pharmacology and Therapeutics (Faculty of Science)**Degree:** Bachelor of Science**Program credit weight:** 24

Program Description

The Minor Pharmacology is intended for students registered in a complementary B.Sc. program who are interested in a focused

introduction to specialized topics in pharmacology to prepare them for professional schools, graduate education, or entry into jobs in industry or research institutes.

Students should declare their intent to enter the Minor in Pharmacology at the beginning of their U2 year. They must consult with, and obtain the approval of, the Coordinator for the Minor Program in the Department of Pharmacology and Therapeutics. Please contact the Student Affairs Coordinator: Chantal Grignon (undergradstudies.pharmacology@mcgill.ca; 514-398-3622).

All courses in the Minor program must be passed with a minimum grade C or better. Generally, no more than 6 credits of overlap are permitted between the Minor and the primary program.

Required Courses (6 credits)

Pharmacology Major (B.Sc.) (67 credits)

Offered by: Pharmacology and Therapeutics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 67

Program Description

This program incorporates extensive studies in Pharmacology with a strong component of related biomedical sciences, providing a solid preparation for employment opportunities or for entry into graduate or professional training programs. Students must consult the Student Affairs Coordinator upon entering the program and every year thereafter to verify courses and progress.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

¹ Open to students who have the prerequisites.

Students may take either ANAT 458 Membranes and Cellular Signaling, or BIOC 458 Membranes and Cellular Signaling..

² Access to these courses is not guaranteed.

Access to these courses is not guaranteed. Open to students who have the prerequisites.

Students may take either PHAR 503 Drug Discovery and

⁶ Development 1. or PHAR 505 Structural Pharmacology..

If chosen, PHAR 522D1 Fundamentals of Disease Therapy, and

⁷ PHAR 522D2 Fundamentals of Disease Therapy, are taken together.

If chosen, PHAR 599D1 Pharmacology Research Project, and PHAR 599D2 Pharmacology Research Project, are taken together.

Pharmacology Honours (B.Sc.) (76 credits)

Offered by: Pharmacology and Therapeutics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 76

Program Description

The Honours program is designed as a preparation for graduate studies and research. In addition to the strong training provided by the Major program, it requires students to have direct research experience in a chosen area during their final year of study. Acceptance into the Honours program takes place in the Winter term of U2 and requires a CGPA of 3.50. Students who wish to enter the Honours program should follow the Major program; those who satisfactorily complete the first three terms with a CGPA of at least 3.50 and a mark of B+ or higher in core Pharmacology courses (PHAR 300 Drug Action., PHAR 301 Drugs and Disease., and PHAR 303 Principles of Toxicology.) are eligible for admission. Applications can be obtained from the office of the Department of Pharmacology in the McIntyre Medical Building or on the Departmental website.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physics Minor (B.Sc.) (18 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science; Bachelor of Arts and Science

Program credit weight: 18

Program Description

The 18-credit Minor permits no overlap with any other programs. It contains no Mathematics courses, although many of the courses in it have Math pre- or corequisites. It will, therefore, be particularly appropriate to students in Mathematics, but it is also available to any Science student with the appropriate mathematical background.

Students in certain programs (e.g., the Major Chemistry) will find that there are courses in the Minor that are already part of their program, or that they may not take for credit because of a substantial overlap of material with a course or courses in their program. After consultation with an adviser, such students may complete the Minor by substituting any other physics course(s) from the Major or Honours Physics programs.

Electrical Engineering Minor (B.Sc.) (24 credits)

Offered by: Electrical & Computer Engr (Faculty of Science)**Degree:** Bachelor of Science**Program credit weight:** 24

Program Description

This Minor program is currently under review. Students are encouraged to contact Department of Electrical & Computer Engineering for detailed information.

[Program registration done by Student Affairs Office]

The Minor program does not carry professional recognition. Only students who satisfy the requirements of the Major Physics are eligible for this Minor. Students registered for this option cannot count PHYS 241 Signal Processing toward the requirements of the Major in Physics, and should replace this course by another Physics or Mathematics course. Students who select ECSE 334 Introduction to Microelectronics in the Minor cannot count PHYS 328 Electronics toward the requirements of the Major in Physics, and should replace this course by another Physics or Mathematics course.

Physics Liberal Program - Core Science Component (B.Sc.) (45 credits)

Offered by: Physics (Faculty of Science)**Degree:** Bachelor of Science**Program credit weight:** 45

Program Description

The B.Sc.; Liberal Program - Core Science Component in Physics offers an overview of key physics topics, focusing on fundamentals. Topics include dynamics, electricity and magnetism, quantum mechanics, experimental methods and more. This program allows students also pursue a minor or major concentration in another discipline.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering Physics programs from the Freshman program must have successfully completed the courses below or their equivalents. Quebec students must have completed the DEC with appropriate science and mathematics courses.

The written permission of an adviser is required for this change of program. The missing MATH 249 Honours Complex Variables. and PHYS 260 Modern Physics and Relativity. from the U1 Honours year should be taken in U2.

Physics: Biological Physics Major (B.Sc.) (82 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 82

Program Description

This program may be completed in 81 or 82 credits.

The B.Sc.; Major in Physics; Biological Physics program keeps a strong core of foundational physics and specializes in biology, mathematics, physiology, computer science, and chemistry. Complementary courses provide background in molecular and cell biology, computer science, and organic chemistry, whereas introductory and advanced biophysics courses offered by the Physics Department as integrative courses

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Physics and Geophysics Major (B.Sc.) (69 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 69

Program Description

The joint program in Physics and Geophysics focuses on geophysics and related fields.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).

- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering Physics programs from the Freshman program must have successfully completed the courses below or their equivalents. Quebec students must have completed the DEC with appropriate science and mathematics courses.

Physics and Computer Science Major (B.Sc.) (66 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

The Major Physics and Computer Science is designed to give motivated students the opportunity to combine the two fields in a way that will distinguish them from the graduates of either field by itself. The two disciplines complement each other, with physics providing an analytic problem-solving outlook and basic understanding of nature, while computer science enhances the ability to make practical and marketable applications, in addition to having its own theoretical interest. Graduates of this program may be able to present themselves as being more immediately useful than a pure physics major, but with more breadth than just a programmer. They will be able to demonstrate their combined expertise in the Special Project course which is the centrepiece of the final year of the program.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Physics Honours (B.Sc.) (81 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 81

Program Description

The B.Sc.; Honours in Physics provides a broad view of physics from classical to modern topics as well as a choice of specialized high level courses relevant for contemporary research. The students have the opportunity to participate in research.

This is a demanding program. This program may be completed in 78 or 81 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physics: Biological Physics Honours (B.Sc.) (82 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 82

Program Description

The B.Sc.; Honours in Physics; Biological Physics program contains a strong core of foundational physics and specializes in biology, mathematics, physiology, computer science, and chemistry. This Honours program offers a more rigorous preparation, with additional research experience, in biophysics. The program includes a research project within a biophysics lab in the department that is completed in the final year. This program may be completed in 81 or 82 credits

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physics and Chemistry Honours (B.Sc.) (80 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 80

Program Description

This program provides a strong basis in both chemistry and physics. It contains a core of chemistry courses and a mix of honours-level courses in physics and mathematics.

To graduate with an Honours degree, a student must have, at time of graduation, a CGPA of at least 3.0 in the required and complementary courses of the program, as well as an overall CGPA of at least 3.0.

This is a specialized and demanding program. The student will have two advisers, one from Chemistry and the other from Physics. This program may be completed in 80 or 83 credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering Physics programs from the Freshman program must have successfully completed the courses below or their equivalents. Quebec students must have completed the DEC with appropriate science and mathematics courses.

Physics and Computer Science Honours (B.Sc.) (81 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 81

Program Description

This program provides essential background in physics and computer science at a level sufficient to pursue courses at the 400- and 500-level in either discipline. The program is intended to be flexible to allow students to take either more physics or more computer science courses at the advanced level.

Students entering this Honours program should have high standing in mathematics, physics, and computer science.

To graduate with an Honours degree, a student must have, at time of graduation, a CGPA of at least 3.0 in the required and complementary courses of the program, as well as an overall CGPA of at least 3.0.

The program may completed in 78 or 81 credits.

Note: COMP 202 Foundations of Programming.—or an equivalent introduction to computer programming course— is a program prerequisite. UO students may take COMP 202 Foundations of Programming. as a Freshman Science course; new U1 students should take it as an elective in their first semester.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Mathematics and Physics Honours (B.Sc.) (81 credits)

Offered by: Physics (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 81

Program Description

This is a specialized and demanding program intended for students who wish to develop a strong basis in both Mathematics and Physics in

preparation for graduate work and a professional or academic career. Although the program is optimized for theoretical physics, it is broad enough and strong enough to prepare students for further study in either experimental physics or mathematics.

The minimum requirement for entry into the program is completion with high standing of the usual CEGEP courses in physics and in mathematics, or the Physics Program Prerequisites as explained below. In addition, a student who has not completed the equivalent of MATH 222 Calculus 3. must take it in the first term without receiving credit toward the 81 credits required in the Honours program.

A student whose average in the required and complementary courses in any year falls below a GPA of 3.00, or whose grade in any individual required or complementary course falls below a C (unless the student improves the grade to a C or higher through a supplemental exam or by retaking the course), may not register in the Honours program the following year, or graduate with the Honours degree, except with the permission of both departments. The student will have two advisers, one from Mathematics and the other from Physics.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites

Students entering Physics programs from the Freshman program must have successfully completed the courses below or their equivalents. Quebec students must have completed the DEC with appropriate science and mathematics courses.

Physiology Major (B.Sc.) (66 credits)

Offered by: Physiology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 66

Program Description

(65-66 credits)

The Major program includes, in addition to some intensive studies in Physiology, a strong core content of related biomedical sciences. Admission to the Major program will be in U2, upon completion of the U1 required courses, and in consultation with the student's adviser.

If not previously taken, CHEM 212 Introductory Organic Chemistry 1. must be completed in addition to the 64-65 program credits.

Students may complete this program with a minimum of 64 credits or a maximum of 65 credits depending on their choice of complementary courses.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physiology and Mathematics Major (B.Sc.) (79 credits)

Offered by: Physiology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 79

Program Description

The physiology and mathematics major program is an interdisciplinary program that integrates the world of physiology with mathematics. It explores the relationship between Physiological systems and the quantitative principles underpinning them. Physiology covers topics from cellular function to organ systems and behaviour. Mathematics delves into the basis of pure and applied mathematics with a focus on developing analytical, computational and problem-solving skills with an emphasis on nonlinear dynamics.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physiology and Physics Major (B.Sc.) (82 credits)

Offered by: Physiology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 82

Program Description

This program provides a firm foundation in physics, mathematics, and physiology. It is appropriate for students interested in applying methods of the physical sciences to problems in physiology and allied biological sciences.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are

met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Physiology Honours (B.Sc.) (75 credits)

Offered by: Physiology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 75

Program Description

All admissions to the Honours program will be in U2, and the student must have a U1 GPA of 3.30, with no less than a B in PHGY 209 Mammalian Physiology 1. and PHGY 210 Mammalian Physiology 2.. Admission to U3 requires a U2 CGPA of 3.20 with no less than a B in U2 Physiology courses. Decisions for admission to U3 will be heavily influenced by student standing in U2 courses.

The Department reserves the right to restrict the number of entering students in the Honours program. Students who do not maintain Honours standing may transfer their registration to the Major program in Physiology.

The deadline to apply to the Honours program is August 23, 2019. Application forms are available online at physiology.med@mcgill.ca or a hard copy can be picked up at McIntyre 1021. Please contact Sonia Viselli, Student Affairs Officer (sonia.viselli@mcgill.ca; 514-398-3689) for more information. An email will be sent to acknowledge receipt of your application.

Graduation: To graduate from the Honours Physiology program, the student will have a CGPA of 3.20 with a mark no less than a B in all Physiology courses.

If not previously taken, CHEM 212 Introductory Organic Chemistry 1. must be completed in addition to the 75 program credits.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Psychology Minor (B.Sc.) (24 credits)

Offered by: Psychology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 24

Program Description

A minor program in Psychology is available to students registered in any B.Sc. program other than Psychology. This program is intended to complement a student's primary field of study by providing a focused introduction to specialized topics in psychology.

A separate minor concentration exists for students registered in a program in the Faculty of Arts.

The Minor program for Science students requires the completion of 24 credits in Psychology, of which no more than 6 may overlap with the primary program. All courses in the Minor program must be passed with a minimum grade of C. A prerequisite to the program is PSYC 204 Introduction to Psychological Statistics. or equivalent.

Program Prerequisite (0-3)

Students planning to enter the Minor Psychology program are required to complete PSYC 204 Introduction to Psychological Statistics. or equivalent.

¹ CEGEP students may not take PSYC 204 Introduction to Psychological Statistics. if they have completed Probability & Statistics or Statistics with a minimum grade of 75%.

Complementary Courses (24 credits)

3 or 6 credits selected from the following:

18 or 21 credits selected from Psychology courses at the 300 level or above.

Psychology Liberal Program - Core Science Component (B.Sc.) (45 credits)

Offered by: Psychology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 45

Program Description

Psychology is the scientific study of the mind and behavior. The B.Sc. Liberal Core Science Component in Psychology (45 credits) provides students with a broad overview of the field of psychological science. It is less specialized than the B.Sc. Major in Psychology as students choose a selection of the core courses in psychology as well as advanced courses in specialized content areas. Students may also have the option to complete a research course(s). This program provides

students with the space to take the additional courses they may need for applying to graduate school in psychology and for completing the undergraduate credits in psychology as specified by the Ordre des Psychologues du Québec (which are required by some graduate psychology programs). However, students desiring a more specialized program should consider the B.Sc. Major in Psychology.

Program Requirements

The Liberal Program - Core Science Component Psychology requires the completion of 45 credits in Psychology, all of which need to be passed with a minimum grade of C. Students completing a Liberal Program with a Core Science Component Psychology must also complete at least one breadth component in a second area.

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites (0-6 credits)

Students planning to enter the Core Science Component Psychology program should have completed an introductory course in general psychology and biology in CEGEP. Otherwise, they can complete them in their first year of study at McGill University (see below).

Introduction to Psychology or General Psychology in CEGEP is equivalent to PSYC 100 Introduction to Psychology. at McGill. Students who have not completed either of those courses are advised to take PSYC 100 Introduction to Psychology. in their first year.

Students who have completed General Biology 1 or 2 in CEGEP would have the recommended biology background. Students who have not completed one of those courses are advised to complete BIOL 111 Principles: Organismal Biology. or BIOL 112 Cell and Molecular Biology. during their first year.

McGill Freshman students are recommended to complete the following courses in their UO year:

Program Description

Psychology is the scientific study of the mind and behavior. The B.Sc. Major in Psychology (54 credits) provides students with an in-depth overview, covering the core areas of psychological science as well as more advanced courses in specialized content areas. Students also have the option to complete a research course(s) and/or gain additional training in science related disciplines (see Program Requirements for details). This program provides students with the space to take the additional courses they may need for applying to graduate school in psychology and for completing the undergraduate credits in psychology as specified by the Ordre des Psychologues du Québec (which are required by some graduate psychology programs).

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites (0-9 credits)

Students planning to enter the Major Psychology program should have completed an introductory course in general psychology, biology and statistics at the collegial level. Otherwise, they can complete them in their first year of study at McGill University (see below).

Introduction to Psychology or General Psychology in CEGEP is equivalent to PSYC 100 Introduction to Psychology. at McGill. Students who have not completed either of those courses are advised to take PSYC 100 Introduction to Psychology. in their first year.

Students who have completed General Biology 1 or 2 in CEGEP would have the recommended biology background. Students who have not completed one of those courses are advised to complete BIOL 111 Principles: Organismal Biology. or BIOL 112 Cell and Molecular Biology. during their first year.

CEGEP students may not take PSYC 204 Introduction to Psychological Statistics. if they have completed Probability & Statistics or Statistics with a minimum grade of 75%.

Psychology Honours (B.Sc.) (60 credits)

Offered by: Psychology (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 60

Program Description

Psychology is the scientific study of the mind and behavior. The B.Sc. Honours in Psychology (60 credits) is a specialized program that provides students with an in-depth overview of psychological science, covering the core areas as well as more advanced courses. Students are required to take a 2-term research course and seminar; students also have the option to complete additional research course(s) and/or gain additional training in science related disciplines (see Program Requirements for details). This program emphasizes practice in the research techniques and statistics used in graduate school and professionally later on. It also provides students with the space to take the additional courses they may need for applying to graduate school in psychology and for completing the undergraduate credits in psychology as specified by the Ordre des Psychologues du Québec (which are required by some graduate psychology programs). Students must apply to the Honours program; admission is selective.

Program Requirements

Typically, students apply to the Honours program at the end of U1; students may apply at the end of U2, although there are often fewer seats for students applying in U2 (also the Honours program requirements must be completed within the remaining terms). To be eligible to apply to the B.Sc. Honours in Psychology, students must have completed a minimum of 27 graded credits in the academic year prior to applying (fall and winter terms only). All applicants must have taken PSYC 204 Introduction to Psychological Statistics., PSYC 211 Introductory Behavioural Neuroscience., PSYC 212 Perception., PSYC 213 Cognition., PSYC 215 Social Psychology. and PSYC 305 Statistics for Experimental Design.. Exceptional performance in these courses is a primary criterion for acceptance into the Honours program. In addition to performance in these psychology courses, a minimum cumulative grade point average (CGPA) of 3.50 is required to apply.

However, since enrolment is limited, the typical CGPA cut-off is ~3.75, although this varies from year to year depending on the applicant pool. Once in the Honours program, students must obtain a GPA of 3.00 in the U2 year to continue in the Honours program for U3. Students are also encouraged to continue to complete a minimum of 27 graded

credits in their U2 and U3 academic years. This is also the minimum number of credits required to be eligible for fellowships and awards.

The application is available on the Psychology Department website at: <https://www.mcgill.ca/psychology/undergraduate/current-students/research-opportunities/research-courses>. The deadline is specified on the website. Candidates will be informed of the Department's decision via email before classes begin in September.

Awarding of the Honours degree will depend on both CGPA and a minimum grade of B in PSYC 380D1 Honours Research Project Seminar./PSYC 380D2 Honours Research Project Seminar. and PSYC 306 Research Methods in Psychology.. "First Class Honours" is awarded to students who obtain a minimum CGPA of 3.50 and a minimum grade of A- in PSYC 380D1 Honours Research Project Seminar./PSYC 380D2 Honours Research Project Seminar. and PSYC 306 Research Methods in Psychology.. "Honours" is awarded to students with a minimum CGPA of 3.00 and a minimum grade of B in PSYC 380D1 Honours Research Project Seminar./PSYC 380D2 Honours Research Project Seminar. and PSYC 306 Research Methods in Psychology..

Degree Requirements – B.Sc.

This program is offered as part of a Bachelor of Science (B.Sc.) degree.

To graduate, students must satisfy both their program requirements and their degree requirements.

- The program requirements (i.e., the specific courses that make up this program) are listed under the Course Tab (above).
- The degree requirements—including the mandatory Foundation program, appropriate degree structure, and any additional components—are outlined on the Degree Requirements page.

Students are responsible for ensuring that this program fits within the overall structure of their degree and that all degree requirements are met. Consult the Degree Planning Guide on the SOUSA website for additional guidance.

Program Prerequisites (0-9 credits)

Students planning to enter the B.Sc. Honours Psychology program should have completed an introductory course in general psychology, biology and statistics at the collegial level. Otherwise, they can complete them in their first year of study at McGill University (see below).

Introduction to Psychology or General Psychology in CEGEP is equivalent to PSYC 100 Introduction to Psychology. at McGill. Students who have not completed either of those courses are advised to take PSYC 100 Introduction to Psychology. in their first year.

Students who have completed General Biology 1 or 2 in CEGEP would have the recommended biology background. Students who have not completed one of those courses are advised to complete BIOL 111 Principles: Organismal Biology. or BIOL 112 Cell and Molecular Biology. during their first year.

CEGEP students may not take PSYC 204 Introduction to Psychological Statistics. if they have completed Probability & Statistics or Statistics with a minimum grade of 75%.

9 credits at the 300 level or above selected from:

Anatomy and Cell Biology (ANAT), Biochemistry (BIOC), Biology (BIOL), Chemistry (CHEM), Computer Science (COMP), Mathematics (MATH), Physiology (PHGY), Psychiatry (PYST), Psychology (PSYC).

Natural History Minor (B.Sc.) (24 credits)

Offered by: Redpath Museum (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 24

Program Description

The Minor Natural History involves the exploration of the natural world via specimen-based studies, object-oriented investigations and field studies. Museum collections are used to provide hands-on experience with real objects and specimens. The required course brings students to the Redpath Museum and other McGill natural science museums and exposes them to natural history methodologies and the value of specimen-based studies. Complementary course lists are drawn from a variety of disciplines to emphasize breadth and integration with the inclusion of specimen- or object-based courses and field courses in zoology, botany, and earth and environmental sciences. To ensure breadth, students are required to choose courses from among these lists. A compulsory field course component rounds out the program.

Required Course (3 credits)

Expand allContract all

Course	Title	Credits
REDM 400	Science and Museums.	3

Complementary Courses (21 credits)

Students select 21 credits from among four course lists (A (Zoology), B (Botany), C (Earth and Environmental Sciences), and D (Field Courses)) with the following specifications.

- At least 3 credits and no more than 9 credits from each of Lists A, B, and C.
- At least 3 credits from List D.
- No more than 3 credits from any one list may be at the 200 level.

Note: Students may take up to a maximum of 9 credits of courses outside the Faculties of Arts and of Science.

List A: Zoology

Education for Science Students Minor (B.Sc.) (18 credits)

Offered by: Education - Dean's Office (Faculty of Science)

Degree: Bachelor of Science

Program credit weight: 18

Program Description

This Minor allows Science students to develop or explore an interest in Education without committing themselves to completing a B.Ed. degree. Science students who have taken this Minor in Education will have completed some of the credits for the B.Ed. degree should they wish to enroll in that program. Students graduating with a B.Sc. should also consider the Master of Arts in Teaching and Learning (<https://>

www.mcgill.ca/dise/grad) if they are interested in obtaining a teaching license.

This minor program requires an application due to limited enrolment space. Please see <https://www.mcgill.ca/isa/student/minor> for procedures and deadlines.

For more information please contact:

Internships & Student Affairs Office, Faculty of Education

Animal Science (Thesis) (M.Sc.) (45 credits)

Offered by: Animal Science (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The MSc in Animal Science is a 45-credit, research, thesis-based program. Research can be in any relevant area of animal science under the supervision of an appropriate departmental academic staff member. The program provides a solid background in an area of animal science, critical thinking, leadership and science communication.

The program typically takes 2 years to complete.

Animal Science (Non-Thesis): Sustainable Agriculture (M.Sc.A.) (45 credits)

Offered by: Animal Science (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science, Applied

Program credit weight: 45

Program Description

Climate change and rising human population have increased the need for sustainable agricultural practices. The Sustainable Agriculture option is taken with a M.Sc. Applied (Non-Thesis) program, and designed for students who wish to supplement their basic degree with graduate studies in animal science, with a specific focus on sustainability in agriculture. Students will be exposed to different approaches to improve the sustainability of agricultural systems through specialized coursework and a research project. The program aims to provide graduate training in applied areas of animal production with a view toward integrating technology and management in sustainable animal production with allied areas of agricultural resource utilization.

Animal Science (Ph.D.)

Offered by: Animal Science (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

Since the Ph.D. is primarily a research degree, the amount of coursework required will depend on the background of the individual student, and must be approved by the student's advisory committee.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show

familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

Two seminar courses at the 500, 600, or 700 level.

Bioresource Engineering (Non-Thesis): Integrated Water Resources Management (M.Sc.) (45 credits)

Offered by: Bioresource Engineering (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science (M.Sc.) in Bioresource Engineering; Non-Thesis - Integrated Water Resources Management program is a one-year professional course-based program, including an internship, which is a central feature of the program. The program provides an essential approach to the sustainable management of our natural watershed resources, and focuses on the biophysical, environmental, legal, institutional, and socio-economic aspects of water use and management, in an integrated context.

Elective Courses (12 credits)

12 credits, at the 500 level or higher, of any relevant course(s) chosen in consultation with the Program Director.

Bioresource Engineering (Non-Thesis) (M.Sc.A.) (45 credits)

Offered by: Bioresource Engineering (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science Applied

Program credit weight: 45

Program Description

The non-thesis option is aimed toward individuals already employed in industry or seeking to improve their skills in specific areas (soil and water/structures and environment/waste management/environment protection/post-harvest technology/food process engineering/environmental engineering) in order to enter the engineering profession at a higher level.

Candidates must meet the qualifications of a professional engineer either before or during their M.Sc. Applied program.

Each candidate for this option is expected to establish and maintain contact with his/her academic adviser in the Department of Bioresource Engineering some time before registration in order to clarify objectives, investigate project possibilities and plan a program of study.

Bioresource Engineering (Non-Thesis): Integrated Food and Bioprocessing (M.Sc.A.) (45 credits)

Offered by: Bioresource Engineering (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science Applied

Program credit weight: 45

Program Description

The Master of Science(Applied) [M.Sc.(A.)] in Bioresource Engineering; Non-Thesis - Integrated Food and Bioprocessing program provides the tools to understand how food and agricultural production interact to better manage agricultural, food, and biomass systems for the adequate supply of wholesome food, feed, fiber, biofuel, and any other bio-based material. The program focuses on the skills needed to assess existing production, delivery, and quality management systems; introduce improvements; and communicate effectively

with policymakers and colleagues in multi-disciplinary teams. The program provides up-to-date, world-class knowledge on techniques for adequate process design and management of biomass production strategies for the delivery of quality food, natural fiber, biochemicals, biomaterials, and biofuels, in a sustainable and environment-friendly way that benefits all. Training activities will include laboratory research and/or industrial/government internships.

Bioresource Engineering (Thesis): Environment (M.Sc.) (45 credits)

Offered by: Bioresource Engineering (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Bioresource Engineering (Ph.D.)

Offered by: Bioresource Engineering (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

Candidates for the Ph.D. degree will normally register for the M.Sc. degree first. In cases where the research work is proceeding very satisfactorily, or where the equivalent of the M.Sc. degree has been completed previously, candidates may be permitted to proceed directly to the Ph.D. degree.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Course	Title	Credits
BREE 651	Departmental Seminar M.Sc. 1.	1
BREE 652	Departmental Seminar M.Sc. 2.	1
BREE 699	Scientific Publication.	3
ENVR 615	Interdisciplinary Approach Environment and Sustainability.	3

Complementary Courses

Courses of study selected for a Ph.D. program will depend on the existing academic qualifications of the candidate, and on those needed for effective pursuit of research in the chosen field. Candidates are encouraged to take an additional course of study of their own choice in some field of the humanities, sciences, or engineering not directly related to their research. The program will be established by consultation of the candidate with a committee that will include the Research Director and at least one other professor.

Program Description

This program is currently not offered.

The M.Sc. in Bioresource Engineering; (Thesis) Environment is a research program offered in collaboration with the Bieler School of Environment. As a complement to the unit's expertise, the program considers how various dimensions (scientific, social, legal, ethical.) interact to define environment and sustainability issues.

Biotechnology (Non-Thesis) (M.Sc.A.) (45 credits)

Offered by: Parasitology (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science Applied

Program credit weight: 45

Program Description

The M.Sc.(Applied) in Biotechnology; Non-Thesis provides training in cell and molecular biology, and protein biochemistry, with a strong focus on the molecular/biochemical sciences. Concurrently, it provides teaching in management and the business aspect of biotechnology. The program also includes practical training in a laboratory and internships.

Food Science and Agricultural Chemistry (Thesis) (M.Sc.) (45 credits)

Offered by: Food Science&Agr.Chemistry (Faculty of Agricultural and Environmental Sciences)
Degree: Master of Science
Program credit weight: 45

Program Description

For candidates entering the M.Sc. program without restrictions, i.e., those not requiring a qualifying term/year, the M.Sc. degree consists of 45 graduate credits. These credits are obtained through a combination of graduate courses and a research thesis.

The residence time for a M.Sc. degree is three academic terms based on unqualified entry into the M.Sc. program. Students are encouraged to complete their studies within this time frame.

Food Science & Agricultural Chemistry: Food Safety (Non-Thesis) (M.Sc.) (45 credits)

Offered by: Food Science&Agr.Chemistry (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The program is intended to train graduate students as specialists in food safety with the expectation that graduates will be well prepared

academically to take on the challenging food safety events and issues that emerge both in Canada and globally. The program will cover food safety through the entire food supply chain from food production through processing/manufacturing to the food consumer; the courses which make up the program reflect the food safety considerations at the different stages of the farm to table food supply chain.

Food Science and Agricultural Chemistry (Ph.D.)

Offered by: Food Science&Agr.Chemistry (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

Candidates will be judged principally on their research ability. Coursework will be arranged in consultation with the student's departmental graduate advisory committee.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (9 credits)

Note: Candidates should be prepared to take the Comprehensive Preliminary Examination before the end of the second year of the program.

Human Nutrition (Non-Thesis): Dietetics Credentialing (M.Sc.A.) (83 credits)

Offered by: Human Nutrition (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science Applied

Program credit weight: 83

Program Description

The M.Sc.(Applied) in Human Nutrition; Non-Thesis – Dietetics Credentialing includes competency-based professional practice (Stage) experiences in clinical nutrition care, public health nutrition, food provision management and research. The program focuses on nutrition and food expertise, leadership, communication, management skills and critical thinking. This program is accredited by Accreditation Canada, and graduates apply to the Ordre des diététistes-nutritionnistes du Québec (ODNQ) following the "règlement sur les normes d'équivalence de diplôme et formation" application procedures. Graduates from the program meet all the standards and requirements of this professional order (ODNQ) and are eligible to apply to any other regulatory body in any other province in Canada.

Registered Dietitian Credentialing (Gr. Dip.) (30 credits)

Offered by: Human Nutrition (Faculty of Agricultural and Environmental Sciences)

Program credit weight: 30

Program Description

The Graduate Diploma in Registered Dietitian Credentialing is open to students with a Ph.D. in Human Nutrition from the School of Human Nutrition who would like to become a member of the Ordre professionnel des diététistes du Québec (OPDQ). The Diploma consists of 30 weeks of stage placements in Clinical, Community, and Management rotations. Before acceptance into the program, students will be required to complete courses in clinical nutrition, and certain required courses in preparation for Stage; and to demonstrate a basic level of French competency. This preparation may be done during the Ph.D. program, or in a qualifying year after the Ph.D. On completion, students will meet OPDQ credits and professional practice requirements for licensure as a registered dietitian.

The Graduate Diploma is open to students who have completed a graduate degree with the School of Human Nutrition including NUTR 603 Credentialing in Dietetics..

Agricultural Economics (Thesis) (M.Sc.) (45 credits)

Offered by: Agricultural Economics (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

Graduate students receive rigorous training in economic theory, institutional economics, and quantitative methods, with a focus on applying economic concepts and tools to identify, define, analyze, and solve economic problems in the agri-food sector and the environment. The ideal prior preparation is an undergraduate degree in Agricultural Economics or Economics, including undergraduate courses in intermediate economic theory (micro and macro), calculus, algebra, statistics, and econometrics.

Attention is given to analytical skills in the broad areas of agricultural and environmental economics. Students may specialize, by way of their research program, in agribusiness, resource economics, development, finance, marketing, trade, policy, and environmental economics. The program is intended to prepare graduates for rewarding careers in research, analysis, and decision-making in academia, private, NGO, and government sectors.

Entomology (Thesis) (M.Sc.) (45 credits)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Entomology is a thesis program of 45 credits. The program involves research primarily within the discipline of entomology but also across multiple disciplines of basic and applied environmental sciences, that advances both theory and applied management of natural resources. Specialties within the program include terrestrial arthropod ecology, physiology, zoogeography, diversity, and systematics.

Microbiology (Thesis) (M.Sc.) (45 credits)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Microbiology is a thesis program of 45 credits. The program involves research within, and often across, multiple disciplines of basic and applied environmental sciences that advances our fundamental knowledge about microorganisms as well as leads to improved efficiencies of our managed ecosystems. Specialties within the program range from the study of microbial ecology and diversity in natural, human-induced and extreme environments, molecular genetics, bioinformatics, and bacterial pathogens.

Renewable Resources (Thesis): Neotropical Environment (M.Sc.) (45 credits)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The McGill-STRI Neotropical Environment Option (NEO) is a research-based option for Masters or PhD students in the departments of Anthropology, Biology, Bioresource Engineering, Geography, Natural Resource Sciences, Plant Science, and Political Science at McGill University. NEO is aimed at students who wish to focus their graduate research on environmental issues relevant to the Neotropics and Latin American countries. NEO favors interdisciplinary approaches to research and learning through the participation of researchers from McGill and from STRI. Students will complete their research in Latin America and NEO's core and complementary courses will be taught in Panama. NEO's educational approach seeks to facilitate a broader understanding of tropical environmental issues and the development of skills relevant to working in the tropics.

Whether applying to a Master or a PhD, students are expected to meet all the degree.

NRSC 644	M.Sc. Update Seminar.	1
NRSC 651	M.Sc. Final Seminar.	1

Note: Participation in the MSE-Panama Symposium presentation in Montreal is also required.

Elective Courses (3 credits)

3 credits, at the 500 level or higher, on environmental issues to be chosen in consultation with and approved by the student's supervisor AND the Neotropical Environment Options Director.

Entomology (Ph.D.)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy in Entomology is a program that involves research primarily within the discipline of entomology but also across multiple disciplines of basic and applied environmental sciences, that advances both theory and applied management of natural resources. Specialties within the program include terrestrial arthropod ecology, physiology, zoogeography, diversity, and systematics.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

Course	Title	Credits
NRSC 701	Ph.D. Comprehensive Examination.	0
NRSC 751	PhD Research Proposal.	0
NRSC 752	Teaching Experience.	0

NRSC 753	PhD Research Progress Report.	0
NRSC 754	PhD Final Research Report.	0

Coursework

Course requirements are specified by the staff in the discipline, but are flexible and depend largely on the student's background, immediate interests, and ultimate objectives.

Microbiology (Ph.D.)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy in Microbiology involves research within, and often across, multiple disciplines of basic and applied environmental sciences that advances our fundamental knowledge about microorganisms as well as leads to improved efficiencies of our managed ecosystems. Specialties within the program range from the study of microbial ecology and diversity in natural, human-induced and extreme environments, molecular genetics, bioinformatics, and bacterial pathogens.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Renewable Resources (Ph.D.)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy in Renewable Resources is a Resources program that involves research within, and often across, multiple disciplines of basic and applied environmental sciences that advances both theory and applied management of natural resources. Specialties within the program include environmental and ecological economics, environmental health and toxicology, forest ecology, fish and fisheries biology, landscape ecology, limnology, micrometeorology, soil science, and wildlife biology.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Renewable Resources: Neotropical Environment (Ph.D.)

Offered by: Natural Resource Sciences (Faculty of Agricultural and Environmental Sciences)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy in Renewable Resources; Neotropical Environment is a research-based program offered in association with several University departments, the McGill School of Environment, and the Smithsonian Tropical Research Institute (STRI-Panama). The program involves research on environmental issues relevant to the Neotropics and Latin American countries, and it favours interdisciplinary approaches to research and learning, and tropical environmental issues and the skills relevant to working in the tropics.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

3 credits, at the 500 level or higher, on environmental issues to be chosen in consultation with and approved by the student's supervisor AND the Neotropical Environment Options Director.

Parasitology (Thesis) (M.Sc.) (45 credits)

Offered by: Parasitology (Faculty of Agricultural and Environmental Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Parasitology focuses on the phenomenon of parasitism in humans, livestock, and other animals, and the control of parasitic diseases, including the interface of parasitism/immunity/nutrition in the context of the host-parasite. The research thesis is under the direction of a supervisor.

Note: ANTH 602 Theory 1. and ANTH 603 Theory 2. should be taken in the first year of the program.

Complementary Courses (12 credits)

12 credits at the 500 and 600 level selected from courses within and/or outside the Department relevant to the student's research area in consultation with the student's supervisor and advisory committee.

A maximum of 6 credits can be taken from other programs with approval of the supervisor and GPD.

Elective Courses (0-24 credits)

A maximum of 24 credits at the 500 level or higher can be taken inside or outside the Department (e.g., language training, methodological training, history or regional studies courses).

Language Requirement

A language examination, normally French, must be passed before an oral examination of the research proposal may be scheduled. Francophone students can satisfy the language requirement by demonstrating competency in English. The purpose of the language requirement is to ensure that the student has access to anthropological literature in at least two languages. Under special circumstances, a language other than English or French may be substituted, provided that there is sufficient anthropological literature on the student's research topic in that language.

The Ethics application and the language exam must be submitted before the proposal defence. They can be submitted at any point during PhD2 and PhD3 (before the date of the proposal defence is chosen).

Anthropology: Neotropical Environment (Ph.D.)

Offered by: Anthropology (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

All new Neotropical Environment students will be encouraged to spend the month of August (prior to September admission) in Panama to take their first core course and familiarize themselves with the country.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (18 credits)

If admitted to Ph.D. 2.

Note: To ensure that students understand prior research, they must define three subfields that intersect with the thesis topic.

The Ethics application and the language exam must be submitted before the proposal defence. They can be submitted at any point during PhD2 and PhD3 (before the date of the proposal defence is chosen.)

If admitted to Ph.D. 1.

In addition to the above requirements, 15 credits from courses at the 500 level or higher within and/or outside of the Department relevant to the student's research area in consultation with the student's supervisor and/or PhD committee.

Art History (Thesis) (M.A.) (45 credits)

Offered by: Art History & Communications (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Art History with the thesis option requires the completion of 45 credits of coursework.

The program is designed to be completed in four semesters, but may be completed in three semesters. There is a time limit to complete the M.A. degree in three years (full-time) or five years (part-time).

For further details on thesis preparation and submission consult www.mcgill.ca/gps/thesis/thesis-guidelines.

3 credits of the 15 credits of complementary coursework may be taken at another university in Montreal.

Art History (Ph.D.)

Offered by: Art History & Communications (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Art History offers rigorous methodological and theoretical training from antiquity to the contemporary moment that is international in scope. The program focuses on advanced skills in research, literature review, original thinking, and academic writing.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the

thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Communication Studies (Thesis) (M.A.) (45 credits)

Offered by: Art History & Communications (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Communication Studies offers advanced training in the critical, historical, and theoretical analysis of communication in culture, communication technology, and communication policy. M.A. students pursue coursework and write an M.A. thesis that reflects sustained analysis of a topic in Communication Studies. The M.A. degree is academic in character, and does not include professional training in media production.

East Asian Studies (Thesis) (Ad Hoc) (M.A.) (45 credits)

Offered by: East Asian Studies (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Master of Arts in East Asian Studies is an Ad Hoc program that focuses on the interdisciplinary and disciplinary approaches to studying cultures, literatures, media, arts, religions, and gender and sexuality in East Asia and beyond.

Program Requirements

The Department only offers a thesis option. The M.A. program with thesis includes:

1. four 3-credit graduate courses (12 credits);
2. one graduate 3-credit seminar in theory/methodology (3 credits);
3. one graduate 6-credit seminar or two graduate 3-credit seminars (6 credits); and
4. thesis (24 credits).

Language Courses

1. A maximum of 6 credits of language courses at the 500 level or in a classical Asian language may be counted toward course requirements.
2. Students must have fourth-level language equivalency by the completion of their M.A. program.

East Asian Studies (Ad Hoc) (Ph.D.)

Offered by: East Asian Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Graduate Studies Committee will assign an advisory committee to advise the student and specify the student's program of study.

Exceptional students with appropriate background at the undergraduate level may be admitted directly into the Ph.D. program.

Students must complete at least 24 course credits, with a grade point average of 3.5 or better; this coursework must be chosen to identify three distinct fields for the Comprehensive Evaluation. Students may take up to two 3-credit courses or one 6-credit course in another department with the approval of the Graduate Program Director.

There are four requirements for obtaining the doctoral degree:

1. Coursework – 24 credits at the 600 or 700 level with a grade point average of 3.5 or better. On the basis of this coursework, the student should identify three distinct fields for the Comprehensive Evaluation. Students may take up to 6 credits in another department with the approval of the Graduate Program Director.

2. Language – Candidates will be required to demonstrate reading knowledge of a second Asian language, which may include either modern or literary (classical) language, in addition to the primary Asian language of their research. Candidates will also be expected to demonstrate reading knowledge of both French and English.
3. Ph.D. Comprehensive Evaluation – The student is required to pass the Comprehensive Evaluation within one year after completing coursework. Exceptions have to be approved by the Graduate Program Director.
4. Doctoral Dissertation – A thesis proposal (15-25 pages) should be submitted within six months after successful completion of the Ph.D. Comprehensive Evaluation, after consultation with the Graduate Program Director and the thesis supervisor. Before submission of the dissertation, candidates are expected to spend time in Asia researching their project.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Economics (Thesis) (M.A.) (45 credits)

Offered by: Economics (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Master of Arts in Economics (Thesis) offers training in economics. It focuses on economic theory, empirical techniques, and policy applications, including microeconomics, macroeconomics, and econometrics.

Economics (Non-Thesis): Population Dynamics (M.A.) (45 credits)

Offered by: Economics (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Population Dynamics Option (PDO) is open to M.A. (non-thesis) students in Economics specializing in Population Dynamics. The purpose of this program is to provide graduate training in demographic methods (including life table analyses) and enhance students' knowledge of critical population issues. As such, students will be required to take a course on demographic methods and a course in microeconomic methods relevant for population studies. In addition, students will take one complementary course in Economics, which focuses on a particular population issue such as population health, migration, aging, family dynamics, and labour markets and skills acquisition. Students will attend at least five of the seminars given in the Social Statistics and Population Dynamics Seminar series. Research topics must be related to population dynamics and approved by the PDO coordinating committee.

Economics (Ph.D.)

Offered by: Economics (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Economics focuses on microeconomics, macroeconomics and econometrics. Specialization in three fields of economics is offered.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate

ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

English (Ph.D.)

Offered by: English (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The PhD in English focuses on research topics related to literature, drama and theatre, cultural studies, authorship and publishing, and critical theory.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Langue et littérature françaises (Ph.D.)

Offered by: French Language & Literature

Degree: Doctor of Philosophy

Program Description

Le programme de « doctorat en langue et littérature françaises » est axé avant tout sur la recherche, c'est-à-dire sur la production d'une thèse qui représente une contribution significative à l'avancement des connaissances. La thèse doit démontrer que l'étudiante.e a reçu une solide formation en critique littéraire, que son savoir, sa maîtrise des documents et d'une méthode lui ouvrent une carrière sérieuse de chercheur.euse et de professeur.e. Il s'agit d'une composition originale, ce qui n'exclut pas le renouvellement d'un sujet déjà traité. Le candidat ou la candidate doit prouver par ce travail qu'il ou elle a acquis une compétence méthodologique suffisante, qu'il ou elle sait délimiter un champ de réflexion, distinguer l'essentiel de l'accessoire, établir et utiliser une bibliographie exhaustive et manier la langue avec justesse. Le programme est conçu pour durer quatre ans.

Thèse

Une thèse de doctorat doit constituer une recherche inédite et représenter un apport distinct au savoir. Elle doit témoigner de la connaissance des travaux antérieurs réalisés dans le domaine et montrer la capacité de planifier et d'accomplir la recherche, d'organiser les résultats et de défendre la démarche et les conclusions de manière savante. Le travail de recherche présenté doit correspondre aux normes actuelles de la discipline; la thèse doit en outre clairement montrer comment son contenu fait progresser les connaissances dans le domaine. Enfin, la thèse doit être rédigée conformément aux normes d'expression universitaire et savante et de publication dans le domaine public.

Cours complémentaires (6 ou 9 crédits)

6 ou 9 crédits de séminaires au choix de niveau 600 ou plus.

Cours optionnel (0 ou 3 crédits)

Les étudiants de doctorat peuvent obtenir un maximum de 3 crédits en suivant des cours hors du Département, que ce soit à McGill (cours décrits dans l'annuaire des Études supérieures et postdoctorales ('University Calendar of Graduate and Postgraduate Studies') ou dans une autre université. L'étudiant qui choisit cette option doit obtenir l'autorisation du Directeur des études de 2e et 3e cycles et de la recherche, autorisation qui ne sera accordée que si les cours en question cadrent avec son programme d'études et sont du niveau approprié.

Langue et littérature françaises: études sur les femmes et le genre (Ph. D.)

Offered by: French Language & Literature

Degree: Doctor of Philosophy

Program Description

Le programme de « doctorat en langue et littérature françaises; études sur les femmes et le genre » (Gender and Women's Studies) est un programme pluridisciplinaire portant sur des questions reliées au genre et aux recherches et méthodologies féministes, et qui remplit en même temps toutes les exigences du programme de doctorat du Département des littératures de langue française, de traduction et de création. Comme tel, il est axé avant tout sur la recherche, c'est-à-dire sur la production d'une thèse qui représente une contribution significative à l'avancement des connaissances et qui doit porter sur un sujet explicitement lié au genre ou aux études sur les femmes. La thèse doit démontrer que l'étudiant.e a reçu une solide formation en critique littéraire, que son savoir, sa maîtrise des documents et d'une méthode lui ouvrent une carrière sérieuse de chercheur.euse et de professeur.e. Il s'agit d'une composition originale, ce que n'exclut pas le renouvellement d'un sujet déjà traité. Le candidate ou la candidate doit prouver par ce travail qu'il ou elle a acquis une compétence méthodologique suffisante, qu'il ou elle sait délimiter un champ de réflexion, distinguer l'essentiel de l'accessoire, établir et utiliser une bibliographie exhaustive et manier la langue avec justesse. Le programme est conçu pour durer quatre ans.

History (Ph.D.)

Offered by: History and Classical Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in History focuses on how to understand the past through a combination of intensive primary source research and deep familiarity with the relevant historiography, including the techniques of historical research and interpretation. It requires specialization in three fields of historical inquiry and a Ph.D. thesis research project.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

Expand allContract all

Course	Title	Credits
HIST 701	Doctoral Seminar.	3
HIST 702	Comprehensive Examination - Major Field.	0
HIST 703	Comprehensive Examination - First Minor Field.	0
HIST 704	Comprehensive Examination - Second Minor Field.	0

Complementary Courses

A maximum of 9 credits previously completed at the graduate level, whether at McGill or elsewhere. Courses must be at the 500, 600, or 700 level. Up to 6 credits may be taken in another department.

Language Requirement

Ph.D. candidates must offer one foreign language for examination purposes. Candidates may need a reading knowledge of such other languages as are required for research purposes in their major field. The Department expects that candidates will have successfully demonstrated competence in the one required language by the end of their Ph.D. 3 year.

Classics (Non-Thesis) (M.A.) (45 credits)

Offered by: History and Classical Studies (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Classics; Non-Thesis offers advanced training in the scholarly discipline of classical studies in a variety of fields. The program aims to develop proficiency both in technical areas of the discipline, especially Ancient Greek and Latin languages, and in critical reading, writing, and research skills. This program may be completed in three terms, but it is normally completed in two years.

Research Project (18 credits)

Course	Title	Credits
CLAS 500	Classics Seminar.	3
CLAS 610	Readings in Latin Literature.	3
CLAS 612	Topics in Latin Literature.	3
CLAS 620	Readings in Ancient Greek Literature.	3
CLAS 622	Topics in Ancient Greek Literature.	3
CLAS 685	Methods Seminar.	3

Complementary Courses (9 credits)

9 credits of 500-level or 600-level courses in Classics, Ancient History, or another classics-related discipline. Classics-related courses must be chosen in consultation with the classics graduate advisor.

A maximum of 6 credits of complementary courses may be taken outside the Department of History and Classical Studies, unless approved by the Classical Studies Committee.

Examinations

Each candidate for the MA degree must pass three exams: Ancient Greek translation, Latin translation, and classical literature. The exams will be based on a set reading list of classical texts and scholarship. The translation exams will test the student's mastery of ancient Greek and Latin; it is assumed students will require advanced proficiency in each language to pass the relevant exam. The classical literature exam will test the student's general knowledge of important authors and texts in translation and classical scholarship.

All exams will be marked pass/fail and may be taken more than once.

Exams will be taken as 0-credit courses, comparable to PhD comps exams.

Exams must be passed within two years of starting the program and within three attempts, or the student will not be allowed to continue in the program.

Classics (Thesis) (M.A.) (45 credits)

Offered by: History and Classical Studies (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Classics (Thesis) emphasizes the writing of a major research project. This program is designed for students who are already highly proficient in ancient languages, have a strong foundation in classical studies, and can work independently. This program is designed

to be completed in three terms, though many students prefer to complete it in two years.

Information Studies (Ph.D.)

Offered by: Information Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. program provides an opportunity to study interdisciplinary research topics within the field of library and information studies at the doctoral level. Students develop scholarly and innovative expertise in one of the four research areas within information studies:

1. information-seeking behaviour;
2. human-computer interaction;

3. information resources in context;
4. knowledge management and representation, as well as an awareness of the inter-relatedness of these areas.

Students begin with a set of common core courses and proceed to specialization through advanced coursework and dissertation topics focused on areas of expertise that are supported by the research interests of current faculty members.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (12 credits)

Students may also be required to take additional courses to prepare them for their research.

Cybersecurity (Gr. Cert.) (15 credits)

Offered by: Information Studies (Faculty of Arts)

Program credit weight: 15

Program Description

The Graduate Certificate in Cybersecurity is an online program that focuses on the fundamental concepts of cybersecurity: threats, cryptography, and vulnerability; the types of cyber-attacks, how they are implemented, and commonly-used hardening techniques and controls; threat and risk assessments at the network system, operating system, and software application levels; the security readiness of an organization; cybersecurity incidents and how to communicate them within an organization; policies to meet current security standards for an organization to adopt; ethical concerns in terms of security, privacy, and information guidelines and policies within national and international contexts. While majority of the course components will be delivered asynchronously, a very small number of activities may require students to perform synchronously.

INFS 684	Information Security Management.	3

Digital Archives Management (Gr. Cert.) (15 credits)

Offered by: Information Studies (Faculty of Arts)

Program credit weight: 15

Program Description

This program is intended to prepare students to work in the area of digital archives. The graduate courses in the program will focus on principles of organization of information, practices in archival studies, and strategies for digital curation and enterprise content management. This is an entry-level, graduate program that may lead to another graduate certificate or to the M.I.St. program, however, none of the courses taken in the graduate certificate can be credited towards the M.I.St. program once a graduate certificate has been completed.

Information Architecture and Design (Gr. Cert.) (15 credits)

Offered by: Information Studies (Faculty of Arts)

Program credit weight: 15

Program Description

The Graduate Certificate in Information Architecture and Design is intended to prepare students to work as information architects and designers. The graduate courses in the program will prepare students to design and assess information systems (text, multimedia), databases, websites, and interfaces. Techniques for data mining and issues related to information security are also covered. This is an entry-level graduate program that may lead to another certificate or to the M.I.St. (Master of Information Studies).

Information and Knowledge Management (Gr. Cert.) (15 credits)

Offered by: Information Studies (Faculty of Arts)

Program credit weight: 15

Program Description

This program is intended to prepare students to work as information and knowledge managers in a variety of sectors. The graduate courses in the program will focus on the information behavior of individuals, networks and organizations, and the nature of tacit and explicit knowledge services and strategies for identifying, capturing, organizing, storing, sharing, and using knowledge throughout the IM/KM lifecycle in order to learn and improve. Tools and techniques for codifying knowledge and facilitating collaboration in networks are also covered. This is an entry-level, graduate program that may lead to another graduate certificate or to the M.I.St. program, however, none of the courses taken in the graduate certificate can be credited towards the M.I.St. program once a graduate certificate has been completed.

Islamic Studies (Thesis) (M.A.) (45 credits)

Offered by: Islamic Studies (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Islamic Studies is a language- and research-intensive program that focuses on the variety of specializations offered at the Institute in humanities and social-science disciplines (history, law, philosophy, literature, Qur'anic studies, gender studies, political science, anthropology), from the classical period to the contemporary era. The program focuses on knowledge of Arabic and/or Persian, with additional Islamic language training offered in Turkish or Urdu for linguistic background in the geographic areas of specialization. The program is normally completed in two years.

Students must demonstrate proficiency in Arabic or Persian at the second-year level as evidenced by completion of ISLA 622D1 Arabic for Reading 2./ISLA 622D2 Arabic for Reading 2. or ISLA 642D1 Persian for Reading 2./ISLA 642D2 Persian for Reading 2., respectively, or by an examination administered by the Institute.

Note that the courses taken to fulfill the second-year level requirements will not be credited towards the course requirements.

Islamic Studies (Ph.D.)

Offered by: Islamic Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Islamic Studies focuses on the history, law, philosophy, literature, Qur'an, gender, politics, anthropology studies in relation to Islamic studies, from the classical period to the contemporary era. The program includes studies on the language of Arabic and/or Persian, with additional Islamic language training offered in Turkish or Urdu. The program should be completed within six years.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Course (3 credits)

Expand allContract all

Course	Title	Credits
ISLA 603	Introductory: Research Materials - Islamic Studies.	3
ISLA 701	Comprehensive Examination.	0

Complementary Courses (27 credits)

27 credits of courses at the 500 level or higher, including 6 credits at the 600 or 700 level of seminars offered by the Institute of Islamic Studies.

With the permission of the Institute, up to 6 credits, at the 500 level or higher could be taken in other departments at McGill or other institutions.

With the approval of the student's supervisor, courses at the 500 level or higher taken with an IIS faculty member or an associate member in other departments (i.e., History, Anthropology, Political Science) can count toward the coursework requirements in the same way as ISLA courses.

To avoid over-specialization, a maximum of 9 credits of content courses (i.e., courses that are not primarily devoted to language instruction) can be taken with a single Institute professor.

Language Requirements *

* Note: For the three-year-level language requirement, ISLA 521D1/D2, ISLA 541D1/D2, ISLA 621D1/D2 and ISLA 641D1/D2 will not count toward the 27 complementary credits.

All Ph.D. students are required to have completed three years of Arabic language or Persian language study at the IIS. Students who do not

take the third level of Arabic at the Institute may demonstrate their competence by taking a proficiency examination set by the academic staff of the IIS.

In addition to Arabic or Persian, all Ph.D. students are required to have completed the equivalent of two years of language study at the IIS of another Islamic language. They may demonstrate competence in this language by taking a proficiency examination set by the academic staff of the IIS. Students are, of course, responsible for whatever higher levels are required for their research.

Islamic Studies: Gender and Women's Studies (Ph.D.)

Offered by: Islamic Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The graduate option in Gender and Women's Studies is an interdisciplinary program for students who meet the degree requirements in Islamic Studies who wish to earn 9 credits of approved coursework focusing on gender and women's studies, and issues in feminist research and methods. To avoid over-specialization, a maximum of 9 credits of content courses (i.e., courses that are not primarily devoted to language instruction) can be taken with a single Institute professor.

Language Requirements *

* Note: For the three-year-level language requirement, ISLA 521D1/D2, ISLA 541D1/D2, ISLA 621D1/D2 and ISLA 641D1/D2 will not count toward the 21 complementary credits.

All Ph.D. students are required to have completed three years of Arabic language or Persian language study at the IIS. Students who do not take the third level of Arabic or Persian at the Institute may demonstrate their competence by taking a proficiency examination set by the academic staff of the IIS.

In addition to Arabic or Persian, all Ph.D. students are required to have completed the equivalent of two years of language study at the IIS of another Islamic language. They may demonstrate competence in this language by taking a proficiency examination set by the academic staff of the IIS. Students are, of course, responsible for whatever higher levels are required for their research.

Jewish Studies (Thesis) (M.A.) (45 credits)

Offered by: Jewish Studies (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

An M.A. in Jewish Studies (thesis option) is offered in the following areas: History of the Jewish Interpretation of the Bible, Eastern European Jewish History, Jewish Thought, Hebrew Literature, and Modern Jewish Literatures. These areas of specialization are broadly construed to accommodate the range of research interests in the Department. The M.A. can be completed in one year, though most students spend two years in the program.

Note: Students can choose from either the Jewish Studies Stream or History of the Jewish Interpretation of the Bible Stream.

German (Ph.D.)

Offered by: Languages,Literatures,Cultures (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in German Studies combines the rigor of traditional philological inquiry into the history of German literature with a

broader cultural studies approach that attends to the historical and technological aspects of German

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Course

Expand allContract all

Course	Title	Credits
GERM 701	Ph.D. Comprehensive Examination.	0

Complementary Courses

Eight 3-credit courses (24 credits); with the approval of the Graduate Studies Committee, students are permitted to take a maximum of 6 credits in another department.

Language Requirement

French Language examination or Latin (if specializing in German Literature before 1600).

Original research leading to new insights is a prerequisite for the acceptance of a Ph.D. thesis.

As a rule, it will take a student at least three years after the M.A. degree to complete the requirements for the Ph.D. degree. Students who have not spent an appreciable length of time in a German-speaking country are advised to spend one year at a university in such a country, for which credit may be given in the above program.

German (Thesis) (M.A.) (45 credits)

Offered by: Languages,Literatures,Cultures (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Master of Arts in German is a 45- credit program exploring German literature, film, culture, literary theory and/or digital humanities. Areas of interest include memory and cinema studies, realism, Berlin, turn-of-the-century Vienna, Kafka, Nietzsche, Goethe, Heine, the Frankfurt School, digital humanities, and cultural analytics. Students must complete a thesis.

Thesis Courses (27 credits)

Expand allContract all

Course	Title	Credits
GERM 690	Thesis Research 1.	9
GERM 691	Thesis Research 2.	9
GERM 692	Thesis Research 3.	9

Complementary Courses (18 credits)

18 credits chosen from any graduate seminar listed as offered in German Studies and, with permission of the Graduate Program Director in Languages, Literatures, and Cultures. With the approval of the Graduate Studies Committee, students are normally permitted to take a maximum of 3 credits in another department.

Originality of research is not required for the thesis, but the student must show a critical understanding of the subject as demonstrated by the logical development of an argument that is supported by adequate documentation.

Students are expected to complete the degree requirements in two years. They are expected to begin work on their thesis before the end of the first session. The thesis should demonstrate ability to organize the material under discussion, and should be succinct and relevant.

German (Non-Thesis) (M.A.) (45 credits)

Offered by: Languages,Literatures,Cultures (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Master of Arts in German; Non-Thesis is a 45- credit program exploring German literature, film, culture, literary theory and/or digital humanities. Areas of interest include memory studies, realism, cinema, Berlin, turn-of-the-century Vienna, Kafka, Nietzsche, Goethe, Heine, the Frankfurt School, digital humanities, and cultural analytics. Students must complete three research papers.

Offered by: Mathematics and Statistics (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Mathematics and Statistics focuses on research in the mathematical or statistical sciences, including the completion of original research publishable in mainstream refereed journals.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

Expand allContract all

Course	Title	Credits
MATH 701	Ph.D. Qualifying Examination .	0

Complementary Courses (21 credits)

21 credits of courses at the 500 level or above, including at least 6 credits at the 600 level or above. The choice of courses to fulfill this requirement must be prior approved by the student's Advisory Committee. The Department recommends that students take complementary courses in at least three different areas of Mathematics and Statistics.

All credits of complementary courses should be taken before the end of PhD 3. In exceptional circumstances, an extension can be granted by the student's Advisory Committee.

Students who wish to take more than 8 credits of complementary courses from outside the Department should request approval from the Graduate Program Director.

Philosophy (Thesis): Bioethics (M.A.) (45 credits)

Offered by: Philosophy (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Master of Arts in Philosophy; Bioethics is an interdisciplinary academic program that emphasizes both the conceptual and the practical aspects of bioethics. The standard completion time is 2 years. A thesis is required.

12 credits are to be taken in any graduate courses required or accepted by the Department of Philosophy for the granting of a master's degree.

Philosophy (Ph.D.)

Offered by: Philosophy (Faculty of Arts)

Degree: Doctor of Philosophy

The Ph.D. in Philosophy offers training in a wide range of areas of philosophy, with specializations in ancient and medieval (especially Arabic) philosophy; early modern philosophy; Kant; philosophy of mind; philosophy of Artificial Intelligence; aesthetics; moral and political philosophy; feminist philosophy; history and philosophy of science and mathematics; and contemporary European philosophy. The program includes a candidacy paper and the preparation and defence of a thesis.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Skills Requirement

One research language at the advanced level or two research languages at the intermediate level. Students whose research specialization does not require linguistic competence in other languages may choose, with approval from their supervisors and the Director of Graduate Studies, to take a complementary course that will enhance their research skills instead of satisfying the language requirement.

Logic Requirement

The Logic requirement is satisfied in one of three ways:

1. The student sits a deductive logic examination set by the department.
2. The student takes and passes a deductive logic course approved by the department.
3. The student has taken an approved deductive logic course at another institution.

These credits do not count towards this program's credit requirements. The requirement must be satisfied by the end of the second year in the program.

Philosophy: Environment (Ph.D.)

Offered by: Philosophy (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

This program is currently not offered.

The Ph.D. in Philosophy; Environment is a research program offered in collaboration with the Bieler School of Environment. As a complement to the unit's expertise, the program considers how various dimensions (scientific, social, legal, ethical) interact to define environment and sustainability issues.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Philosophy: Gender and Women's Studies (Ph.D.)

Offered by: Philosophy (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The PhD in Philosophy: Gender and Women's Studies is an interdisciplinary program that focuses on gender and women's studies and issues in feminist research and methods. The candidacy paper and thesis must be on a topic centrally related to issues of gender and/or women's studies.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the

thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Political Science (Thesis) (M.A.) (45 credits)

Offered by: Political Science (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. program is generally recognized as among the most demanding and rewarding in Canada. Students take courses in two or more sub-fields of political science. The focus of the program is to provide training in the discipline of political science and prepare students for further graduate work. Students need to demonstrate an ability to design and execute with competence a major piece of research, comparable to a full#length article in a scholarly journal.

Thesis Courses (24 credits)

A thesis is required to demonstrate proficiency in research. It is normally about 60 pages long and is subject to evaluation by one examiner internal to the Department and one examiner external to the Department.

Political Science (Thesis): Development Studies (M.A.) (45 credits)

Offered by: Political Science (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Development Studies Option (DSO) is a cross-disciplinary M.A. program offered within existing M.A. programs in the Departments of Geography, History, Political Science, Anthropology, Economics, and Sociology. It provides students with broad training in development studies. Students take an interdisciplinary seminar (INTD 657 Development Studies Seminar.) that is co-taught by professors from two different disciplines and a variety of graduate-level courses on international development issues. They write an M.A. thesis on a topic relating to development studies, approved by the DSO Coordinating Committee.

Candidates for the M.A. degree follow a program approved on an individual basis by the Department.

Political Science (Ph.D.)

Offered by: Political Science (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Political Science focuses on the following political science subfields: international relations, comparative politics, Canadian politics, and political theory. Broad training is provided in the discipline and specialization in two major fields of choice is required. Comprehensive exams in two fields are taken in the first and/or second year of study, in consultation with supervisors, field coordinators, and the Graduate Program Director.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

POLI 700	PhD Research Seminar.	0
POLI 701	Ph.D. General Written Examination First Field.	0
POLI 702	Ph.D. General Written Examination Second Field.	0
POLI 799	Ph.D. Oral Comprehensive Examination.	0

Complementary Courses (39 credits)

39 credits at the 500 or 600 level, chosen as follows:

Major Fields

12 credits chosen in first major field of which 3 credits must be the core course in the field.

9 credits chosen in second major field of which 3 credits must be the core course in the field.

Political Theory

3 credits in political theory at the 500 or 600 level.

Methods

3 credits from the following:

or another suitable Advanced Methods course.

Expand allContract all

Course	Title	Credits
POLI 612	Research Methods in Political Science.	3

Remaining Courses

12 credits of which at least 3 credits must be outside the student's major fields. For students that choose the advanced methods courses as part of the Advanced Research Tools, 6 of these 12 credits must be the advanced methods courses.

Advanced Research Tools

Language Requirement: Students must pass an advanced-level translation test from a language other than English. If the student's research will involve field work in a country where English is not widely spoken, the test will include an oral component. In selecting a language to fulfil this requirement, the student must demonstrate in writing how the chosen language is related to his or her research.

OR

Advanced Methods: To fulfil this requirement, students must complete 9 advanced methods credits (600 or 700 level) in qualitative and quantitative methods, selected in consultation with the student advisor, the Graduate program Director, and the methods coordinator. Students for whom Methods is one of their major fields will automatically fulfil the Advanced Research Tool requirement.

Political Science: Gender and Women's Studies (Ph.D.) (45 credits)

Offered by: Political Science (Faculty of Arts)

Degree: Doctor of Philosophy

Program credit weight: 45

Program Description

The Ph.D. in Political Science: Gender and Women's Studies focuses on gender and women studies of the foundation in political science theory and methods in the following political science subfields: international relations, comparative politics, Canadian politics, methods, and political theory. Broad training is provided in the discipline and specialization in two major fields of choice is required. Training in feminist research methods and theories is required. Comprehensive exams in two fields are taken in the first and/or second year of study, in consultation with supervisors, field coordinators, and the Graduate Program Director. Participation in a research symposium that brings together gender studies' researchers from across disciplines is mandatory.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend

the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Remaining Courses

3 credits which may be outside the student's major fields. For students that choose the advanced methods courses as part of the Advanced Research Tools, 3 credits must be the advanced methods courses.

Advanced Research Tools

Language Requirement: Students must pass an advanced-level translation test from a language other than English. If the student's research will involve field work in a country where English is not widely spoken, the test will include an oral component. In selecting a language

to fulfil this requirement, the student must demonstrate in writing how the chosen language is related to his or her research.

OR

Advanced Statistical Methods: To fulfil this requirement, students must complete 3 advanced methods credits (at the 600, or 700 level) in qualitative or quantitative methods, selected in consultation with the student advisor, the Graduate Program Director, and the methods coordinator. Students for whom Methods is one of their major fields will automatically fulfil the Advance Research Tool requirement.

Psychology (Thesis) (M.A.) (45 credits)

Offered by: Psychology (Faculty of Science)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Psychology focuses on research in the field of psychology, culminating in the submission of a thesis. The program emphasizes the skills in critical reading, data collection, and scientific communication. This program typically takes 2 years to complete.

Psychology (Ph.D.)

Offered by: Psychology (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

All candidates for the Ph.D. degree must demonstrate broad scholarship, mastery of current theoretical issues in psychology and their historical development, and a detailed knowledge of their special field. Great emphasis is placed on the development of research skills, and the dissertation forms the major part of the evaluation at the Ph.D. level.

Ph.D. students in Clinical Psychology must fulfil similar requirements to Ph.D. students in the Experimental Program and must also take a

variety of specialized courses, which include practicum and internship experiences.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Psychology: Behavioural Neuroscience (Ph.D.)

Offered by: Psychology (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Psychology; Behavioural Neuroscience program emphasizes modern, advanced theory and methodology aimed at the neurobiological underpinnings of behaviour in human and non-human animals. This program is intended for graduate students in any area of Psychology who wish to obtain unique, intensive training at the intersection of psychology and neuroscience, thereby enhancing their expertise; the interdisciplinary potential of their dissertation research, and enabling them to compete successfully for academic or commercial positions in either field alone, or their intersection. It requires that students complete a dissertation that addresses Behavioural Neuroscience themes as determined by the graduate program director.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Public Policy (Non-Thesis) (M.P.P.) (45 credits)

Offered by: School of Public Policy (Faculty of Arts)

Degree: MPP

Program credit weight: 45

Program Description

The Max Bell School of Public Policy's teaching program is a one-year Master of Public Policy; Non-Thesis, with a small student cohort to optimize learning and exchange. Combining courses in the theory of public policy with those covering the complexities of the real-world policy process, the program approaches today's most important policy issues in Canada and around the world from varied perspectives to prepare the next generation of policy leaders. The MPP program aims to place more emphasis than is usual in such programs on developing practical skills crucial to future policy leaders, including conflict resolution, persuasive writing, effective presentations and the briefing of officials.

The Master of Public Policy; Non-Thesis, is directed at early career professionals, normally with two to five years' professional experience, who are interested in developing expertise in the field of public policy. Recent graduates with an exceptional academic record will also be considered. A Bachelor's degree (or equivalent as recognized by McGill University) is required. The ideal applicant will have completed undergraduate courses in Political Science, Economics, Quantitative Methods, and/or Statistics.

Religious Studies (Non-Thesis) (S.T.M.) (45 credits)

Offered by: Religious Studies (Faculty of Arts)

Degree: Master of Sacred Theology

Program credit weight: 45

Program Description

The Master of Sacred Theology (S.T.M.); Non-Thesis is a course-based program that emphasizes intensive and scholarly learning opportunities. The program focuses on skills in literature review, information synthesis, and resourceful thinking. The program is approved by the Association of Theological Schools in the U.S. and Canada.

ATS Accreditation:

The S.T.M. program is fully accredited by the Association of Theological Schools in the U.S. and Canada.

The normal requirement is two years (of two terms each) of full-time study, but the degree may, by permission, be taken on a part-time basis.

Note: Ordination requirements for S.T.M. graduates will normally involve a further year of professional pastoral studies (the In-Ministry Year) provided by the Montreal School of Theology, which is affiliated with the School of Religious Studies.

Related courses, at the 500 level or higher, are also available in other departments and must be chosen in consultation with the S.T.M.; Non-Thesis adviser.

Religious Studies (Ph.D.)

Offered by: Religious Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Religious Studies focuses on research engagement with a broad spectrum of critical research involving different interdisciplinary approaches, research and teaching in the various different religious traditions.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

Expand allContract all

Course	Title	Credits
RELG 701	Major Comprehensive Examination.	0
RELG 702	Minor Comprehensive Examination.	0
RELG 703	Oral Comprehensive Examination.	0

Candidates admitted to Ph.D. 1 take a minimum of six graduate seminars during their first year and four seminars during their Ph.D. 2 year; those admitted to Ph.D. 2 must take a minimum of four graduate seminars. If possible, two seminars should be in their area of specialization, and at least one should be at the 700 level.

Language Requirements

Students are required to give their area committee evidence of reading knowledge of two languages other than English. These languages must be chosen from modern languages in which there is a significant amount of scholarship relevant to the student's area of research, or from classical languages relevant to the student's area of research.

Research in some disciplines, or on certain thesis topics, may require proficiency in more than two languages besides English. In that case, additional language requirements may be stipulated by the supervisor.

Doctoral Colloquium

As one of their requirements, all Ph.D. students in residence shall attend the monthly graduate colloquium, at which time a student's thesis project is formally presented and discussed. Each student is

required to present an aspect of his or her thesis research to a meeting of the Doktorklub before the thesis is submitted.

Religious Studies: Gender and Women's Studies (Ph.D.)

Offered by: Religious Studies (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Religious Studies; Gender and Women's Studies focuses on feminist, women's, and gender studies in relation to religious traditions.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Presentation to Doktorklub of student's thesis research.

Language Requirements

Modern and ancient languages as stipulated by field of study.

Couple and Family Therapy (Non-Thesis) (M.Sc.A.) (60 credits)

Offered by: Social Work (Faculty of Arts)

Degree: Master of Science Applied

Program credit weight: 60

Program Description

This master's-level clinical program (non-thesis) emphasizes clinical understanding and training in couple and family therapy applicable to multidisciplinary clinical professionals in which family systems and related theories can inform clinical practice. The general objectives of the program are to train clinical professionals in couple and family psychotherapy by integrating contemporary theory, research competence and varied approaches to therapy in the understanding and treatment of families today. It will produce graduates with competencies in the assessment and treatment of families across the life cycle with skills that can be applied to specialized psychotherapy practice in health and community settings. Program graduates will fulfil the requirements for both the Couple and Family Therapy permit (OTSTCFQ) and the Psychotherapy permit (OPQ).

Social Work (Thesis) (M.S.W.) (45 credits)

Offered by: Social Work (Faculty of Arts)

Degree: Master of Social Work

Program credit weight: 45

Program Description

The School of Social Work at McGill University prepares graduates for careers and leadership in the fields of social work and social welfare. In the M.S.W. program, students develop an understanding of a broad range of theories which inform practice, policy, and research. Envisioned as an opportunity to advance knowledge and skills, students are encouraged to immerse themselves in an area of scholarship and practice related to "Children and Families," "Social Care and Health Studies," and "Community and International Development." In addition, students investigate a subject matter of their choice in one of these broad areas of study through an independent study project or a master's thesis. Through the M.S.W. program, students develop critical and innovative approaches to practice competence and to policy analysis such that they may contribute to both established social services and to new and less developed areas of service provision.

Social Work (Thesis): Gender and Women's Studies (M.S.W.) (45 credits)

Offered by: Social Work (Faculty of Arts)

Degree: Master of Social Work

Program credit weight: 45

Program Description

The School of Social Work's M.S.W. Thesis – Gender and Women's Studies option is designed for students who have strong research interests and are particularly attracted to feminist theories and research methodologies. This program supports the development of advanced intellectual understanding and specialized research skills centered on gender, sexuality, feminism, and women in relation to "Children and Families," "Social Care and Health Studies," and "Community and International Development."

The thesis must be related to Gender and Women's Studies. The M.S.W. Thesis program includes graduate-level coursework and a research thesis. Students work closely with a Faculty supervisor. There is no field placement in the M.S.W. Thesis – Gender and Women's Studies program.

Elective Courses (28 credits)

Students must take 28 other elective courses offered within the Faculty or approved as credit equivalencies in order to complete the 132-credit degree requirement.

Minimum Writing Requirement

All students are required to submit at least one research paper. This requirement may be satisfied by:

1. writing an essay in a course in which the essay constitutes no less than 75% of the final grade;
2. writing a term essay under independent supervision, for credit, within the Faculty of Law;
3. writing an article, note, or comment of equivalent substance that is published or accepted for publication in the McGill Law Journal and approved by the Faculty Advisor to that publication.

Papers written jointly do not satisfy this requirement.

Social Work: McGill/UdeM/UQAM (Ph.D.)

Offered by: Social Work (Faculty of Arts)

Degree: Doctor of Philosophy

Sociology (Non-Thesis): Population Dynamics (M.A.) (45 credits)

Offered by: Sociology (Faculty of Arts)

Degree: Master of Arts

Program credit weight: 45

Program Description

The Population Dynamics Option (PDO) is open to Masters (non-thesis) students in Sociology specializing in Population Dynamics. The purpose of this program is to provide graduate training in demographic methods (including life table analyses) and enhance students' knowledge of critical population issues. As such, students will be required to take a course on demographic methods and an overview

substantive course on the key population issues facing societies today. In addition, students will take one complementary course in Sociology; Economics; or Epidemiology, Biostatistics, and Occupational Health, which focusses on a particular population issue such as population health, migration, aging, family dynamics, and labour markets and skills acquisition. Students will attend at least five of the seminars given in the Social Statistics and Population Dynamics Seminar series. Research projects must be on a topic relating to population dynamics, approved by the PDO coordinating committee.

Sociology (Ph.D.)

Offered by: Sociology (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Sociology is a professional degree program designed to prepare students for careers in academia as well as research and policy positions in both the public and private sectors. The program focuses on quantitative and qualitative methodology and sub-fields within the discipline. The dissertation should represent a unique contribution to the discipline and to the sub-field. The Ph.D. in Sociology is a professional degree program designed to prepare students for careers in academia as well as research and policy positions in both the public and private sectors. The program focuses on quantitative and qualitative methodology and sub-fields within the discipline. The dissertation should represent a unique contribution to the discipline and to the sub-field.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses

A minimum of three years of study is required.

Sociology: Gender and Women's Studies (Ph.D.)

Offered by: Sociology (Faculty of Arts)

Degree: Doctor of Philosophy

Program Description

The Ph.D in Sociology; Gender and Women's Studies focuses on an interdisciplinary specialization in feminist, women's, and gender studies. The Ph.D. dissertation must be on a topic that significantly engages with issues of gender and/or women and/or feminism.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (6 credits)

A minimum of three years of study is required.

Ph.D. candidates must take a comprehensive examination in two subfields within sociology by August of their Ph.D. 3 year. These fields will be chosen from the Department's areas of specialization.

Ph.D. candidates are required to submit a thesis on an approved topic. The topic must be approved by a dissertation proposal committee convened by the student's dissertation supervisor. The thesis should be completed within five years after the initial residency period of two to three years. Further details on the requirements and regulations for the thesis and the fields in which the Department is prepared to direct research may be obtained from the Sociology website at: <http://www.mcgill.ca/sociology/faculty> and at <http://www.mcgill.ca/gps/thesis>.

Dental Sciences (Thesis) (M.Sc.) (45 credits)

Offered by: Dental Med & Oral Health Sci (Faculty of Dental Medicine and Oral Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science (M.Sc.) in Dental Sciences program focuses on diverse research areas, including biomaterials, mineralized tissues, nanobiotechnology, tissue engineering, pain, epidemiology, public health, Indigenous health, oral health research, dental education, and knowledge translation.

Oral Health Sciences (Ph.D.)

Offered by: Dental Med & Oral Health Sci (Faculty of Dental Medicine and Oral Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Oral Health Sciences provides training for health science researchers in advanced research in oral health problems. It will build upon an approach to scholarly knowledge that embraces discipline

specific training in tandem with an understanding on one's position in research and possibilities for collaboration.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Note: Courses at the 500 level or higher in other departments can be chosen in consultation with their supervisors and the program director.

Oral Medicine (Gr. Dip.) (30 credits)

Offered by: Dental Medicine and Oral Health Sciences (Faculty of Dental Medicine and Oral Health Sciences)

Program credit weight: 30

Program Description

The Graduate Diploma in Oral Medicine provides specialty education of clinical practice supported by the appropriate foundations of knowledge and teaching. Training includes diagnosis and management of oral mucosal diseases, temporal mandibular joint disorders (TMD) and orofacial pain and other neurosensory disorders, oral manifestations of systemic disease, non-surgical salivary gland disorders, and oral/dental management of complex, medically compromised patients. Successful completion of this three-year program leads to eligibility to sit the Royal College of Dentists (Canada) Fellowship and specialty exam.

Counselling Psychology (Non-Thesis) (M.A.): Project (60 credits)

Offered by: Educational & Counselling Psych (Faculty of Education)

Degree: Master of Arts

Program credit weight: 60

Program Description

This program is designed to produce graduates with introductory academic preparation for research or clinical careers in counselling psychology. Training is provided in the research domain through

coursework in data analysis and a research project. Clinical preparation is initiated in the program through coursework in ethics, intervention, assessment, psychological testing, and multicultural issues and through a practicum. Most coursework is taken during the student's first year of studies while beginning work on their research projects. In their second year, students gain practical experience via a practicum in the Department's Psychoeducational and Counselling Clinic while also completing the majority of their work on the research project. The degree alone **does not** fulfil the requirements for membership in the Ordre des psychologues du Québec (OPQ).

Counselling Psychology (Ph.D.)

Offered by: Educational & Counselling Psych (Faculty of Education)

Degree: Doctor of Philosophy

Program Description

Students pursuing a Ph.D. in Counselling Psychology take a combination of theoretical, practical, and research-based courses

throughout the duration of their degree. The program draws upon a number of different sciences (including developmental, social, career and neuropsychology and personality theory) to develop critically astute researchers and exceptionally skilled clinicians. Building on the M.A. in Counselling Psychology (Project concentration), or equivalent, the program offers opportunities in Practicum, Supervision, and full-year Internships to develop clinical skills while also working toward the completion of a doctoral dissertation (thesis). The Ph.D. program, aims to:

1. Contribute to the advancement of knowledge in the field of counselling psychology
2. Practice from strong evidence base
3. Take a leadership role in community, professional, and university organizations in counselling psychology

Graduates of the program will be prepared to assume careers in education and community settings, including faculty positions, counselling and psychological positions on the staff of university and college mental health centres, and professional positions in psychological agencies offering preventative mental health services. The program is currently accredited by the Canadian Psychological Association (CPA), and the *Ordre des psychologues du Québec* (OPQ) (Please note that the APA no longer accredits programs outside of the United States of America). Graduates are eligible for licensure in Quebec.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

School/Applied Child Psychology (Non-Thesis) (M.A.) (60 credits)

Offered by: Educational & Counselling Psych (Faculty of Education)

Degree: Master of Arts

Program credit weight: 60

Program Description

The MA in School/Applied Child Psychology (SACP) is a research-based, non-thesis degree that requires completion of a research project per program guidelines. SACP at McGill prepares the next generation of school psychologists to provide state of the art educational and mental health services to children and adolescents from birth to 21 years old. Coursework, clinical experiences, field and community service, and research activities are designed to enhance and develop the professional skills and the knowledge base of our students. In McGill's scientist-practitioner training model, research supports and improves our clinical activities; and clinical activities support and inspire our research. McGill's School/Applied Child Psychology faculty and students are among the most productive research units in North America. Professional school psychologists educated at McGill become leaders in research and higher education, school-based practice, hospital-based positions, independent practice, mental health centres, and policy-making roles.

Typically, students entering the M.A. program choose to apply to the Ph.D. in School/Applied Child Psychology program which builds upon the foundation gained in the M.A. degree. Upon completion of the M.A. and Ph.D. programs, students are eligible for licensure as Psychologists with the Ordre des psychologues du Quebec (OPQ).

One year full time or two years half-time

Course	Title	Credits
EDPE 725	Internship 1 - School Psychology.	12
EDPE 726	Internship 2 - School Psychology.	12

Students are not required to demonstrate knowledge of a second language within this program; however, any student wishing to be licensed as a professional psychologist in Quebec must have a working

knowledge of French. Accreditation status may be confirmed by contacting the accrediting bodies.

Professional Accreditation

All elements of this Post-doctoral Graduate Diploma are selected from the professional components of the Ph.D. in School/Applied Child Psychology, which is accredited in the School Psychology category by the American Psychological Association (APA). Graduates of a respecialization program are normally accorded the same recognition as graduates of the accredited program.

The Ph.D. is approved by the Ordre des psychologues du Québec (OPQ), which has recommended the final stage of professional recognition to the Office des professions of the Government of Quebec. Once this accreditation is confirmed, however, graduates of the Post-doctoral Graduate Diploma will not be automatically eligible for membership in the OPQ and the right to practise professional psychology in Quebec. Candidates wishing to practise in Quebec will be required to apply to the OPQ for the recognition of equivalent qualifications.

Educational Psychology (Non-Thesis) (M.Ed.): Learning Sciences (48 credits)

Offered by: Educational & Counselling Psych (Faculty of Education)

Degree: Master of Education

Program credit weight: 48

Program Description

The M.Ed. in Educational Psychology; Non-Thesis - Learning Sciences focuses on the study of applied methods and data science and on teaching and learning in formal and informal contexts, including cognitive, social, and affective processes. Application in methods and data science include data mining and machine learning. Application in instructional design includes the use of technology, program/curriculum development and evaluation. The program includes two streams: Applied Methods and Data Science, and Science of Learning and Instruction.

Educational Psychology (Ph.D.): Human Development

Offered by: Educational & Counselling Psych (Faculty of Education)

Degree: Doctor of Philosophy

Program Description

The Ph.D. Educational Psychology: Human Development focuses on core areas of human development such as cognitive, language, social, personality, and gender development among children and adolescents with diverse trajectories and from various family, educational and community contexts. The program is unique in examining developmental trajectories from a variety of interdisciplinary perspectives. The student's dissertation should focus on an issue in the field of human development related to educational psychology.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (9 credits)

Counselling Applied to Teaching (Gr. Cert.) (15 credits)

Offered by: Educational & Counselling Psych (Faculty of Education)

Program credit weight: 15

Program Description

The goal of this program is to enhance teachers' knowledge and skills in interpersonal relations, communication, interviewing, group organization and leadership, crisis intervention, and career thinking and planning. Each of these knowledge areas addresses the recognition of situations when it is appropriate to make a referral to a personal or career counsellor, psychologist, or other professional. The program addresses both elementary and secondary education.

This graduate certificate does not qualify graduates to practise professional counselling or psychology (e.g., conducting psychological assessments or psychotherapy), or to refer to themselves by the term Counsellor or Psychologist: these are legally reserved titles. Programs leading to licensing as Counsellor or Psychologist are presented under Educational and Counselling Psychology (Counselling Psychology and School/Applied Child Psychology) or Psychology (Clinical Psychology) in Graduate and Postdoctoral Studies.

Elective Courses (15 credits)

15 credits at the 500 level or higher. An elective course can be any course in DISE. If the course is outside of the department, the student should consult with the Program Director or Coordinator prior to registering for the course. A maximum of 6 credits, at the 500 level or higher, may be taken outside of the Department, selected in consultation with the approval of Program Coordinator or Director, and Department Chair.

Education and Society (Non-Thesis) (M.A.): Course Work Math & Science Education (45 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Education and Society; Non-Thesis-Course Work

- Mathematics and Science Education program emphasizes a pedagogical understanding of mathematics and science education, including a specific focus on teacher education in the areas of mathematics and science. The program will include targeted opportunities for candidates to develop skills, knowledge and practices specific to teaching and learning mathematics and science, mathematics and science teacher preparation, and research in both of these areas. It will produce graduates who view improving mathematics and science education from a teaching and learning perspective, have developed understanding of research in mathematics and science education, and sufficient teacher education experience to assume roles as educational leaders in informal and formal settings.

15 credits at the 500 level or higher. An elective course can be any course in the Department. If the course is outside of the department, the student should consult with the Program Director or Coordinator prior to registering for the course. A maximum of 9 credits, at the 500 level or higher, may be taken outside of the Department.

Education and Society (Non-Thesis) (M.A.): Gender and Women's Studies (45 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. non-thesis project option - Gender and Women's Studies is an interdisciplinary program for students who meet the degree requirements in a participating unit and wish to earn 6 credits of approved coursework focusing on gender and women's studies, and issues in feminist research and methods. The non-thesis project option consists mainly of coursework, and includes two 6 credit projects. This option is suitable for practitioners interested in professional development with a research and theoretical orientation. The project must be on a topic centrally relating to issues of gender and/or women's studies.

Education and Society (Non-Thesis) (M.A.): Jewish Education (45 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Master of Arts

Program credit weight: 45

Program Description

This program is designed to offer a graduate-level point of entry into the teaching profession for students who typically will have completed a B.A. with minor or major in Jewish Studies. The M.A. will not provide Quebec Government teacher certification (in Quebec, certification is at the B.Ed. level), but at the present time, Jewish schools may hire non-certified teachers of Jewish Studies at their discretion.

Students interested in doing a research-focused M.A. in the area of Jewish Education should follow one of the other graduate degree offerings within the area of Education and Society.

Teaching and Learning (Non-Thesis) (M.A.): English or French Second Language (60 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Master of Arts

Program credit weight: 60

Program Description

The Master of Arts in Teaching and Learning; Non-Thesis - English or French Second Language Option is a graduate-level teacher education program. The program includes a minimum of 700 hours of school-based internships at the elementary and secondary levels, and offers two streams: an Independent Research Stream and a Course-Based Stream. The program's core academic components emphasize a comprehensive understanding of educational foundations, principles, theories, and practices and include a specific emphasis on English or French second language education. Upon successful completion of the program, graduates are recommended to the Québec Ministry of Education for teacher certification at the elementary and secondary school levels.

Educational Studies (Ph.D.)

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Doctor of Philosophy

Program Description

Students must satisfy all program requirements of the Ph.D.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (8 credits)

Course	Title	Credits
EDEC 630	Ethnographic Approaches to Research.	3
EDEC 706	Textual Approaches to Research.	3
EDEC 707	Interpretive Inquiry.	3
EDEM 692	Qualitative Research Methods.	3

Elective Courses (3-12 credits)

Elective courses required in the student's Ph.D. plan of study will be determined in consultation with the Doctoral Advisory Committee depending on the student's background and research interests.

Students must take a minimum of 3 credits of elective courses.

Students admitted to Ph.D. 2 will normally take up to 12 credits of elective courses under the advice of their Doctoral Advisory Committee.

Students admitted to Ph.D. 1 without an M.A. may be advised by their Doctoral Advisory Committee to take more than 12 credits of elective courses depending on their background. If admitted to the program without at least 6 credits of M.A.-level research methods and/or Statistics courses, candidates may be expected to take such courses during their first year of study as advised.

These may be selected from current offerings of research methods courses either within or outside the Department, such as:

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Doctor of Philosophy

Program Description

Students must satisfy all program requirements for the Ph.D. in Educational Studies. The Ph.D. thesis must be on a topic relating to language acquisition.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate

ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Educational Studies (Ph.D.): Mathematics and Science Education

Offered by: Integrated Studies in Ed (Faculty of Education)

Degree: Doctor of Philosophy

Program Description

This Ph.D. concentration emphasizes research in mathematics and science education, including a specific focus on teacher education in the area of math and science. Graduates will gain sufficient research experience to conduct empirical research in math and science education and sufficient teacher education experience to assume roles as teacher educators in university or other settings. The program includes targeted opportunities for candidates to develop skills, knowledge, and practices specific to teaching and learning mathematics and science, mathematics and science teacher preparation, and research in both of these areas. Applicants for the Ph.D. concentration in mathematics and science education would be expected to already have a Master's degree that included educational research.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Depending on the student's prior coursework and in consultation with the Supervisor and/or Doctoral Advisory Committee, an additional 0-9 credits of elective courses at the 500 level or higher may be required.

Educational Leadership 1 (Gr. Cert.) (15 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Program credit weight: 15

Program Description

This 15-credit program addresses the needs of experienced and aspiring school leaders who are taking increased responsibility for the students and communities they serve. The management of schools is increasingly seen as making a major contribution to the learning and personal development of students. The professional development of school leaders, educational reform, and school partnership form the basis for the program.

Educational Leadership 2 (Gr. Cert.) (15 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Program credit weight: 15

Program Description

This 15-credit program explores more deeply leadership theory and educational issues and applications in a practicum. Candidates for the Graduate Certificate in Educational Leadership 2 should normally have completed the first certificate. In combination, the two certificates allow school administrators to acquire the 30 graduate credits in the field of educational leadership required by the Quebec Ministry of Education.

Educational Leadership 3 (Gr. Cert.) (15 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Program credit weight: 15

Program Description

The Graduate Certificate in Educational Leadership 3 emphasizes applied research in educational leadership and ways in which educational leadership and associated theories can inform the design, implementation, and assessment of educational programs in schools. The program highlights applied research in the context of teaching and learning in Quebec elementary and secondary schools. No course taken in the Graduate Certificate in Educational Leadership 1 may be repeated in Graduate Certificate in Educational Leadership 2 or Graduate Certificate in Educational Leadership 3. The Graduate Certificate in Educational Leadership 3 may be offered on campus or online.

International Leadership in Educational and Administrative Development (Gr. Cert.) (15 credits)

Offered by: Dean's Office (Faculty of Education)

Program credit weight: 15

Program Description

** This program is currently not offered. **

The Graduate Certificate in International Leadership in Educational and Administrative Development (I-LEAD) targets leaders, consultants, senior management, administrators, and policy makers from a range of educational institutions (universities, colleges, private schools), organizations (hospitals, community, governmental), and the corporate sector. The varied curriculum provide a world-class global training experience in educational leadership. The majority of courses are delivered online asynchronously, with students accessing learning material and engaging in online discussions. Courses are offered online during the fall, winter, and spring semesters, and also include an intensive summer component on the McGill campus.

Teaching English as a Second Language (Gr. Cert.) (15 credits)

Offered by: Integrated Studies in Ed (Faculty of Education)

Program credit weight: 15

Program Description

This 15-credit certificate is designed as professional development for in-service teachers and candidates with a background in education, language studies, linguistics, or a related field, or as preparation for application to our M.A. in Second Language Education. The five courses that comprise the certificate provide a solid background and offer in-depth study in the field of second-language education from a range of perspectives and with a focus on research and applications to teaching. Please note that this certificate does not lead to teacher certification.

The Graduate Certificate in TESL is designed to be available to students worldwide. Courses are offered in a combination of online and face-to-face formats, and sequenced in such a way that students can complete the certificate in one year. The maximum time for completion is five years. The first three courses are offered online, and can be undertaken anywhere an Internet connection is available. The final two courses are offered face-to-face either on-site at McGill or at off-site locations with collaborative partners, if numbers warrant.

Please click here for information on additional requirements for students pursuing this online program:

Pédagogie de l'immersion française (Cert.ed.sup.) (15 credits)

Offered by: Integrated Studies in Ed
Program credit weight: 15

Program Description

This program is currently not offered.

Le Certificat d'études supérieures en pédagogie de l'immersion française (PIF) outille les enseignant.e.s du primaire et du secondaire afin de répondre aux défis pédagogiques liés à l'enseignement dans la classe d'immersion française en contexte canadien. Ce certificat d'études supérieures de 15 crédits offerts en ligne s'adresse aux enseignant.e.s détenant au préalable un brevet d'enseignement émis par une université reconnue. La réussite d'un test de français est obligatoire lors de la demande d'admission.

¹ Veuillez prendre note que deux cours complémentaires sont proposés sous forme d'atelier d'été en présentiel. Toutefois, ces cours ne sont pas requis pour satisfaire aux exigences du certificat d'études supérieures.

Architecture (Thesis) (M.Sc.) (45 credits)

Offered by: Architecture (Faculty of Engineering)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Architecture (Thesis) is a research-intensive program of study, focusing on critical skills in research, analysis, experimentation, design research, and interpretation that are applicable in the profession, allied disciplines, and society. The program accommodates several areas of study, capitalizing on faculty expertise. It offers flexibility between a written or design-oriented thesis, and promotes close interaction between students and faculty in sponsored and unsponsored research. Original research on architectural, engineering, landscape, and urban issues of interest with implications for the built environment are conducted to develop the student's research skills and competencies for doctoral studies or a leadership role in professional practice.

Architecture (Ph.D.)

Offered by: Architecture (Faculty of Engineering)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Architecture is a research degree with a thesis, the foundations for which are developed through a series of courses taken in the first two years of study. Each student meets regularly with the supervisor in the first year to prepare the thesis proposal (ARCH 700 Thesis Proposal.). Three Literature Review preparatory courses (ARCH 721 Literature Review 1., ARCH 722 Literature Review 2., ARCH 723 Literature Review 3.) and three (or more) complementary courses are taken in the first two years of study. All students also participate in the two Research Seminars (ARCH 711 Doctoral Proseminar 1., ARCH 712 Doctoral Proseminar 2.) to present the research framework and objectives for peer critique. By the end of the second year of studies (Ph.D.-3), the student must complete the

Comprehensive Examination (ARCH 701 Comprehensive Examination.) with a formal presentation to an Advisory Committee.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Chemical Engineering (Thesis) (M.Sc.) (45 credits)

Offered by: Chemical Engineering (Faculty of Engineering)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Chemical Engineering (Thesis) is a research-oriented program that focuses on advanced materials and polymers, biomedical engineering and biotechnology, environmental engineering, energy, plasma science and artificial intelligence-assisted design and optimization. This program offers advanced training in fundamentals as well as research methods, laboratory safety and research ethics and is, therefore, the more relevant program for those whose primary interest is research as well as a suitable preparation for a career in industry.

Chemical Engineering (Ph.D.)

Offered by: Chemical Engineering (Faculty of Engineering)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Chemical Engineering focuses on advanced materials and polymers, biomedical engineering and biotechnology, environmental engineering, energy, plasma science and artificial intelligence-assisted design and optimization. The program offers advanced training in fundamentals as well as research methods and techniques, laboratory safety and research ethics.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Civil Engineering (Thesis) (M.Sc.) (45 credits)

Offered by: Civil Engineering (Faculty of Engineering)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Civil Engineering focuses on structures and structural materials; infrastructure rehabilitation; risk engineering; fluid mechanics and hydraulics; materials engineering; soil behaviour; soil mechanics and foundations; water resources engineering; environmental engineering; and transportation engineering. A two- to

three-semester independent research project is undertaken in one of these fields, leading to a thesis.

Civil Engineering (Non-Thesis): Environmental Engineering (M.Eng.) (45 credits)

Offered by: Civil Engineering (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

The program consists of a minimum of 45 credits, of which, depending on the student's home department, a minimum of 5 and a maximum of 15 may be allotted to the research project. The balance of 30 to 40 credits is earned by coursework. The Department also allows students to complete the program using a minimum of 45 credits of coursework only.

The Environmental Engineering option is administered by the Faculty of Engineering. Further information may be obtained from the Program Coordinator, Department of Civil Engineering.

Research Project (0 or 5-15 credits)

The program may include a project or, with Departmental approval, may be completed with courses only.

CIVE 702	Ph.D. Research Proposal.	0

Complementary Courses

6-8 credits at the 500 or 600 level taken from the Department of Civil Engineering.

Electrical Engineering (Thesis) (M.Sc.) (45 credits)

Offered by: Electrical & Computer Engr (Faculty of Engineering)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Electrical Engineering (Thesis) is research oriented and the thesis is expected to involve a thorough examination of a topic of current interest in the research area within the Department. Undertaking this program at McGill University provides students with an opportunity to conduct intensive research under the supervision of researchers who are leaders in their field. The program is an ideal preparation for a Ph.D. degree or an industrial research career.

The M.Sc. Thesis program must be completed on a full-time basis in no more than three years. The following requirements must be met.

Thesis Courses (27 credits)

Expand allContract all

Course	Title	Credits
ECSE 691	Thesis Research 1.	3
ECSE 692	Thesis Research 2.	4
ECSE 693	Thesis Research 3.	4

ECSE 695	Thesis Research 5.	4
ECSE 696	Thesis Research 6.	4
ECSE 697	Thesis Research 7.	4

Students who choose the thesis option must register for all 27 credits during the three terms of residency.

Complementary Courses (18 credits)

18 credits of 500-, 600-, or 700-level courses, of which no more than 6 credits may be outside the Department.

- 1 Non-departmental courses require Departmental approval. Students may be allowed to take more than 6 credits of non-Departmental courses; a letter of recommendation from their supervisor outlining the reason for such an action is required.

Electrical Engineering (Non-Thesis) (M.Eng.) (45 credits)

Offered by: Electrical & Computer Engr (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

The Master of Engineering in Electrical Engineering; Non-Thesis program is a professional course-based program of 45 credits. The program provides a solid background in electrical and computer engineering, both in terms of breadth across the entire field and depth in the area of specialty. The program structure allows students to complete the program in three semesters. A part-time program is possible.

Complementary Courses (45 credits)

Full-time students must complete the program in three years.

45 credits of 500- or 600- courses, of which no more than 16 credits may be outside the Department. Students may not take Thesis Research courses - ECSE 691 to ECSE 697.

* Non-departmental courses require Departmental Approval. In exceptional circumstances and with proper justification, students may be permitted to take more than 16 credits of non-Departmental courses; approval from the Graduate Program Director or delegate is required.

Electrical Engineering (Ph.D.)

Complementary Courses (16 credits)

A minimum of 16 credits (500, 600, or 700 level) from the Faculty of Engineering may be selected by the student, based on interest and the choice of area of concentration. Courses at the graduate level from other faculties may also be taken, with prior approval from the student's project supervisor and the Graduate Program Director. A maximum of 3 credits of FACC courses at the 500, 600, or 700 level may be credited toward the degree.

Aerospace Engineering (Non-Thesis) (M.Eng.) (45 credits)

Offered by: Mechanical Engineering (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

The M.Eng. Aerospace Degree is offered to the students who wish to specialize in the general area of aerospace engineering. This degree is given in conjunction with Concordia University, Polytechnique de Montréal, Université Laval, Université de Sherbrooke, and École de Technologie Supérieure. Students registered at McGill are required to take two courses from two other institutions.

Depending on their background, students would specialize in one of the three areas:

1. Aeronautics and Space Engineering
2. Avionics and Control
3. Aerospace Materials and Structures

Required Courses (9 credits)

Expand allContract all

Course	Title	Credits
MECH 687	Aerospace Case Studies.	3
MECH 688	Industrial Stage.	6

Complementary Courses (36 credits)

The other courses, depending on the area of concentration, will be chosen in consultation with an Aerospace Engineering Adviser. A maximum of 3 credits of FACC courses at the 500, 600, or 700 level may be credited toward the degree.

Mechanical Engineering (Ph.D.)

Offered by: Mechanical Engineering (Faculty of Engineering)

Degree: Doctor of Philosophy

Program Description

Candidates normally register for the M.Eng. degree in the first instance. However, in exceptional cases where the research work is proceeding very satisfactorily, or where the equivalent of the M.Eng. degree has been completed at another university, candidates may be permitted to proceed directly to the Ph.D. degree without submitting a master's thesis as long as they have satisfied the course requirements for the M.Eng. degree.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Materials Engineering (Thesis) (M.Sc.) (45 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Materials Engineering (Thesis) is a research-oriented program that focuses on research skills and knowledge of materials engineering through coursework and a research thesis under the supervision of a Faculty member (professor). Emphasis is placed on research methods, as well as fundamentals. As such, the program is the more suitable option for those whose primary interest is research. The M.Sc. (Thesis) is for candidates with a Bachelor's degree in Engineering or from a discipline relevant to materials engineering.

Program credit weight: 45

Program Description

The M.Sc. in Mining Engineering focuses on both fundamental and applied research. A two- to three-semester independent research project, leading to a thesis, is undertaken in any research area of mining science, engineering or technology, as well as closely related fields.

Materials Engineering (Non-Thesis) (M.Eng.) (45 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

The Master of Engineering in Materials Engineering: Non-Thesis program is primarily designed to train people with appropriate engineering or scientific background to allow them to work effectively in the materials industries.

Materials Engineering (Non-Thesis): Environmental Engineering (M.Eng.) (45 credits)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

This interdepartmental graduate option leads to a Master of Engineering (M.Eng.) Materials Engineering: Non-Thesis-Environmental Engineering. The objective of the option is to train environmental professionals at an advanced level. The program is designed for individuals with an undergraduate degree in engineering. The Environmental Engineering option emphasizes interdisciplinary fundamental knowledge, practical perspectives, and awareness of environmental issues through a wide range of technical and non-technical courses offered by collaborating departments and faculties at the University. Students are strongly encouraged to consult with the Graduate Program Director prior to enrolling in the program.

Materials Engineering (Ph.D.)

Offered by: Mining & Materials Engineering (Faculty of Engineering)

Degree: Doctor of Philosophy

Program Description

Candidates for this degree must complete a minimum of two lecture courses assigned by the Department, selected on the basis of previous academic training and research interests. Candidates must also pass a safety training course, participate in an appropriate Research Seminar course and, take a preliminary examination within their first year of Ph.D. study.

academic training and research interests. Candidates must also pass a safety training course, participate in an appropriate Research Seminar course, and take a preliminary examination within their first year of Ph.D. study.

The candidate must submit an acceptable thesis based upon successfully completed research and must satisfy the examiners in an oral examination of the thesis.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Sustainability in Engineering and Design (Non-Thesis) (M.Eng.) (45 credits)

Offered by: Trottier Inst Sust,Eng&Design (Faculty of Engineering)

Degree: Master of Engineering

Program credit weight: 45

Program Description

The Master of Engineering in Sustainability in Engineering and Design; Non-Thesis, focuses on the critical sustainability challenges of the 21st century. The program provides students with the opportunity to

apply systems-based frameworks and sustainability metrics to analyze problems and design solutions for sustainability in engineering and design. It provides an interdisciplinary working environment for those working on sustainability.

Required Courses (27 credits)

Urban Planning, Policy and Design (Thesis) (M.Sc.) (45 credits)

Offered by: Urban Planning (Faculty of Engineering)**Degree:** Master of Science**Program credit weight:** 45

Program Description

The M.Sc. in Urban Planning, Policy and Design (Thesis) is centred on an independent research thesis. Original research on an urban issue of interest with implications for planning, policy or design will be conducted. The program focuses on critical skills in research, analysis and interpretation that are applicable in both academia and practice.

Required Courses (27 credits)

Expand allContract all

Course	Title	Credits
URBP 606D1	Research Seminar.	3
URBP 606D2	Research Seminar.	3

URBP 646	Social Research Methods 2.	1
URBP 647	Selected Methods in Planning 1.	1
URBP 648	Selected Methods in Planning 2 .	1

Note: Students may also take research methods courses at the 500 or 600 level in other academic units at McGill or another Montreal university, subject to the approval of the School.

Elective Courses (6 credits)

6 credits offered at the 500 or 600 level by any academic units at McGill or at another Montreal university, with the approval of the School, if they are related to one or more subject areas in the field of planning. Choices usually include courses in urban geography, sociology, anthropology, law, politics, and environmental science. Students must confirm with the Thesis Supervisor prior to registration that the selected course(s) can be counted toward the M.Sc. program.

Urban Planning (Non-Thesis) (M.U.P.) (60 credits)

Offered by: Urban Planning (Faculty of Engineering)

Degree: Master of Urban Planning

Program credit weight: 60

Program Description

The M.U.P. requires two years of study and research including a three-month summer internship in a professional setting. Upon completion of the program, graduates are expected to have acquired basic planning skills, a broad understanding of urban issues, and specialized knowledge in a field of their own choice.

** Students interested in the Barbados Field Study semester option should contact the department on its availability **

Urban Planning (Non-Thesis): Urban Development and Urban Design (M.U.P.) (60 credits)

Offered by: Urban Planning (Faculty of Engineering)

Degree: Master of Urban Planning

Program credit weight: 60

Program Description

The concentration in Urban Development and Urban Design aims to produce graduates who are skilled in analysis and design for development in existing (sub)urban landscapes and urbanizing contexts, whether in North America or elsewhere. A series of courses on urban design, real estate, the politics of development, and urban governance enhance the core curriculum of the professionally-accredited M.U.P. program. Additional courses address innovative approaches to urban development, contemporary urban form, community-based design, globalization and development, and the adaptive redesign of suburban contexts, in addition to enduring topics such as housing, public space, cultural landscapes, and environmental planning. Students seeking to specialize in Urban Development and Urban Design apply at the end of their first year of study; admission into the concentration is based on performance in the first year of study and demonstration of spatial literacy, numeric competency, skills in graphic communication, and understanding of complex development processes.

Students may also take courses at the 500 or 600 level in any academic unit at McGill or at another Montreal university, subject to the approval of the School.

Urban Planning, Policy and Design (Ph.D.)

Offered by: Urban Planning (Faculty of Engineering)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy in Urban Planning, Policy and Design aims to prepare students for interdisciplinary research and teaching on the management of urban development as well as for leadership in the design and evaluation of urban policies and plans for cities in North America and the world. The program will focus on five identified areas of urban planning (land use planning and urban design; environmental planning; transportation planning; international development planning; real estate and economic development). Students are expected to spend the first two years of study taking courses, preparing for their comprehensive examination and writing their dissertation proposal. The remaining two (or more) years are spent conducting research and writing a thesis.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (9 credits)

Every student must take courses worth at least 18 credits. Only one reading course can be included in this minimum requirement. The Advisory Committee may raise the requirement up to 24 credits (up to 36 credits for students entering as Ph.D. 1) in order to meet the specific needs of the student. With approval of their committee, students may elect to take a larger number of courses than is required, but in no case will the number of credits exceed thirty unless the student enters the program in Ph.D.1.

Expand allContract all

Course	Title	Credits
URBP 612	History and Theory of Planning.	3
URBP 701	Doctoral Comprehensive Examination.	0
URBP 703	Doctoral Research Seminar 1.	3
URBP 704	Doctoral Research Seminar 2.	3
URBP 709	Doctoral Research Proposal.	0

Complementary Courses (6 credits)

3 credits in advanced research methods at the 600 level or higher. It may be taken in any academic unit at McGill or another university, subject to the approval of the Graduate Program or School Director.

3 credits in advanced theory at the 600 level or higher. It may be taken at McGill or at another university and must be approved by the Graduate Program or School Director.

Elective Courses (3 credits)

Minimum 3 credits at the 500 level or higher, or more if the Advisory Committee so decides.

These credits may be taken in any academic unit at McGill or at another university, subject to the approval of the Advisory Committee.

The Advisory Committee may require that the number of electives be increased to improve the student's preparation in certain areas. Other courses, at the 500 level or higher, may be added with the approval of the Advisory Committee. In general, students will be asked to limit their elective coursework to 9 credits. In no case will they be allowed to take more than 15 credits in elective courses.

Up to two reading courses may be taken and only one may be included in the minimum 18 credits of course work. A reading course is taken when no appropriate course is available and is (at least) equivalent to a 3-credit course in terms of work load. Procedures for reading courses are outlined in the Reading Course guidelines.

Biological and Biomedical Engineering (Thesis) (M.Sc.) (45 credits)

Offered by: Biological & Biomedical Engineering

Degree: Master of Science

Program credit weight: 45

Program Description

The Biological and Biomedical Engineering (BBME) Master's program focuses on the interdisciplinary application of methods, paradigms, technologies, and devices from engineering and the natural sciences to problems in biology, medicine, and the life sciences. With its unique multidisciplinary environment, and taking advantage of research collaborations between staff in the Faculties of Medicine, Science, and Engineering, BBME offers thesis-based graduate degrees (M.Sc.) that span broad themes in biomodelling, biosignal processing, medical imaging, nanotechnology, artificial cells and organs, probiotics, bioinformatics, bioengineering, biomaterials, and orthopaedics.

BBME's internationally renowned staff provide frequent and stimulating interactions with physicians, scientists, and the biomedical industry.

Through courses and thesis research, this program will prepare students for careers in industry, academia, hospitals and government and provide a solid basis for Ph.D. studies. Candidates should hold a bachelor's degree in engineering, science, or medicine with a strong emphasis on mathematics, physics, chemistry, and basic physiology or cell biology.

Biological and Biomedical Engineering (Ph.D.)

Offered by: Biological & Biomedical Engineering

Degree: Doctor of Philosophy

Program Description

The goal of the Biological and Biomedical Engineering Ph.D. program is for students to gain advanced training in the interdisciplinary application of methods, paradigms, technologies, and devices from engineering and the natural sciences to problems in biology, medicine, and the life sciences. The program will focus in an area of choice while integrating quantitative concepts and engineering tools for the study of life sciences and/or for patient care. As part of the Ph.D. requirement, the student will integrate the scientific method, develop critical and deep thinking, and acquire advanced writing and presentation skills that will form the foundation for his/her career. Under the guidance of his/her supervisor, the student will tackle a research challenge and make original contributions to the advancement of science and engineering in an area of Biological and Biomedical Engineering. The program will prepare students for careers in academia, industry, hospitals and government. Students who complete the program will obtain a Doctor of Philosophy in Biological and Biomedical Engineering. The best preparation for this program is a Master's degree in BBME or a related discipline.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show

familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Foundations in Health Sciences Education (Gr. Cert.) (15 credits)

Offered by: Fndtns in Health Sciences Educ (Faculty of Medicine and Health Sciences)

Program credit weight: 15

Program Description

The Graduate Certificate in Foundations in Health Sciences Education focuses on theoretical and evidence-based knowledge and practical skills in the areas of teaching and learning, curriculum and course design, assessment and evaluation, leadership, and scholarship as applied to health sciences education. Program content includes contemporary educational and psychological concepts, theories, and evidence-based practices relevant to specific contexts in which health and health science professionals practice, and the different educational roles they are likely to assume. The blended learning format includes face-to-face instruction, and synchronous and asynchronous online learning. The program includes project-based assignments that build on one another, provide opportunities to integrate courses, and explore their application to authentic personal contexts.

3 The degree will be awarded, at the earliest, after the completion of three years of residence. The core of the D.C.L. program is a substantial thesis of up to 400 pages that makes a significant contribution to legal scholarship, evidencing in concept and execution the original work of the candidate. The thesis must be submitted within 4 years of completion of the residency requirement. Every candidate must successfully pass a comprehensive examination, after one year which may occur in the first year of the program, but no later than the end of the second year of the program.

Air and Space Law (D.C.L.)

Offered by: Air and Space Law (Faculty of Law)

Degree: Doctor of Civil Law

Program Description

The Institute of Air & Space Law offers a D.C.L. program in Air and Space Law, which allows the development of substantive and original

4 contributions to legal research and knowledge under the supervision of a faculty member.

3 The degree will be awarded, at the earliest, after the completion of three years of residence. The core of the D.C.L. program is a substantial thesis of up to 400 pages that makes a significant contribution to legal scholarship, evidencing in concept and execution the original work of the candidate. The thesis must be submitted within 4 years of completion of the residency requirement. Every candidate must successfully pass a comprehensive examination, after one year which may occur in the first year of the program, but no later than the end of the second year of the program.

Air and Space Law (Gr. Cert.) (15 credits)

Offered by: Air and Space Law (Faculty of Law)

Program credit weight: 15

Program Description

The Graduate Certificate in Air and Space Law offered through the Institute of Air and Space Law is a coursework program, appropriate for students with a strong professional orientation.

The certificate is awarded after one term of residence in the Faculty and upon completion of 15 academic credits of graduate law courses. Students must take 9 credits of required Air and Space Law courses and the additional 6 credits may consist of any 500-level or higher law course or other courses offered through the Institute of Air and Space

Law. Exceptionally, and with the permission of the Associate Dean, Graduate Studies, the 15 credits may be taken over two terms.

For more information, see our website: <https://mcgill.ca/law/grad-studies/certificate-programs>.

Complementary Courses (6 credits)

6 additional credits of 500-level or higher law courses.

Comparative Law (Gr. Cert.) (15 credits)

Offered by: Comparative Law (Faculty of Law)

Program credit weight: 15

Program Description

This program is currently not offered.

The Graduate Certificate in Comparative Law is offered through the Institute of Comparative Law and provides advanced legal training over one term of full-time studies or two terms of part-time studies to candidates who wish to pursue graduate legal education for career-related purposes.

The certificate is awarded after one term of residence in the Faculty and upon completion of 15 credits. In every case, the program is structured to meet individual needs and must be approved by the Associate Dean (Graduate Studies).

For more information, see our website: <https://mcgill.ca/law/grad-studies/certificate-programs>.

Complementary Courses

Courses at the 500 level or higher are chosen on an individual basis.

Law (Non-Thesis) (LL.M.) (45 credits)

Offered by: Law (Faculty of Law)

Degree: Master of Laws

Program credit weight: 45

Program Description

The 45-credit LL.M. non-thesis option complements previous legal education through specialized graduate-level coursework and in-depth research. It enhances expertise in selected areas of legal scholarship and offers an opportunity to write a supervised, substantial, and publishable paper in an area of interest.

Candidates must remain in residence for three terms for which full-time fees will be charged. The third term is devoted to the Research Project, usually taken in the Summer of the first year. If the research project is not completed in this time, students must register for additional sessions as needed. All degree requirements must be completed within a maximum of three years of the date of first registration.

Research Project (15 credits)

The supervised research project is a 15,000-word paper, assessed by the supervisor on a pass-fail basis, and is typically completed in the Summer.

Law (Non-Thesis): Environment (LL.M.) (45 credits)

Offered by: Law (Faculty of Law)

Degree: Master of Laws

Program credit weight: 45

Program Description

This program is currently not offered.

The 45-credit, LL.M. program, non-thesis option, in Environment is offered in collaboration with the Bieler School of Environment. The program considers how various dimensions (scientific, social, legal, ethical) interact to define environment and sustainability issues. It complements previous legal education through specialized graduate-level coursework and in-depth research. The program focuses on selected areas of legal scholarship and includes a written, supervised, substantial, and publishable paper in a area of interest related to the environment.

Candidates must remain in residence for three terms for which full-time fees will be charged. The third term is devoted to the Research Project, usually taken in the Summer of the first year, meaning that students usually complete their program within one calendar year. If the research project is not completed in this time, students must register for additional sessions as needed. Law (Thesis) (LL.M.) (45 credits)

Offered by: Law (Faculty of Law)

Degree: Master of Laws

Program credit weight: 45

Program Description

The 45-credit LL.M. program, thesis option, is a research-intensive graduate program focused on developing research interests into a thesis project under the supervision of a faculty member. Graduate level courses on theoretical and methodological approaches to legal writing complement the research work and thesis completion process, and courses in specific areas of knowledge related to the candidate's research interests complete the program's credit requirements.

LL.M. candidates may be associated with the Centre for Human Rights and Legal Pluralism, the Quebec Research Centre of Private and Comparative Law, the Centre for Intellectual Property Policy, or one of the specialized Research Chairs at the Faculty of Law. For more information, see our Website: <https://mcgill.ca/law/grad-studies/masters-programs>.

Candidates must remain in residence for three terms for which full-time fees will be charged. The third term, usually devoted to thesis research, may be taken the Summer of the first year. If the thesis is not completed in this time, students must register for additional sessions as needed.

All degree requirements must be completed within a maximum of three years of the date of first registration.

Thesis Courses (30 credits)

As part of the course Master's Thesis 1, a thesis candidate must provide a protocol to his or her supervisor setting out details as to the thesis topic, the deadlines for the completion of the various thesis courses and the schedule of meetings with the thesis supervisor. Modifications to the protocol must be made in writing and submitted to the Associate Dean (Graduate Studies).

Law (Thesis): Bioethics (LL.M.) (45 credits)

Offered by: Law (Faculty of Law)

Degree: Master of Laws

Program credit weight: 45

Program Description

The 45-credit LL.M. program, thesis option, in Bioethics is a research-intensive, interdisciplinary, graduate program focused on developing research interests into a thesis project under the supervision of a faculty member. Graduate-level courses on theoretical and methodological approaches to legal writing complement the research work and thesis completion process, and courses in specific areas of knowledge related to the candidate's research interests complete the program's credit requirements.

Students following the Bioethics option come from the Faculties of Law, Medicine, Religious Studies, or the Department of Philosophy. Entering students pursuing an LL.M., Bioethics are bound by the requirements of the Faculty of Law's LL.M. program (thesis option). For further information regarding this program, please refer to the Bioethics section. See <https://www.mcgill.ca/biomedicaleticsunit/>.

Candidates must remain in residence for three terms for which full-time fees will be charged. The third term, usually devoted to thesis research, may be taken the Summer of the first year. If the thesis is not completed in this time, students must register for additional sessions as needed. All degree requirements must be completed within a maximum of three years of the date of first registration.

Thesis Courses (24 credits)

The Master's Thesis programs consist of a coursework component and a thesis of approximately 100 pages. As part of the thesis requirement, a candidate must provide a protocol to his or her supervisor setting out details as to the thesis topic, the deadlines for the completion of the various thesis courses and the schedule of meetings with the thesis supervisor. Modifications to the protocol must be made in writing and submitted to the Associate Dean (Graduate Studies).

Law: Comparative Law (D.C.L.)

Offered by: Law (Faculty of Law)

Degree: Doctor of Civil Law

Program Description

The Doctor of Civil Law (D.C.L.) program allows the development of substantive and original contributions to legal research and knowledge under the supervision of a faculty member.

The degree will be awarded, at the earliest, after the completion of 3 years of residence in the Faculty. The core of the D.C.L. program is a substantial thesis of up to 400 pages that makes a significant contribution to legal scholarship, evidencing in concept and execution the original work of the candidate. The thesis must be submitted within 4 years of completion of the residency requirement. Every candidate must successfully pass a comprehensive examination, after one year which may occur in the first year of the program, but no later than the end of the second year of the program.

Comprehensive - Required

Program credit weight: 54

Program Description

The MBA; Non-Thesis focuses on both hard and soft key management disciplines and skills in its required courses. Integration of the material in the required courses is accomplished with integration sessions midway through the first semester and at its end. The program is structured in such a way so as to allow for completion of the program in 16-20 months. There is maximum flexibility in the selection of electives taken, ranging from a customized set of electives reflecting the student's own interests, to completing a specialization, i.e., taking a set of at least five electives chosen from lists of specializations (e.g. finance, strategy) compiled by the Program office based on input from Faculty Areas. Students can choose between doing an Internship, completing a Practicum or applying to do an exchange semester at a foreign university.

Management (Non-Thesis): General Management & Law (Joint M.B.A. & B.C.L./J.D.) (132 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Master of Business Admin

Program credit weight: 132

Program Description

A joint M.B.A.; Non-Thesis - General Management and B.C.L./J.D. program is offered by the Desautels Faculty of Management and the Faculty of Law. This joint program provides students the opportunity to pursue legal and administrative aspects of business. Successful candidates graduate with M.B.A., B.C.L., and J.D. degrees, a trio that prepares them for careers in private and public enterprise, as well as government service.

Students complete 39 credits for the M.B.A. and 93 credits for the integrated B.C.L./J.D., for a total of 132 credits.

Elective Courses (34 credits)

Students must take 34 credits of other elective courses, offered within the Faculty or approved as credit equivalencies in order to complete the 93-credit degree.

Minimum Writing Requirement

All students are required to submit at least one research paper. This requirement may be satisfied by:

1. writing an essay in a course in which the essay constitutes no less than 75% of the final grade;
2. writing a term essay under independent supervision, for credit, within the Faculty of Law;
3. writing an article, note, or comment or equivalent substance that is published or accepted for publication in the McGill Law Journal and approved by the Faculty Adviser to that publication.

Papers written jointly do not satisfy this requirement.

Japan (Non-Thesis) (M.B.A.) (51 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Master of Business Admin

Program credit weight: 51

Program Description

**This program is no longer accepting new students."

Japan Management (Non-Thesis): Finance (M.B.A.) (57 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Master of Business Admin

Program credit weight: 57

Program Description

**This program is no longer accepting new students."

The McGill MBA Japan program of the Desautels Faculty of Management of McGill University is the leading MBA program in Japan, and one of the leading weekend programs in Asia. Designed for working people with several years of experience, the McGill MBA Japan program allows you to complete a Master of Business Administration program on weekends, without leaving employment.

Based on McGill's world-leading Integrative MBA Curriculum, the MBA Japan program allows you to complete a full MBA by studying two weekends per month in as little as 20 months. Taught by world-leading professors from McGill's home campus, the MBA Japan attracts highly qualified students from Japan and around the globe.

The Finance Concentration focuses on how firms raise capital and on the optimal allocation of capital for investments. This concentration prepares students for careers in corporate treasury functions, asset management, and investment banking.

Required Core Courses (21 credits)

All M.B.A. students must complete the following core courses:

Japan Management (Non-Thesis): Global Strategy and Leadership (M.B.A.) (57 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Master of Business Admin

Program credit weight: 57

Program Description

This program is no longer accepting new students.

The McGill MBA Japan program of the Desautels Faculty of Management of McGill University is the leading MBA program in Japan, and one of the leading weekend programs in Asia. Designed for working people with several years of experience, the McGill MBA Japan program allows you to complete a Master of Business Administration program on weekends, without leaving employment.

Based on McGill's world-leading Integrative MBA Curriculum, the MBA Japan program allows you to complete a full MBA by studying two weekends per month in as little as 20 months. Taught by world-leading professors from McGill's home campus, the MBA Japan attracts highly qualified students from Japan and around the globe.

The Global Strategy and Leadership Concentration prepares students for the challenges posed by a globalizing marketplace. The approach is cross-disciplinary and includes courses in strategy, organizational behavior, and international business. Students will consider questions such as: What issues will the leaders of tomorrow face and how can they best tackle them? How to take a firm international? How to manage a multi-cultural workforce? How to launch a new venture? How to promote sustainable development? Students will develop skills

valued by employers in consulting, business development, project management, and related fields.

As technology reshapes the globe and innovations transform markets and organizations, the 21st century manager will be deeply immersed in technology and innovation management. As information technology is now present in more products and processes, managers need to understand the processes surrounding its strategic use and development. As manufacturing and service operations now stretch the globe, issues of logistics and supply chain integration become more important. As innovative products increasingly create and transform markets, managers must master the technology development process. This concentration provides tools, frameworks, and integration of all aspects of organizational operations, supply chain, IT processes and

innovation management. Students following this concentration will be uniquely qualified to take jobs in new product development, IT strategy, operations and supply chain management, and technology consulting. A unique aspect of the concentration is the capstone project course where students work on solving a real-life technology innovation problem.

Manufacturing Management (Non-Thesis) (M.M.) (56 credits)

Offered by: Management (Desautels Faculty of Management)

Degree: Master of Management

Program credit weight: 56

Required Courses (21 credits)

Course	Title	Credits
ACCT 604	Financial Statements 1.	3
FINE 674	Fintech.	3
FINE 678	Financial Economics.	3
FINE 679	Corporate Finance Theory.	3
FINE 680	Investments.	3

Program Description

M.M. in Manufacturing Management, Non-Thesis program provides a professional, hands-on approach that addresses all major issues germane to the optimization of operations. The program moved beyond a manufacturing focus to all facets of supply chains, logistics and manufacturing management. A key feature of the program is industry participation and interaction. To ensure a profound comprehension of the issues and challenges facing business today, courses have corporate sponsors and partners that provide case studies, plant tours, seminars, industrial projects and internships. The major emphasis of these activities is on improving productivity and operational effectiveness. The program aims at training the students with diversified backgrounds who wish to pursue a career in the top management of global operations and supply chain.

A version of M.M. in Manufacturing Management, Non-Thesis program is collaboratively offered with Zhejiang University Hangzhou in China.

Retailing (Non-Thesis) (M.M.) (45 credits)

Offered by: Management (Desautels Faculty of Management)**Degree:** Master of Management**Program credit weight:** 45

Program Description

The Master of Management in Retailing; Non-Thesis, is focused on the customer journey and explores how retail disruptors can lead to retail innovations that can significantly improve operational efficiencies, competitiveness and impact customer satisfaction to provide a foundation for a better society. International in scope, the program will focus on how retailers must adapt to the rapidly changing and increasingly complex global business environment to thrive. It aims to integrate diverse disciplines and experiential learning opportunities, including an optional internship, research opportunities with the state-of-the-art Retail Lab in addition to an international trip and Global Retail Challenge.

Management (Ph.D.)

Offered by: Management (Desautels Faculty of Management)**Degree:** Doctor of Philosophy

Program Description

The Ph.D. in Management focuses on distinctive research and competent educator skills across various aspects of business. Specialization in one of the following seven disciplines: accounting, finance, information systems, marketing, operations management, including retail management, organizational behaviour, as well as strategy and organization. The program consists of two years of coursework followed by the dissertation research phase.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Management: Environment (Ph.D.)

Offered by: Management (Desautels Faculty of Management)

Degree: Doctor of Philosophy

Program Description

This program is currently not offered.

The new Environment Option provides students with an appreciation of the role of science in informing decision-making in the environment sector, and the influence that political, socioeconomic and ethical judgments have. The option also provides a forum whereby graduate students bring their disciplinary perspectives together and enrich each other's learning through structured courses, formal seminars, and informal discussions and networking. Students who have been admitted through their home department or faculty may apply for admission to the option. Option requirements are consistent across academic units. The option is coordinated by the MSE, in partnership with participating academic units.

Medical Radiation Physics (Thesis) (M.Sc.) (45 credits)

Offered by: Medical Physics Unit (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. program in Medical Radiation Physics provides candidates with the knowledge required to enter into the field of medical physics. The program relies on a strong fundamental science background and enables candidates to undergo further training through a clinical residency program or to further advanced graduate studies in medical physics through a Ph.D. degree. Graduates from the program typically find employment in clinical settings, academia, industry, or governmental research and regulatory agencies. The program is accredited by the Commission for Accreditation of Medical Physics Education Programs (CAMPEP).

Experimental Medicine (Thesis) (M.Sc.) (45 credits)

Offered by: Medicine (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The overall objective of this program is to train students in the in-depth analysis of fundamental, translational and/or clinical research.

Students perform studies at diverse levels, from molecular, cellular, and tissue to whole animal, human, and population in order to elucidate mechanisms behind human diseases, leading to drug discovery. Students are trained to perform research in both academic and industrial settings.

Course choices should be made in consultation with research supervisor(s). Courses may be taken outside the department at the 500 level or higher in medical and allied sciences .

¹ Students must get approval from the GPD for courses at the 500 level or higher from other allied health sciences.

Regenerative Medicine (Gr. Cert.) (15 credits)

Offered by: Medicine (Faculty of Medicine and Health Sciences)

Degree: C-RMED

Program credit weight: 15

Program Description

The Graduate Certificate in Regenerative Medicine focuses on biology of stem cells, their uses in diagnostic and therapeutic applications, the practicalities of generating them, and using and modifying them for clinical translation. Exploration of the combination of stem cell-based model systems for drug discovery and disease modelling as well as the ethical implications of their use.

Clinical Research (Gr. Dip.) (30 credits)

Offered by: Medicine (Faculty of Medicine and Health Sciences)

Degree: Graduate Diploma in Clinical Research

Program credit weight: 30

Program Description

The objectives of this program are to give students exposure to both theoretical and practical issues relevant to the conception and conduct of a clinical research study, and to put these principles into practice by participating in an ongoing clinical trial. The training provided qualifies students to manage and design clinical research studies in both academic and industrial settings.

Required Courses (24 credits)

Complementary Courses (6 credits)

Six credits at the 500 level or higher chosen from: Experimental Medicine (EXMD), Pharmacology and Therapeutics (PHAR), Epidemiology and Biostatistics (EPIB). With prior approval from the Division's Student Affairs Coordinator, courses at the 500 level or higher, from other Allied Health Sciences departments may be accepted.

Family Medicine (Thesis) (M.Sc.) (45 credits)

Offered by: Family Medicine (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Family Medicine is a research-oriented, two-year graduate program of 45 credits. The program focuses on core methodologies, frameworks, and applications of scientific principles within the realm of family medicine research.

Family Medicine (Thesis): Global Health (M.Sc.) (45 credits)

Offered by: Family Medicine (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Family Medicine; Global Health emphasizes the foundational values of global primary health care including health equity, cultural safety, social participation in health, and integrated, whole-person care over the life-span. The program provides comprehensive training in quantitative and qualitative methods, the participatory research approach, and integrated knowledge translation and exchange. Topics include primary health care policy and practice, decolonizing approaches, program management, social determinants of health and health equity, and healthcare delivery innovations. The thesis must focus on an international or Canadian global health issue.

Family Medicine & Primary Care (Ph.D.)

Offered by: Family Medicine (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The PhD program will build upon our MSc in Family Medicine.

Research topics in the field of family medicine and primary health care cross conventional discipline boundaries and research traditions. Our training program focuses on patient-oriented, community-based research using innovative methodologies and participatory approaches. The program advances academic excellence in family medicine and primary health care.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

PhD Comprehensive Exam

PhD students are expected to demonstrate proficiency in the following topics: basic statistics, epidemiology, qualitative and mixed methods, literature synthesis, knowledge translation and participatory research approaches. If a PhD candidate does not have prior training in any of these areas and believes that he or she cannot answer questions on these topics during the comprehensive exam, additional courses will be required for the PhD student.

Elective Course (3 credits)

3 credits in advanced research methods, at the 600 level or higher. May be chosen from outside the Department, in consultation with the student's academic advisor or supervisor.

Oncology (Grad. Dip.) (30 credits)

Offered by: Gerald Bronfman Dept Oncology (Faculty of Medicine and Health Sciences)

Degree: D-ONCO**Program credit weight:** 30

Program Description

The Graduate Diploma in Oncology provides exposure to the entire spectrum of principles and practice in all fields of oncology as well as its research domains while allowing exploration in more detail of a specific area of focus through courses and a practicum. The areas of focus are: population and global cancer control, psychosocial oncology/palliative care, clinical cancer research, or cancer care services and quality.

Pathology (Ph.D.)

Offered by: Pathology (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Doctor of Philosophy (Ph.D.) in Pathology covers research topics across multiple disciplines in a broad range of diseases including cancer, autoimmune disorders, pulmonary diseases and neurodegenerative disorders. The program offers access to cutting-edge research methodologies for in-depth analysis of fundamental, translational and/or clinical research to understand mechanisms of disease pathogenesis.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. 9 credits of graduate-level courses approved by the student's Supervisory Committee.

Courses are selected on the basis of the area of research interest and the background of the student, and must include a course in statistical analysis if not presented upon admission.

Mental Health (Ph.D.)

Offered by: Psychiatry (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Mental Health, which is rooted in a strong tradition of multidisciplinary research approaches, focuses on the development of mental health services and policy, social and cultural psychiatry, and clinical and transnational psychiatry. Students are exposed to a rich body of knowledge in psychiatry and mental health research methods by participating in regular academic activities organized by different units of the Department of Psychiatry, such as weekly research seminars, global mental health rounds, Indigenous mental health workshops, the Summer Program in Cultural Psychiatry, and the conferences and workshops organized by the Advanced Study Institute in Cultural Psychiatry.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Offered by: Surgery (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Surgical and Interventional Sciences; Global Surgery emphasizes health care needs specifically within the surgical field in resource-limited settings. It comprises three main pillars: research, education, and mentorship. The program involves extensive research work, the design and implementation of innovative approaches in surgical care and injury surveillance, that advance the surgical capacities in low and middle income countries. The program offers global surgical endeavours allowing professionals from partner countries and Canada to engage in a learning and knowledge transfer experience. The program provides the opportunity to engage in international research projects including injury epidemiology surveillance and assessment of surgical access through the study of databases. The thesis must be relevant to global surgery.

Program credit weight: 45

Program Description

The M.Sc. in Surgical and Interventional Sciences; Surgical Innovation program focuses on hands-on learning experience and the skills necessary for the creation of novel, needs driven and marketable prototypes used in development of novel surgical and medical devices. Identification of clinical needs and innovate solutions.

Depending on their individual background, students may be asked by their Research Supervisory Committee to take additional courses.

Surgical and Interventional Sciences (Thesis): Surgical Outcomes Research (M.Sc.) (45 credits)

Offered by: Surgery (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Surgical and Interventional Sciences; Surgical Outcomes Research program focuses on the science of measuring and improving the outcomes of surgical patients. The program addresses research

methods, biostatistics, and strategies to measure and improve postoperative outcomes. The thesis component of the program must focus on a topic in the field of surgical outcomes research.

Surgical and Interventional Sciences (Non-Thesis) (M.Sc.) (45 credits)

Offered by: Surgery (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

This M.Sc. in Surgical and Interventional Sciences; Non#Thesis offers training in core fundamentals of modern surgical research. The

program is flexible and provides the core disciplines in more specific areas such as global surgery, innovation, education, or other disciplines. The individual research interests of the faculty cover a wide spectrum, from injury, repair, recovery, tissue engineering, transplantation, fibrosis, cancer and stem cell biology, biomechanics, and organ failure, to surgical simulation, surgical innovation, education, and evaluative/outcomes research. Importantly, the project(s) is performed in a collaborative spirit with basic and clinician scientists working together using interdisciplinary approaches to solve the most challenging problems in the field of surgery.

9 credits taken from 500-, 600-, or 700-level courses at the University, which may include courses from the list above, will be taken with the approval of the director of the program/adviser.

Surgical and Interventional Sciences (Non-Thesis): Oncology (M.Sc.) (45 credits)

Offered by: Surgery (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Surgical and Interventional Sciences; Non#Thesis - Oncology program offers training in surgical research related to oncology and examines the broad range of disciplines in cancer research and care. In addition to an oncology practicum that focuses

on a research project in a chosen cancer research discipline, there also will be a surgery research project with a focus on cancer.

Electives (15 credits)

15 credits at the 500 level or higher may be chosen from the course list above or from other courses. The courses should have a surgery or oncology related theme. Selections to be approved by the director of the program or advisor.

Surgical and Interventional Sciences (Ph.D.)

Offered by: Surgery (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Surgical and Interventional Sciences focuses on the field of surgery and interventions. The program emphasizes research that involves innovative surgical techniques, patient management strategies, and the application of new technological advances in the medical field.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Surgical Innovation (Gr. Cert.) (15 credits)

Offered by: Surgery (Faculty of Medicine and Health Sciences)
Program credit weight: 15

Program Description

The core of this 15-credit graduate program consists of two innovation courses (EXSU 620 Surgical Innovation 1. and EXSU 621 Surgical Innovation 2.) delivered by McGill Department of Surgery, with some sessions offered by external partners: John Molson School of Business (lean start-up), Concordia (software design), Local Industry (Regulatory & IP), and ETS (prototyping). the first semester of the program core focuses on team building and, supported by lectures, the students embark on a needs-finding process by observing all aspect of clinical activity in their focus themes. Trainees learn basic prototyping skills, start up organization and project management, supplemented by a basic statistics course and an introduction to the current status of biomedical research innovation. This certificate provides a solid foundation in the innovation process.

Required Courses (12 credits)

9 credits in:

Course	Title	Credits
EXSU 619	The Hospital Environment.	3

EXSU 621	Surgical Innovation 2.	3

Course	Title	Credits
EDPE 575	Statistics for Practitioners.	3
EPIB 507	Biostats for Health Sciences.	3
EXSU 606	Statistics for Surgical Research.	3

Some courses may be substituted with equivalents if timetabling requires it.

Elective Course (3 credits)

3 credits at the 500 level or higher, taken in consultation with the program director/adviser.

Surgical Innovation (Gr. Dip.) (30 credits)

Offered by: Surgery (Faculty of Medicine and Health Sciences)

Program credit weight: 30

Program Description

The cores of this 30-credit program are two-fold. Firstly, two innovation courses are offered by the McGill Department of Experimental Surgery (EXSU 620 Surgical Innovation 1. & EXSU 621 Surgical Innovation 2.) and supporting courses are delivered by the McGill Department of Surgery with some sessions in those courses provided by external partners: Local Industry (Regulatory & IP), the John Molson School of Business (JMSB) (lean start-up), Concordia University (software design), and L'École de technologie supérieure (ETS) (prototyping). Secondly, fundamental business and management courses provided by the School of Continuing Studies (McGill) and JMSB are taken concurrently and reinforce the innovation project team experience. Students embark on a hospital-based needs finding process by observing all aspects of clinical activity in their focus themes. The trainees learn basic prototyping skills, start-up organization, and project management. This is supplemented by a basic statistics course and an introduction to the current status of biomedical research innovation. This graduate diploma then gives a business-oriented training in the surgical innovation process.

Some courses may be substituted with equivalents at the 500 level or higher if timetabling or background of the student requires it, e.g., prior qualification in accounting.

Cell Biology (Thesis) (M.Sc.) (45 credits)

Offered by: Anatomy and Cell Biology (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Cell Biology focuses on the study of the assembly, structure and functional dynamics of macromolecular protein complexes. The research topics range from the understanding of the mechanisms of bacterial antimicrobial resistance to unveiling the mechanisms of cell division, transport and sorting of proteins, structure and function of extracellular matrices, and the mechanisms of cancer and aging. Training includes the application of cutting-edge technologies to molecular and cell biology, based on hypothesis-driven research.

0-3 credits, at the 500 level or higher in the biomedical and allied sciences.

The Graduate Advisory Committee may stipulate additional course work depending on the background of the candidate. BIOC 450 Protein Structure and Function, and BIOC 454 Nucleic Acids, are additional requirements for those who have not previously completed equivalent courses in their prior training.

Biochemistry: Bioinformatics (Ph.D.)

Offered by: Biochemistry (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Biochemistry; Bioinformatics involves the development of strategies for experimental design, the construction of computer science tools to analyze large datasets, the application of modelling techniques, the integration of biological databases, and the use of algorithms and statistics. Permission of the Graduate Program Director

to enroll in this concentration is required to ensure that the proposed research thesis focusses on bioinformatics related to biochemistry.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (6 credits)

Biochemistry: Chemical Biology (Ph.D.)

Offered by: Biochemistry (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Biochemistry; Chemical Biology is overseen by the Chemical Biology Thematic Group, and it engages in research topics that span structural biology, enzymology, nucleic acid research, signaling pathways, single molecule biophysics, biophysical chemistry of living tissues, and new chemistry and physics from biological systems to develop pharmaceutical applications. The thesis must focus on chemical biology related to biochemistry.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Translational Biomedical Engineering (Non-Thesis) (M.Sc.A.) (45 credits)

Offered by: Biomedical Engineering (Faculty of Engineering)

Degree: Master of Science Applied

Program credit weight: 45

Program Description

The M.Sc.(Applied) in Translational Biomedical Engineering; Non-Thesis is a full-time specialized 13- to 16-month professional program in translation biomedical engineering. This is an intensive program that focusses on the biomedical engineering industry through a comprehensive curriculum covering essential skills and knowledge needed to translate biomedical engineering research into clinical and commercial solutions.

The program consists of three main components that are unique to the translational process in biomedical engineering, including: 1) translational course on intellectual property, regulatory affairs, quality management systems, clinical trials and reimbursement; 2) fundamental science courses in biomedical engineering; and 3) an experiential component, comprising of a closely supervised 4-month internship in the biomedical engineering industry.

None of the courses taken in the graduate certificate in Translational Biomedical Engineering can be credited towards the M.Sc.(Applied) once the graduate certificate has been awarded.

Translational Biomedical Engineering (Gr. Cert.) (15 credits)

Offered by: Biomedical Engineering (Faculty of Engineering)

Program credit weight: 15

Program Description

This program comprises mandatory courses dealing with topics that are unique to the translational process in the biomedical engineering environment. Topics covered will include: managing intellectual property; patents and the patenting process; regulatory affairs; medical standards; quality management systems; and clinical trials. Complementary courses will provide students with advanced training in a specialized area of biomedical engineering selected from the areas where Departmental staff have significant expertise.

In cases where students have taken one or more of the core courses as part of another program, these core courses will be replaced with the equivalent number of credits, at the 500 level or higher, by other appropriate courses selected in consultation with the program director.

Required Courses (9 credits)

Three courses dealing with issues related specifically to the translation of biomedical engineering advances to clinical and commercial environments:

Course	Title	Credits
BMDE 653	Patents in Biomedical Engineering.	3
BMDE 654	Biomedical Regulatory Affairs - Medical Devices.	3
BMDE 655	Biomedical Clinical Trials - Medical Devices.	3

Complementary Courses (6 credits)

Students must complete 6 credits of biomedical engineering course work selected from one or more of the following domains or other appropriate courses at the 500 level or higher approved by the Program Director:

Human Genetics (Ph.D.)

Offered by: Human Genetics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

Candidates entering Ph.D. 1 must complete at least three years of full-time resident study (six terms). The normal and expected duration of the Ph.D. program is four to five years. A student who has obtained a master's degree at McGill in a related field, or at an approved institution elsewhere, and is proceeding in the same subject toward a Ph.D. degree may, upon the recommendation of the Graduate Training Committee, enter at the Ph.D. 2 level.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Pharmacology: Environmental Health Sciences (Ph.D.)

Offered by: Pharmacology and Therapeutics (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Pharmacology; Environmental Health Sciences program is designed to train professionals for advanced basic research, teaching, and leadership positions in environmental health sciences. The Option will add a distinct focus on the interplay between the environment and health research, including a broad environmental perspective, exposure sciences, hazard screening methodologies, epidemiological approaches, health implications of environmental quality, and policy approaches.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Biomedical Science Translational Research (Gr. Cert.) (15 credits)

Offered by: Pharmacology and Therapeutics (Faculty of Medicine and Health Sciences)

Program credit weight: 15

Program Description

The Graduate Certificate in Biomedical Science Translational Research is an introduction to relevant clinical aspects of translating scientific discovery as a means of bridging the gap between research and application in clinical settings, while promoting future collaboration among scientists, clinicians and clinician-scientists while promoting future collaboration. The program includes clinical mentorship.

Communication Sciences & Disorders (Non-Thesis): Speech-Language Pathology (M.Sc.A.) (82 credits)

Offered by: Commun Sciences & Disorders (Faculty of Medicine & Health Sciences)

Degree: Master of Science Applied

Program credit weight: 82

Program Description

The M.Sc.(A.) in Communication Sciences and Disorders; Non-Thesis

- Speech-Language Pathology focuses on training students to enter the field of Speech-Language Pathology using a curriculum guided by a competency-based framework, including academic and supervised clinical practicum components. This professional program is accredited by The Council for Accreditation of Canadian University Programs in Audiology and Speech-Language Pathology.

Communication Sciences and Disorders (Ph.D.)

Offered by: Commun Sciences & Disorders (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. program provides a foundation for creative research and scientific problem-solving in communication sciences (speech, language, hearing, voice) in typical and atypical populations. The program structure is flexible to encourage students to customize their program through the selection of coursework, seminars, comprehensive topics, research experiences, and thesis topic. The School's doctoral program follows a mentor model and students work closely with faculty supervisors who have international reputations in their respective areas.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (6 credits)

For both PhD 1 and PhD 2:

Course	Title	Credits
SCSD 652	Advanced Research Seminar 1.	3
SCSD 653	Advanced Research Seminar 2.	3
SCSD 701	Doctoral Comprehensive.	0

Complementary Courses (6 or 21 credits)

For both PhD 1 and PhD 2: 6 credits of statistics courses at the 500 level or higher, pre-approved by the supervisor and the graduate program director.

In addition to the above, students entering at PhD 1 must take the following 15 credits:

Course	Title	Credits
SCSD 654	Advanced Research Seminar 3.	3
SCSD 685	Research Project 1.	3
SCSD 686	Research Project 2.	3

Plus 6 credits, of graduate-level courses, pre-approved by the supervisor and the graduate program director.

Communication Sciences and Disorders: Language Acquisition (Ph.D.)

Offered by: Commun Sciences & Disorders (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Requirements

This unique interdisciplinary program focuses on the scientific exploration of language acquisition by different kinds of learners in diverse contexts. Students in the Language Acquisition Program are introduced to theoretical and methodological issues on language acquisition from the perspectives of cognitive neuroscience, theoretical linguistics, psycholinguistics, education, communication sciences and disorders, and neuropsychology.

For details go to: www.psych.mcgill.ca/lap.html.

Students who have completed a Master's degree with research thesis in Communication Sciences and Disorders or a related area are admitted at level PhD 2. High-caliber students who have not completed a research thesis at the Master's level can enter the Qualifying Year Program (admitted at level PhD 1), which includes extra requirements (coursework and a research project) at the onset of the program.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Epidemiology (Thesis) (M.Sc.) (45 credits)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

Students will study the foundations and principles of epidemiology and applied biostatistics, in order to design, conduct, and analyze clinical, population-based, environmental, policy, and methodological health-related research. Graduates will be prepared to engage in scientific collaboration, and communicate results to other scientists and diverse audiences.

Epidemiology (Non-Thesis): Pharmacoepidemiology (M.Sc.) (48 credits)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Master of Science

Program credit weight: 48

Program Description

This program provides in-depth training for graduate students on pharmacoepidemiologic methods and the application of these methods to study the population effects (benefits and harm) of pharmaceutical products. Students will develop knowledge and capacity to critically evaluate pharmacoepidemiologic studies, learn how to apply specific methods and understand how to apply research results for knowledge translation or policy purpose. Career opportunities for graduates are multiple and include work in industry, government, or academia. Students will be required to participate in the Pharmacoepidemiology Journal Club. Research topics must be related to pharmacoepidemiology and approved by the program coordinating committee.

Epidemiology (Non-Thesis): Environmental & Occupational Health (M.Sc.) (48 credits)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Master of Science

Program credit weight: 48

Program Description

This program provides in-depth training for graduate students in methods used in Environmental and Occupational Health (EOH) and the application of these methods to study the effects of environmental and occupational exposures on human health. Students will be provided with tools to critically evaluate studies in EOH, as well as to be able to participate in these studies, learn how to apply specific methods to environmental and occupational problems, and understand how to apply research results to public health or policy. Career opportunities exist in academia, industry, and the public health sectors. Each student will be assigned a supervisor to provide guidance for their project. Research topics must be related to environmental and occupational health and approved by the program coordinating committee.

Or other course, at the 500 level or higher, selected with the Program's Academic Advisor.

Population and Public Health Interventions (social and behavioural science)

3 credits from:

Expand allContract all

Course	Title	Credits
EPIB 632	Mental Disorders: Population Perspectives and Methods.	3
PPHS 614	Knowledge Translation and Public Health Leadership .	3
PPHS 616	Principles and Practice of Public Health Surveillance.	3
PPHS 618	Program Planning and Evaluation in Public Health .	3

Or other course, at the 500 level or higher, selected with the Program's Academic Advisor.

Elective Courses (15 Credits)

15 credits of coursework, at the 500 level or higher. Students may choose to focus on more advanced methods in epidemiology, biostatistics, geography, or substantive areas such as environmental or occupational health, or to select a variety of courses that will deepen their general knowledge of the disciplines that influence population and public health.

Courses will be selected with and approved by the Program's Academic Advisor.

Courses may not satisfy more than one program requirement.

Epidemiology (Ph.D.)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

Epidemiology is the study and analysis of the patterns and causes of disease in human populations. It forms the core discipline of

public health by identifying excess illness and by gaining the etiologic understanding to intervene toward the improvement of population health. The PhD program in epidemiology at McGill trains scientists and health professionals to design and conduct studies, analyze health data and effectively communicate scientific results, and to gain novel insights into the causes and prevention of diseases at the population level. Epidemiologic work at the doctoral level involves a thorough integration of biological knowledge of pathogenesis, statistical knowledge of quantitative analysis and causal inference, and sociological knowledge to place these insights in the context of dynamic and interconnected human populations. Major areas of strength at McGill include epidemiologic methods, clinical epidemiology, infectious diseases, social epidemiology, pharmacoepidemiology, public and population health, global health, environmental epidemiology, chronic diseases and aging, and perinatal epidemiology.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (17 credits)

Expand allContract all

Course	Title	Credits
EPIB 701	Ph.D. Comprehensive Examination.	0
EPIB 702	Ph.D. Proposal.	0

EPIB 705	Doctoral Level Epidemiologic Methods 2.	4
EPIB 706	Doctoral Seminar in Epidemiology.	3
EPIB 707	Research Design in Health Sciences.	3

Complementary Courses (9 credits)

9 credits of coursework, at the 500 level or higher, with a minimum of 3 credits in biostatistics and 6 credits in epidemiology and/or substantive topic (normally related to the thesis topic). Courses must be chosen in consultation with the student's supervisor and/or the program director or advisor.

Epidemiology: Global Health (Ph.D.)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

This option will provide enhanced training in global health to graduate students registered in the Ph.D. in Epidemiology; Global Health degree program at McGill. Students will become familiar with topics of global health relevance and incorporate this into their core coursework and thesis research. The thesis must be relevant to global health and approved by the Global Health Coordinating Committee. Contextualizing the core training students receive in epidemiology and in their respective substantive discipline within the global health research domain will enhance their academic experience. Graduates of this option will be prepared to pursue further training in global health or to undertake a variety of career opportunities in global health in Canada or internationally.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Epidemiology: Pharmacoepidemiology (Ph.D.)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

This program provides in-depth training for graduate students on pharmacoepidemiologic methods and the application of these methods to study the population effects (benefits and harm) of pharmaceutical products. Students will acquire the skills to become independent investigators and conduct original research in pharmacoepidemiology. Career opportunities for graduates are multiple and include work in industry, government, or academia. Students will be required to participate in the Pharmacoepidemiology Journal Club. Research topics must be related to pharmacoepidemiology and approved by the program coordinating committee.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Epidemiology: Population Dynamics (Ph.D.)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Epidemiology; Population Dynamics program focuses on training in demographic methods (including life table analyses) and critical population dynamic issues such as population health, migration, aging, family dynamics, and labour markets.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. Biostatistics (Ph.D.)

Offered by: Epidemiology and Biostatistics (Faculty of Medicine & Health Sciences)

Degree: Doctor of Philosophy

Program Description

Students will study theoretical and applied statistics and related fields; the program will train them to become independent scientists able to develop and apply statistical methods in medicine and biology and make original contributions to the theoretical and scientific foundations of statistics in these disciplines. Graduates will be prepared to develop new statistical methods as needed and apply new and existing methods in a range of collaborative projects. Graduates will be able to communicate methods and results to collaborators and other audiences, and teach biostatistics to biostatistics students, students in related fields, and professionals in academic and other settings.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Music (M.Mus.): Composition (Thesis)

Offered by: Music (Schulich School of Music)

Degree: Master of Music

Program credit weight: 45

Program Description

The M.Mus. in Music; Composition focuses on the development of individual voices through private instruction with some of Canada's most accomplished composers, all of whom have distinguished themselves through high-profile commissions, performances, recordings, and awards. The faculty members' diverse interests ensures a suitable mentor/supervisor.

Students admitted to the M.Mus. in Music; Composition program who have undergraduate degrees other than the B.Mus.; Major in Composition from McGill University, may be required to successfully complete one or more undergraduate course(s) before completion of the Master's program.

Music (M.A.): Music Education (Thesis) (45 credits)

Offered by: Music (Schulich School of Music)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Music; Music Education provides an opportunity for studio- and classroom-based teachers and music educators working in other community settings, to explore current issues in music education and to implement their own research studies. Seminars introduce foundations of a range of research methodologies and critical thinking skills. The thesis can be submitted in one of two formats: in-depth monograph-style thesis, or a research-paper-based thesis. Students who prefer to write an in-depth monograph-style thesis will take MUGS 684 Master's Thesis Research 2. as a complementary course. Students who prefer to write a research-paper-based thesis will take two more seminars.

Students admitted to the M.A. in Music; Music Education program who have undergraduate degrees other than the B.Mus.; Minor in Music Education from McGill University, may be required to successfully complete one or more undergraduate course(s) before completion of the Master's program.

Music (M.A.): Musicology (Thesis) (45 credits)

Offered by: Music (Schulich School of Music)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Music; Musicology program focuses on the diverse ways in which music's political, social, and historical contexts shape the meanings. The program comprises foundational methodologies, critical thinking skills and exploration of themes in musicological literature and analytical skills. Students write an in-depth monograph-style thesis.

Students admitted to the M.A. in Music; Musicology program who have undergraduate degrees other than the B.Mus.; Major in Music History from McGill University, may be required to successfully complete one or more undergraduate course(s) before completion of the Master's program.

Music (M.A.): Music Technology (Thesis) (45 credits)

Offered by: Music (Schulich School of Music)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Music; Music Technology encourages interaction between musical creation, technology, and research, with an intensive focus on scientific research of advanced music technologies. Topics include computer music, new media, musical acoustics, digital signal processing, human-computer interaction, synthesis and gestural

control, music information retrieval and music perception and cognition.

Students admitted to the M.A. in Music; Music Technology may be required to successfully complete one or more undergraduate course(s) before completion of the Master's program.

Required Courses (30 credits)

Thesis Courses

The candidate will undertake supervised research leading to a thesis that will utilize or investigate an aspect of musical science and technology.

Music (M.A.): Theory (Thesis) (45 credits)

Offered by: Music (Schulich School of Music)

Degree: Master of Arts

Program credit weight: 45

Program Description

The M.A. in Music; Theory explores how specific pieces of music are put together and how this may be generalized to relate to the way other pieces of music are composed, including music theory, various analytical models and the critical issues that define the discipline. The thesis can be submitted in one of two formats: in-depth monograph-style thesis, or a research-paper-based thesis. Students who prefer to write an in-depth monograph-style thesis will take MUGS 684 Master's Thesis Research 2. as a complementary course. Students who prefer to write a research-paper-based thesis will take two more seminars.

Depending on their background, students admitted to the M.A. Music; Theory may be required to successfully complete one or more undergraduate course(s) before completion of the Master's program.

Sound Recording (Non-Thesis) (M.Mus.) (60 credits)

Offered by: Music (Schulich School of Music)

Degree: Master of Music

Program credit weight: 60

Program Description

The M.Mus. in Sound Recording; Non-Thesis program is a course-based, professional training program designed for musicians who wish to develop the skills required in the music recording and media industries. It is based on the German Tonmeister program and offers extensive, hands-on opportunities to record a broad spectrum of solo recitals, large opera, and symphonic repertoire with soloists and choirs, as well as complex jazz band and pop idioms.

Students are admitted to the M.Mus. in Sound Recording; Non-Thesis may be required to successfully complete one or more undergraduate course(s) before the beginning of the Master's program.

Details concerning the comprehensive examinations, thesis and academic regulations are available from the Graduate Studies Coordinator, Schulich School of Music or from the Music Graduate website at: <http://www.mcgill.ca/music/programs>.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Composition Performance

The candidate must present a concert of his/her compositions. With the permission of the Composition Area Committee, the compositions may be presented as parts of two or three concerts, or as a list of national and international performances since the student began his/her residency.

Music: Performance Studies (D.Mus.)

Offered by: Music (Schulich School of Music)

Degree: Doctor of Music

Program Description

The D.Mus. in Music; Composition offers private instruction with some of Canada's most accomplished composers as well as studies in different compositional methods and technologies.

Students admitted to the D.Mus. in Music; Composition program who have a master's degree other than the M.Mus. in Music; Composition from McGill University, may be required to successfully complete one or more undergraduate course(s) before completion of the doctoral program.

Offered by: Music (Schulich School of Music)

Degree: Doctor of Music

Program Description

The Doctor of Music (D.Mus.); Performance Studies focuses on practice through in-depth research in areas linked to performance. The program includes a doctoral project that is completed through artistic research or research papers choices. Live performance requirements are part of both choices.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Music: Gender and Women's Studies (Ph.D.)

Offered by: Music (Schulich School of Music)

Degree: Doctor of Philosophy

Program Description

This program is open to doctoral students who are interested in cross-disciplinary research that focuses on issues centrally related to gender, sexuality, feminist theory, and/or women's studies. This program is offered in collaboration with the McGill Institute for Gender, Sexuality, and Feminist Studies that includes faculty and graduate students from across the University.

Students admitted to the PhD in Music who have a master's degree other than a master's degree in music from McGill University may be required to successfully complete one or more undergraduate course(s) before completion of the doctoral program.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Details concerning the comprehensive examinations, thesis, and academic regulations are available from the Graduate Studies

Coordinator, Schulich School of Music or from the Music Graduate website at: <http://www.mcgill.ca/music/programs>.

Performance (Gr. Dip.) (30 credits)

Offered by: Music (Schulich School of Music)

Program credit weight: 30

Program Description

A one-year graduate performance diploma that allows excellent musicians to refine their technique and master repertoire through intensive coaching, practice, and performance projects. Designed as a polishing diploma, the program prepares musicians for professional careers as soloist, opera singers, collaborative pianists, chamber, jazz and orchestral musicians or for further graduate studies in performance. Flexible program requirements, with range of performance project options including solo, chamber, recording, orchestral auditions, and creative collaborations. Admission is by

audition, with candidates having previously completed a B.Mus., a Licentiate, or M.Mus.

Advanced Nursing (Non-Thesis): Advanced Practice Nursing (M.Sc.A.) (48 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Degree: Master of Science Applied

Program credit weight: 48

Program Description

The M.Sc.(A) in Advanced Nursing; Non-Thesis - Advanced Practice Nursing (APN) focuses on advanced practice nursing roles in diverse settings and populations. Content is organized based on a Strength-Based Nursing and health care approach and focuses on family assessment and intervention, collaborative partnerships, and the development of capacities to reflect purposefully and in depth on nursing practice.

This concentration is also designed to develop policy, leadership and nursing education skills. There is an emphasis on bringing the best available evidence to nursing care practice within a variety of healthcare settings, roles, or situations. The knowledge translation stream or research stream choices within the program are to be selected to address a clinically relevant nursing challenge.

Advanced Nursing (Non-Thesis): Global Health (M.Sc.A.) (48 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Degree: Master of Science Applied

Program credit weight: 48

Program Description

The Master of Science (Applied) in Advanced Nursing; Non-Thesis - Global Health program focuses on collaborative, trauma-informed, culturally safe, Strengths-Based Nursing (SBN) and health care approaches to working with underserved populations including in limited-resource and rural environments. The concentration stresses the importance of understanding the inherent power dynamics, systemic barriers, and ethical dilemmas that arise through this work. The program emphasizes health equity focused content throughout. In the final year of study, the program includes one semester in a global health partnership site (locally, provincially or internationally) that focuses on clinical and project-based work.

Nursing (Non-Thesis): Direct Entry to Advanced Practice Nursing (M.Sc.A.) (61 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Degree: Master of Science Applied

Program credit weight: 61

Program Description

The M.Sc.(Applied) in Nursing; Non-Thesis - Direct Entry to Advanced Practice Nursing program is an entry to practice program structured for individuals with a non-nursing undergraduate degree to study to become a nurse in a three-year Master's program. The program focuses on the preparation needed for both entry-to-practice and advanced practice nursing. A Strengths-Based Nursing and health care approach is used in a variety of clinical settings. Emphasis is placed on bringing the best available evidence to nursing practice. Clinically relevant nursing challenges will be addressed in the choice of one of the two streams. Graduates of this program are eligible to write the OIIQ licensing exam.

Program Prerequisite

The completion of a Qualifying Year (QY) is mandatory before applying to Year 1 of the M.Sc.(Applied) in Nursing; Non-Thesis - Direct entry to Advanced Practice Nursing program.

This course of study is designed to prepare students to assume the full scope of Adult Care Nurse Practitioner practice. Adult Care Nurse practitioners provide advanced practice, including advanced-practice nursing care to the adult population with complex acute, chronic or critical health issues, requiring secondary and tertiary line of care. The program is built on a foundation of Strengths-Based Nursing care of individuals, families and communities.

Neonatal Nurse Practitioner (Gr. Cert.) (24 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Program credit weight: 24

Program Description

The Graduate Certificate in Neonatal Nurse Practitioner, in conjunction with the Graduate Diploma in Neonatal Nurse Practitioner, is intended for those entering the program with a Master's of Nursing. The program focuses on the multifaceted role of the neonatal nurse practitioner in a variety of acute, intermediate and critical neonatal care settings. Throughout the program, the emphasis is on advanced assessment, clinical reasoning, diagnosis and other skills to enact the full legislated scope of practice. The program is structured to focus on the ability to function as an educator, consultant, collaborator and leader. Students who complete the Neonatal Nurse Practitioner program are eligible to write the Ordre des infirmières et infirmiers du Québec's Neonatal Nurse Practitioner specialty (licensing) examination.

Pediatric Nurse Practitioner (Gr. Cert.) (27 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Program credit weight: 27

Program Description

The Graduate Certificate in Pediatric Nurse Practitioner is completed in conjunction with the Graduate Diploma in Pediatric Nurse Practitioner [for those entering the program with a Master of Nursing]. The program focuses on the multifaceted role of the pediatric nurse practitioner (PNP) in a variety of acute, intermediate and critical care pediatric settings. Emphasis on advanced assessment, clinical reasoning, diagnosis and other skills related to reflect the full legislated scope of PNP practice. The program is structured to focus on the ability to function as a clinician, educator, consultant, collaborator and leader. Students who complete the Pediatric Nurse Practitioner program are eligible to write the Ordre des infirmières et infirmiers du Québec's Pediatric Nurse Practitioner specialty certification examination.

Primary Care Nurse Practitioner (Gr. Cert.) (27 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Program credit weight: 27

Program Description

The Graduate Certificate in Primary Care Nurse Practitioner is open to nurses who have previously completed a Master of Science in Nursing and is taken in combination with the Graduate Diploma in Primary Care Nurse Practitioner. This program focuses on a wide range of acute and chronic health concerns across the life span and includes activities related to assessment, diagnosis and treatment within the primary care nurse practitioner's legally sanctioned scope of practice. Graduates may be eligible to be a candidate for the Ordre des infirmières et infirmiers du Québec's Primary Care Nurse Practitioner certification examination.

Adult Care Nurse Practitioner (Gr. Dip.) (30 credits)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Program credit weight: 30

Program Description

The Graduate Diploma complements the Master of Science(Applied) in Nurse Practitioner; Non-Thesis - Adult Care concentration and fulfills the requirements for entry-to-practice as an Adult Care NP as per the Ordre des infirmières et infirmiers du Québec (OIQ). The Graduate Diploma and the MSc(A) are taken concurrently by students entering the program with a Bachelor's Degree. Students entering the program already having completed a Master's in nursing degree take the Graduate Diploma and Graduate Certificate Nurse Practitioner - Adult Care concurrently. The admission requirements for this concentration are the same as those for our existing NP programs: a Bachelor's or Master's degree in Nursing (comparable to those offered at McGill); a minimum GPA of 3.2 on a scale of 4.0 in previous nursing studies; and 3360 hours of nursing experience in the specialty (i.e. acute adult

care). Please see the Executive Summary document for additional information.

Nursing (Ph.D.)

Offered by: Ingram School of Nursing (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D in Nursing focuses on the advancement of knowledge, practice, and education in Nursing.

A student who has obtained a master's degree at McGill University or at an approved institution elsewhere may, on the recommendation of the School, be registered in the second year of the Ph.D. program.

Each student's program is designed with the thesis supervisor taking into account the student's previous academic preparation, needs, and research interests.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

6 credits of courses at the 500 level or higher chosen in consultation with the thesis supervisor.

Becoming a Licensed Occupational or Physical Therapist

The Undergraduate programs in Physical and Occupational Therapy provide access to the professional master's programs in the same discipline. For more information on our graduate programs, refer to the School of Physical and Occupational Therapy's graduate section of the eCalendar, and the School website's graduate Occupational Therapy and Physical Therapy sections.

Licensing Regulations

Graduates who complete the Master of Science (Applied) in Occupational Therapy (M.Sc.A.OT.) or the Master of Science (Applied) in Physical Therapy (M.Sc.A.PT.) degree are eligible to seek licensure. Graduates from McGill may seek licensure worldwide. Each country, province, or state sets its own requirements for licensure which may necessitate examination, further course work, and/or the TOEFL. Those intending to practice occupational therapy or physical therapy within their borders must comply with special provincial or state licensing regulations.

Further information regarding Canadian requirements may be obtained from the offices of the associations listed under Professional Organizations below.

In order to practice occupational therapy or physical therapy in the province of Quebec, a permit must be obtained from the appropriate provincial regulatory body. Quebec law also requires that candidates seeking admission to the provincially recognized Quebec regulatory bodies must possess a working knowledge of the French language—i.e., be able to communicate verbally and in writing in that language. For further information, refer to Language Requirements for Professions.

Occupational therapists practising in Canada (except Quebec) are required to pass a National Certification Examination after graduation. For information, contact the *Canadian Association of Occupational Therapists* (refer to Professional Organizations below).

As of 1993, all Physical Therapy graduates who wish to practice in provinces in Canada (other than Quebec) are required to pass a Physiotherapy National Examination or provide proof of licensing

Program Accreditation

The Professional Master's program has received accreditation status by Physiotherapy Education Accreditation Canada.

The Occupational Therapy program is accredited by the Canadian Association of Occupational Therapists.

Student Evaluation and Promotion

Degree Requirements for the Master of Science (Applied) – Occupational Therapy (M.Sc.A.OT.), and the Master of Science (Applied) – Physical Therapy (M.Sc.A.PT.)

To enter professional practice, students must complete an M.Sc.A. in Occupational Therapy (OT) or Physical Therapy (PT). Therefore, graduates of the Bachelor of Science in Rehabilitation (OT or PT) must continue to the M.Sc.A.OT. or M.Sc.A.PT. programs to qualify for professional practice.

Students who graduate with the B.Sc. Rehab.Sc. degree with the required cGPA of 3.0 or better will be considered for acceptance into the same discipline of the Master of Science (Applied) program that commences in the summer following graduation. For full details, refer to the Rules and Regulations documents on the Master of Science (Applied) in Physical Therapy page.

Entry to the M.Sc.A.OT. or M.Sc.A.PT. requires students to have a minimum cGPA of 3.0. Even when the cGPA requirement is attained, the Occupational Therapy Promotions and Review Committee (OTPRC) or the Physical Therapy Promotion and Review Committee (PTPRC) may recommend that a student not be admitted to the Master's program if, during the Bachelor's program:

1. the student has had three or more documented performance deficiencies (flags), with or without probationary status; or
2. the student has not progressed sufficiently toward achievement of the required skills and attributes for entry to practice.

Students from McGill or elsewhere who do not hold the B.Sc.Rehab.Sc. - Major in Occupational or Physical Therapy degree must apply to the Master's program via a graduate Qualifying Year, or have the option to first apply to the undergraduate degree of B.Sc.Rehab.Sc. - Major in OT or PT and proceed to the M.Sc.A. degree in the same discipline.

For further details and other requirements, please refer to the Graduate and Postdoctoral Studies School of Physical and Occupational Therapy section. For complete admissions information, refer to mcgill.ca/spot/programs/admissions.

Student Evaluation and Promotion for M.Sc.A. in Occupational Therapy and Physical Therapy

Academic matters are the jurisdiction of the Occupational Therapy Promotion and Review Committee (OTPRC) or the Physical Therapy Promotion and Review Committee (PTPRC). The OTPRC and the PTPRC review the academic record, professional conduct, and general performance of students throughout the Occupational Therapy and Physical Therapy programs. It exercises final authority to determine a student's competence and suitability for the practice of occupational therapy or physical therapy and, hence, makes final decisions on all matters relating to promotion and graduation.

For complete rules and regulations regarding student promotions, along with the below resource documents, refer to the following School of Physical and Occupational Therapy program documents on the Master of Science (Applied) in Occupational Therapy page:

- Important Information for Students
- Rules and Regulations
- Curriculum
- Code of Conduct
- Essential Skills and Attributes
- Process-McGill's Office for Student Accessibility and Achievement
- Resources for learners

Students in Occupational Therapy or Physical Therapy must successfully complete a total of 30 credits in the Qualifying Year (QY) in Occupational Therapy or Physical Therapy, or have obtained the B.Sc.Rehab.Sc. - Major Occupational Therapy or Physical Therapy followed by 63 credits (OT Program) or by 62 credits (PT Program) in the corresponding M.Sc.A. degree. They must successfully complete all courses in the respective M.Sc.A. curricula and be in Satisfactory Standing to obtain the degree of M.Sc.A.OT. or PT.

Due to the sequential nature of the programs, the Occupational Therapy and Physical Therapy programs are full-time programs of study. Exceptions may be possible provided that students have obtained written permission from the Promotions and Review Committee to register part-time. Further information on the curriculum is available at mcgill.ca/spot/programs/ot/curriculum for OT curriculum or at mcgill.ca/spot/programs/pt/curriculum for PT curriculum.

Students enrolled full-time in the M.Sc.A.OT. or PT. program must complete all degree requirements within three years of the date of initial registration in this program. In the situation of part-time studies, degree requirements must be completed within five years of the date of initial registration. Please consult McGill's Graduate and Postdoctoral Studies page for Time Limitation Policy.

The School's assessment and promotions and review policies are multi-faceted, and under constant review by the School of Physical and Occupational Therapy. The School reserves the right to change rules and regulations at any time, although in general such changes will not come into effect in the middle of an academic year or promotion period. For complete information about the School's rules and regulations, refer to the Important documents at mcgill.ca/spot/programs/ot/master-science-applied-occupational-therapy and mcgill.ca/spot/programs/pt/professional-masters.

You must successfully complete all the requirements of each promotion period before being permitted to enter the next promotion period. In order to be promoted to the next promotion period, a student must successfully complete all professional courses in each promotion period, as well as all requirements for inter-professional education courses.

The required minimum passing grade is a B- (65%) for all courses with the designation of OCC1, PHTH, and POTH. As well, for any course with the designation of OCC1, PHTH, or POTH, which comprises both individual and group evaluations, or both theoretical and practical evaluations, each student must pass every component in order to receive a passing grade for the course (the minimum passing grade is a B- (65%)).

Note: Courses with a Subject Code OCC1, PHTH, or POTH are reserved for students enrolled in programs within the School of Physical and Occupational Therapy.

No evaluation, examination mark, etc. shall be considered final until approved by the OTPRC or the PTPRC and is recorded on the student's official transcript. Only final grades submitted on Minerva are the official McGill grades. *myCourses* (McGill's Learning Management system) is a tool but not the source for final grades.

For the purposes of evaluation, the curriculum is broken down into the following promotion periods:

QY (Qualifying Year):

- Promotion Period 1 Fall September–December
- Promotion Period 2 Winter January–April

M1 and M2 (Master Years 1 and 2):

- Promotion Period 1 M1 Summer May–August
- Promotion Period 2 M1 Fall September–December
- Promotion Period 3 M1 Winter January–April
- Promotion Period 4 M2 Fall—program completion (includes summer research project)

Failure Policy, Withdrawal, or Dismissal from the School of Physical and Occupational Therapy

When a student has failed one course, or one or more course components, or has been found to have been engaged in unethical or inappropriate conduct (i.e., unprofessional behaviour), the OTPRC or the PTPRC will automatically review the student's entire academic record and general performance.

A student will be withdrawn from the University, if the student fails two courses (i.e., two different courses, one failed course, plus a failed repeat of the same course or one failed course and a failed supplemental exam for that course). The student's transcript will thereafter indicate that the student was withdrawn from the University.

Failing a course in a Qualifying Year is equivalent to failing a course in a graduate program, and counts as a first failed course if a student is subsequently admitted to a graduate program in a related field. For full details, refer to the Failure Policy.

Academic offences such as plagiarism and cheating on examinations and unethical or inappropriate conduct are considered serious offences which could lead to dismissal from the program.

A student who engages in criminal activity and/or who is found guilty of having violated the criminal code will have their dossier referred to the OTPRC or the PTPRC; this may be considered evidence of unsuitability for the practice of occupational therapy or physical therapy and grounds for dismissal from the program.

The School has the right to dismiss, at any time, any student who is considered incompetent and/or unsuitable for the practice of occupational therapy or physical therapy.

Examinations

General Information

Please refer to the Policy on Assessment of Student Learning (PASL) (available on the Secretariat website) as well to the

Rules and Regulations document at mcgill.ca/spot/programs/ot/ /master-science-applied-occupational-therapy and mcgill.ca/spot/programs/pt/professional-masters and Academic Integrity, Standards of Behaviour and Code of Conduct, and Examination Facilities for Students with Disabilities.

Supplemental Examinations

Supplemental examinations may be permitted by the OTPRC or PTPRC and are examinations taken as a consequence of a failure or unsatisfactory outcome in a course. The timing of the supplemental examinations for failed Fall term and Winter term courses with the designation of OCC1, PHTH, or POTH will be determined by the course instructor and may be held within 30 days of the posting of final grades, if feasible, or during the official supplemental examination periods. It should be noted that the supplemental exam result will not erase the failed grade originally obtained and used in calculating the GPA. Both the original and supplemental exam marks will be calculated in the GPA and cGPA. For more information, please refer to Rules and Regulations at Occupational Therapy or Physical Therapy, and to Exams, as well as to Failure Policy in Graduate Studies.

Deferred Examinations

Deferred final examinations are examinations rescheduled because the original examination was missed for valid reasons. Deferring an exam is an exceptional measure and is meant to help students who are severely ill or dealing with unforeseeable, significant extenuating circumstances.

Students, who for serious reasons—such as valid health reason or family or personal crises—have not written one or more examinations, may receive the permission of the Program Director or delegate to defer the examination to the next deferred examination period. The student may be required to provide written documentation or additional information, as appropriate, before the deferral is approved. The Student Affairs Office and the Program Director or a delegate must be informed by the student as soon as possible after the examination of the reason for their absence from the examination, and the supporting documentation must be received no later than one (1) week after the examination date, as applicable. Please refer to details in Rules and Regulations at Occupational Therapy or Physical Therapy and to University Regulations and Resources.

Note: No supplemental examinations are available for students who did not receive the required passing grade in a course after writing a deferred examination.

Rehabilitation Science (Thesis) (M.Sc.) (45 credits)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Rehabilitation Science; Thesis program focuses on interdisciplinary research related to health and rehabilitation. The program provides training in the use of methodologies for knowledge synthesis and for designing and conducting research studies in rehabilitation. A major component of the program is the development and implementation of an individualized thesis project in a specialized

area of interest in health and rehabilitation (e.g., brain, education, global health, musculoskeletal, heart and lung, mental health and pain).

Physical Therapy (Non-Thesis) (M.Sc.A.PT.) (62 credits)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Degree: Master of Sci Appl, Phys Ther

Program credit weight: 62

Program Description

The M.Sc.(Applied) in Physical Therapy; Non-Thesis is to be completed in 1.5 graduate years over five semesters, and includes four clinical practica of 1,050 hours in total, leading to professional licensure to practice. The educational approach is consistent with adult learning, self-directed learning, reflective clinical practice, and inter-professionalism. Strong links between academic and clinical fieldwork education are emphasized. Emphasis is on client-centred and evidence-based practice across the lifespan and health care continuum, including health promotion from prevention of disability to rehabilitation. In addition to fieldwork, the program includes advanced clinical practice, research methodology, and educational methodology. The program may be completed in 61 or 62 credits.

Occupational Therapy (Non-Thesis) (M.Sc.A.OT.) (63 credits)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Degree: Master of Sci Appl, Occ Ther

Program credit weight: 63

Program Description

The Master of Science(Applied) in Occupational Therapy; Non-Thesis is a professional program that may lead to eligibility for licensure to practice as an Occupational Therapist. It is a 63-credit degree program that includes 1000 hours of fieldwork education over five semesters. The educational approach is consistent with adult learning and reflective clinical practice. The curriculum uses a case-based, problem-solving, self-directed approach across the lifespan. Strong links between academic and clinical fieldwork education are emphasized throughout the educational process. Focus on client-centered and evidence-informed practice, clinical reasoning, ethics

Required Courses (60 credits)

POTH 637	Cancer Rehabilitation.	3
POTH 638	Promoting Wellness of Seniors.	3
POTH 640	Role-Emerging Management.	3

¹ If selected, students must take both POTH 625D1 Design of Assistive Technologies: Principles. and POTH 625D2 Design of Assistive Technologies: Principles..

NOTE: Interprofessional Education Activities (IPEAs)

These required non-credit activities address the competencies for interprofessional practice across the health professions such as professional roles, communication, collaboration in patient-centered care, and conflict resolution. Students will be advised at the beginning of each term which activities they should register for.

Rehabilitation Science (Ph.D.)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Rehabilitation Science provides training and intensive experience in clinical research related to health and rehabilitation by asking the right questions through research design, analysis, interpretation and presentation of results. The program includes a comprehensive exam, research proposal, thesis and an oral defense.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Elective Courses (3-6 credits)

3-6 credits of School course offerings, at the 500, 600, or 700 level, that pertain to the student's area of specialization, to be chosen in consultation with the Graduate Program Director.

Driving Rehabilitation (Gr. Cert.) (15 credits)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Program credit weight: 15

Program Description

The Graduate Certificate in Driving Rehabilitation is a course-based program of 15 credits. The program focuses on the knowledge and skills necessary to offer the full spectrum (screening, evaluation, vehicle adaptation and training) of driving rehabilitation services to diverse client populations. The theoretical content is offered online with synchronous and asynchronous course activities, on a part-time basis, in combination with on-site training to integrate theory into practice. The program can be completed in 18 months to 2 years.

Required Courses (15 credits)

Expand allContract all

Course	Title	Credits
POTH 673	Screening for at Risk Drivers.	3
POTH 674	Assessing Driving Ability 1.	3

POTH 676	Adaptive Equipment and Driving.	3
POTH 677	Retraining Driving Skills.	3

Note: POTH 673 Screening for at Risk Drivers. and POTH 674 Assessing Driving Ability 1. are offered online, whereas POTH 675 Driving Assessment Practicum., POTH 676 Adaptive Equipment and Driving., and POTH 677 Retraining Driving Skills. have both online components and intensive workshops.

Chronic Pain Management (Gr. Cert.) (15 credits)

Offered by: Phys and Occ Therapy (Faculty of Medicine and Health Sciences)

Program credit weight: 15

Program Description

The Graduate Certificate in Chronic Pain Management is an interdisciplinary course-based program of 15 credits. The program focuses on a theoretical knowledge base in the most recent evidence-based neuroscientific and behavioural perspectives of chronic pain, advanced practice skills in the evaluation and assessment of chronic

pain conditions and how to manage clinical chronic pain conditions with an interdisciplinary perspective and the biopsychosocial approach. The program is offered online with synchronous and asynchronous course activities, on a part-time basis, and can be completed within 2.5 years.

Required Courses (12 credits)

Course	Title	Credits
POTH 603	Directed Practicum.	3
POTH 618	Topics in Rehabilitation.	3

or another 500-level or higher course (online or not) from a different university, as approved by the Graduate Certificate Program Chair.

NOTE: POTH 603 Directed Practicum. and POTH 618 Topics in Rehabilitation. are not online courses. They are directed tutorial courses that need pre-approval from the Graduate Certificate Program Chair. Students are encouraged to plan such courses with the instructor at least one semester before intended enrolment. For a complementary course at a different university, consult university regulation and resources for further information on transfer credits prior to enrolment.

Atmospheric and Oceanic Sciences (Thesis) (M.Sc.) (45 credits)

Offered by: Atmospheric & Oceanic Sciences (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science (M.Sc.) in Atmospheric and Oceanic Sciences is a comprehensive, research-driven program, focusing on topics related to climate dynamics, atmospheric chemistry, physical oceanography, weather forecasting, climate change impacts, air-sea interactions, and polar sciences. This program offers training on effective data collection, research methods, and the effective communication of scientific ideas. The program can be completed in the standard two years.

Thesis Courses (24 credits)

Expand allContract all

Course	Title	Credits
ATOC 691	Master's Thesis Literature Review.	3
ATOC 692	Master's Thesis Research 1.	6
ATOC 694	Master's Thesis Progress Report and Seminar.	3
ATOC 699	Master's Thesis.	12

Although registration is not required, students registered in M.Sc. programs are expected to regularly attend one of the student seminar series (ATOC 751D1 Seminar: Atmosphere and Ocean./ATOC 751D2 Seminar: Atmosphere and Ocean. or ATOC 752D1 Atmospheric, Oceanic and Climate Dynamics./ATOC 752D2 Atmospheric, Oceanic and Climate Dynamics.) and the Department seminar series during the entire period of their enrolment in the program.

Complementary Courses (21 credits)

Must complete or have completed the following courses or equivalent:

Expand allContract all

Course	Title	Credits

Biology (Thesis) (M.Sc.) (45 credits)

Offered by: Biology (Faculty of Science)

Degree: Master of Science
Program credit weight: 45

Program Description

The Master of Science in Biology is a research-focused program that encompasses a diverse range of topics in biology, from molecules and cells to organisms and ecosystems, including development, behaviour and evolution. Research themes include:

1. molecular, cellular and developmental biology,
2. conservation, ecology and evolution, and
3. neurobiology and behaviour.

This program allows students considerable flexibility in their choice of research and coursework and encourages cross-disciplinary thinking.

Biology (Thesis): Neotropical Environment (M.Sc.) (45 credits)

Offered by: Biology (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The McGill-STRI Neotropical Environment Option (NEO) is a research-based option for Masters students in the departments of Anthropology, Biology, Bioresource Engineering, Geography, Natural Resource Sciences, Plant Science, and Political Science at McGill University. NEO is aimed at students who wish to focus their graduate research on environmental issues relevant to the Neotropics and Latin American countries. NEO favors interdisciplinary approaches to research and learning through the participation of researchers from McGill and from STRI. Students will complete their research in Latin America and NEO's

core and complementary courses will be taught in Panama. NEO's educational approach seeks to facilitate a broader understanding of tropical environmental issues and the development of skills relevant to working in the tropics.

Whether applying to a Master or a PhD, students are expected to meet all the degree requirements of the department in which they are registered. In addition, NEO students will have to meet the specific requirements of the option.

Computer Science (Thesis): Bioinformatics (M.Sc.) (45 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science (M.Sc.) in Computer Science; Bioinformatics provides training in this interdisciplinary field, which lies at the intersection of biological/medical sciences and mathematics/computer science/engineering. The program includes the development of strategies for experimental design, the construction of tools to analyze datasets, the application of modelling techniques, the creation of tools for manipulating bioinformatics data, the integration of biological databases, and the use of algorithms, artificial intelligence, and statistics. The thesis must focus on bioinformatics in relation to computer science.

Thesis Courses (24 credits)

22 credits selected from:

Course	Title	Credits
COMP 691	Thesis Research 1.	3
COMP 696	Thesis Research 2.	3
COMP 697	Thesis Research 3.	4
COMP 698	Thesis Research 4.	10
COMP 699	Thesis Research 5.	12

Required Courses (3 credits)

Course	Title	Credits
COMP 616D1	Bioinformatics Seminar.	1.5
COMP 616D2	Bioinformatics Seminar.	1.5

Required Course

Course	Title	Credits
COMP 601	Thesis Literature Review.	2

Complementary Courses (18 credits)

6 credits chosen from the following courses:

Course	Title	Credits
BINF 621	Bioinformatics: Molecular Biology.	3
BMDE 652	Bioinformatics: Proteomics.	3
BTEC 555	Structural Bioinformatics.	3
PHGY 603	Systems Biology and Biophysics.	3

12 credits of 4-credit courses chosen from 500-, 600-, or 700-level Computer Science courses in consultation with the candidate's supervisor.

Note: Students with an appropriate background can substitute 4 credits by COMP 697 Thesis Research 3..

Computer Science (Non-Thesis) (M.Sc.) (45 credits)

Offered by: Computer Science (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The M.Sc. in Computer Science; Non-Thesis offers an in depth study of advanced topics in computer science, mainly through course-based work. The program includes the possibility to complete a short research project or to conduct an internship for practical experience.

Required Courses (2 credits)

Computer Science (Ph.D.)

Offered by: Computer Science (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Computer Science offers training in advanced research in a wide range of areas relevant to computer science under close supervision of research faculty.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Required Courses (4 credits)

Expand allContract all

Course	Title	Credits
COMP 604	Graduate School Fundamentals .	1
COMP 700	Ph.D. Comprehensive Examination.	0
COMP 701	Thesis Proposal and Area Examination.	3

Complementary Courses (6- 32 credits)

32 credits of graduate-level courses, excluding COMP 604, COMP 700, and COMP 701. Students with a master's degree in Computer Science or a related field are eligible for a course reduction by counting courses taken during their master's degree. Students must take a minimum of 6 credits of complementary courses at the graduate level from McGill after the course reduction. Course choice must be approved by the supervisor (or co-supervisor).

Computer Science: Bioinformatics (Ph.D.)

Offered by: Computer Science (Faculty of Science)

Degree: Doctor of Philosophy

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate

ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Additional courses at the 500, 600, or 700 level may be required at the discretion of the candidate's supervisory committee. Students who have completed the M.Sc.-level option in Bioinformatics must complete 6 credits of complementary courses not taken in the master's program.

Earth and Planetary Sciences (Thesis) (M.Sc.) (45 credits)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Earth and Planetary Sciences (Thesis) provides the opportunity to conduct research, and it focuses on a broad range of geological, Earth systems, and planetary science topics. Research may encompass natural physical and chemical processes across the age of the solar system, their interaction with life forms, and the impact of human activities on our environment. A major component of the program is an M.Sc. thesis that reports the main findings of the research. Research for the thesis typically begins in the first year of residence and is completed with mentorship from our faculty, in the second year of residence.

Thesis Courses (33 credits)

Four 3-credit 500-, 600-, or 700-level EPSC courses chosen with the approval of the supervisor or the research director and GPS.

Earth and Planetary Sciences (Ph.D.)

Offered by: Earth & Planetary Sciences (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

Highly qualified B.Sc. graduates may be admitted directly to the Ph.D. 1 year. Students with the M.Sc. degree are normally admitted to the Ph.D. 2 year.

* Students are required to take four graduate-level courses in the Ph.D. 1 year, and two courses plus a comprehensive oral examination in the Ph.D. 2 year.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

Geography (Thesis) (M.Sc.) (45 credits)

Offered by: Geography (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Geography; Thesis is a research-based program of 45 credits. The program provides the opportunity to conduct research, including field-based studies, focusing on the natural (i.e., biophysical) sciences and includes supervision by a faculty member. Research themes reflect the expertise and interests of current faculty members. A thesis, based on original research, is required.

Geography (Thesis): Neotropical Environment (M.Sc.) (45 credits)

Offered by: Geography (Faculty of Science)

Degree: Master of Science

Program credit weight: 45

Program Description

The Master of Science in Geography; Thesis – Neotropical Environment is a research-based program of 45 credits. The program is offered in collaboration with the Bieler School of Environment and the Smithsonian Tropical Research Institute (STRI- Panama). The program is focused on environmental issues relevant to the Neotropics and Latin American countries including thematic areas such as geography, environment, biology, agricultural sciences, sociology, and political science. The program favours interdisciplinary approaches to research and learning through the participation of researchers from McGill University and from STRI. Some research and teaching is conducted in Latin America and Panama. The thesis must be on a topic that relates to both the neotropical environment and geography.

Participation in the MSE-Panama Symposium presentation in Montreal is also required.

3 credits, at the 500 level or higher, on environmental issues to be chosen in consultation with and approval by the student's supervisor AND the Neotropical Environment Options Director.

Geography (Ph.D.)

Offered by: Geography (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

The doctoral degree in Geography includes the successful completion of the comprehensive examination, a thesis based on original research and coursework chosen in collaboration with the student's supervisor and/or research committee. The main elements of the Ph.D. are the thesis and comprehensive examination, a required Methods of Geographical Research course (3 credits), and a minimum of two complementary courses (6 credits). The Ph.D. in Geography also includes several options.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Psychology (Ph.D.)

Offered by: Psychology (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

All candidates for the Ph.D. degree must demonstrate broad scholarship, mastery of current theoretical issues in psychology and their historical development, and a detailed knowledge of their special field. Great emphasis is placed on the development of research skills, and the dissertation forms the major part of the evaluation at the Ph.D. level.

Ph.D. students in Clinical Psychology must fulfil similar requirements to Ph.D. students in the Experimental Program and must also take a

variety of specialized courses, which include practicum and internship experiences.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Psychology: Behavioural Neuroscience (Ph.D.)

Offered by: Psychology (Faculty of Science)

Degree: Doctor of Philosophy

Program Description

The Ph.D. in Psychology; Behavioural Neuroscience program emphasizes modern, advanced theory and methodology aimed at the neurobiological underpinnings of behaviour in human and non-human animals. This program is intended for graduate students in any area of Psychology who wish to obtain unique, intensive training at the intersection of psychology and neuroscience, thereby enhancing their expertise; the interdisciplinary potential of their dissertation research, and enabling them to compete successfully for academic or commercial positions in either field alone, or their intersection. It requires that students complete a dissertation that addresses Behavioural Neuroscience themes as determined by the graduate program director.

Thesis

A thesis for the doctoral degree must constitute original scholarship and must be a distinct contribution to knowledge. It must show familiarity with previous work in the field and must demonstrate ability to plan and carry out research, organize results, and defend the approach and conclusions in a scholarly manner. The research presented must meet current standards of the discipline; as well, the thesis must clearly demonstrate how the research advances knowledge in the field. Finally, the thesis must be written in compliance with norms for academic and scholarly expression and for publication in the public domain.

English for Professional Communication (Cert. Proficiency) (30 credits)

Offered by: Global & Strategic Comm.

Degree credit weight: 30

Program Description

This award-winning certificate program focuses on the English oral and written communication skills necessary to function effectively in a professional environment. The program is the equivalent to one year of full-time university study.

The program begins at the low-intermediate level. Students with a basic or an elementary knowledge of English will need to complete prerequisite courses before entering the program. The prerequisite courses do not count towards the program's 30 credits.

Students who begin the program at the Intermediate-2 or Intermediate-3 levels may take courses from the list of approved substitutions to complete 30 credits.

Students wishing to take extra courses may take courses from the list of complementary elective courses.

The program is offered three times a year: in Fall, Winter, and Summer for a period of 13 weeks. Courses are offered during the week and on Saturdays.

The program leads, under certain conditions, to the Certificate in Proficiency in English for Professional Communication.

Notes:

¹ Students who place lower than Intermediate-Low on the required placement test have the option to take 3 to 15 credits of the preparatory module (depending on their placement test score) to reach the entry level of the program.

² Students who begin their studies with courses CEEN 411 Advanced English 1: Reading and Writing ./CEEN 412 Advanced English 1: Listening and Speaking. are not eligible for admission to the Certificate of Proficiency – English for Professional Communication. However, these students may register as "Special Students" and may be eligible to receive the McGill Attestation of Proficiency in English if they successfully complete all four (4) courses of the Advanced module (CEEN 411 Advanced English 1: Reading and Writing ., CEEN 412 Advanced English 1: Listening and Speaking., CEEN 421 Advanced English 2: Reading and Writing ., and CEEN 422 Advanced English 2:Listening and Speaking.) with a minimum grade of B- (65%).

³ Students who begin their studies with courses CEEN 221 Intermediate English 2: Reading and Writing./CEEN 222 Intermediate English 2: Listening and Speaking. and who would like to be admitted to the Certificate of Proficiency – English for Professional Communication must take two approved substitutions (CEEN 401 English Vocabulary in Context. or CEEN 402 English Communication and Cultural Patterns. or CEEN 403 Strategic Communication in English. or CEEN 404 English Creative Non-fiction Writing.), or equivalent courses as approved by the Director, to satisfy the requirements of the program. These courses may be taken as part of the advanced module of the program. For more information, please contact the Global and Strategic Communication domain.

Students who begin their studies with courses CEEN 331 Intermediate English 3: Reading and Writing./CEEN 332

Intermediate English 3: Listening and Speaking. and who would like to be admitted to the Certificate of Proficiency – English for Professional Communication must take four approved substitutions (CEEN 401 English Vocabulary in Context. and CEEN 402 English Communication and Cultural Patterns. and CEEN 403 Strategic Communication in English. and CEEN 404 English Creative Non-fiction Writing.), or equivalent courses as approved by the Director, to satisfy the requirements of the program. These courses may be taken as part of the advanced module of the program. For more information, please contact the Global and Strategic Communication domain.

⁴ Students who would like to take extra courses to increase their target language contact hours may take courses from the list of additional electives.

French for Professional Communication (Cert. Proficiency) (30 credits)

Offered by: Global & Strategic Comm.

Degree credit weight: 30

Program Description

This award-winning part-time certificate program has been designed to enable students to master, in both oral and written French, the linguistic and communicative skills necessary to function effectively in a professional francophone environment.

The program is the equivalent of one year of full-time university studies, requires the completion of ten 3-credit courses, and starts at the low-intermediate level (courses CEFN 211 Functional French Grammar/Writing 1. and CEFN 212 French Communication Practice 1.). Students with a basic or an elementary knowledge of French will need to complete credit prerequisite courses before entering the program. Those credit courses won't be accepted as part of the Certificate. The overall program structure is divided into two modules:

1. The Preparatory Module comprises four prerequisite courses (one at the basic level and three at the elementary level) of 39 hours each.
2. The Intermediate and Advanced Credit Module consists of ten 3-credit courses of 39 hours each. It includes courses at the 200, 300, and 400 levels.

The program is offered three times a year: in Fall and Winter for a period of 13 weeks (Preparatory and Intermediate and Advanced Credit Modules). In Spring, both Modules last nine weeks. Courses are offered during the evening and on Saturday mornings.

Every student registered in a credit or non-credit course has exclusive access to online pedagogical material and other resources through the myCourses platform. This allows students to participate in virtual projects and/or reinforce their language training on an individual basis and at their own pace. The communication tools integrated in myCourses further consolidate the individual pedagogical support offered by the lecturer.

The program leads, under certain conditions, to the Certificate in Proficiency - French for Professional Communication (see "Academic Regulations"). The level of this certificate corresponds to the Advanced

Level recognized by the American Council on the Teaching of Foreign Languages (ACTFL). For information on term dates, please refer to the Department's website.

Indigenous Business Management (Cert.) (30 credits)

Offered by: Management and Entrepreneurship

Program credit weight: 30

Program Description

This tailored program is intended for Indigenous students as a result of the need expressed by the Indigenous community leaders. The twenty first century demands multidisciplinary individuals, teams, communities and organizations. This program introduces the knowledge and competencies essential to starting, promoting, and managing a socially relevant business or organization. It focuses on numerical and financial literacy, as well as fundamental communication and management skills. It will help develop the skills needed to create a business or effectively work in an established organization, create a business plan, develop projects, communicate with confidence, effectively manage internal and external stakeholders, understand the fundamentals of how organizations operate within a social, political, and legal framework, and negotiate and manage conflict.

Public Relations and Communication Management (Cert.) (30 credits)

Offered by: Global & Strategic Comm.

Program credit weight: 30

Program Description

The field of Public Relations and Communications Management has been changing dramatically in recent years. Digital (including social media) is changing the way public and organizations communicate. Increased consciousness by companies of their social responsibility, and a need for greater accountability to stakeholders, have led to an awareness in both the corporate and the not-for-profit sector that organizations need to rely on the advice and services of well trained professional communicators. The program content is continually updated with best practices in industry. Students have opportunities to discuss real and evolving public relations cases directly with industry professionals.

Aviation Leadership (Gr. Cert.) (24 credits)

Offered by: Management & Entrepreneurship

Program credit weight: 24

Program Description

Note: This program is not currently offered.

The Graduate Certificate in Aviation Leadership program focuses on developing leadership competencies for individuals who wish

to advance their careers in aviation. Participants will be exposed to innovative leadership practices, diverse workplace leadership, effective communication and negotiation, and data analytics. The Program uses a learner-centered instructional methodology, fostering a deeper understanding of aviation-related concepts and empowering learners to integrate what they have learned about leadership into immediate practice. Courses are also designed to focus on problem-solving skills and critical thinking. Courses incorporate aviation-related simulations, experiential activities, case studies, and guest speakers who are industry leaders with expertise in airlines, airports, air navigation, aerospace manufacturing, and other related areas.
